

KEMPER CONFIRMS SUCCESSFUL TEST OF ATMOFIZER TECHNOLOGY IMPROVING INDUSTRIAL FUME EXTRACTION

Secondary tests and commercialization to begin immediately

January 17, 2022, Vancouver, British Columbia – Atmofizer Technologies Inc. (the “Company” or “Atmofizer”) (CSE: ATMO) (Frankfurt: J3K) is pleased to announce the completion of initial tests by Kemper GmbH, a leading supplier a leading welding fume extraction equipment manufacturer and important supplier of ambient air cleaning systems to Fortune 500 clients.

Atmofizer has published a video of the test results [HERE](#).

[Click here to see test results video](#)

“We entered this partnership because we understand the Atmofizer technology and the impact it can have on the industry by greatly reducing the cost of filters and energy while delivering 99.99% performance. We are very excited to see the results and begin commercialization,” said Björn Kemper, CEO of Kemper GmbH.

“We are excited to demonstrate our technology in an industrial application because it is an extreme case. The test results are amazing and visually show the impact. Kemper is an amazing partner and we look forward to building the relationship and bringing solutions to market with them,” said Olivier Centner, CEO of Atmofizer.

“The air purification industry has largely focused on developing new filters that catch smaller particles. The challenge is that the tighter the filters the more energy is required to push air through and the most performant filters, HEPA are not recyclable or reusable so they end up in the landfills, said Centner. “Atmofizer’s technology works by using ultrasonic waves to agglomerate the smallest particles into larger clusters to more effectively filter and neutralize harmful particles using ultraviolet light. The mission of Atmofizer is to bring clean air and water to the world.”

About Atmofizer Technologies Inc.

Atmofizer’s consumer and industrial solutions are based on its patent-protected and patent pending technology for ultrafine particle agglomeration and neutralization. This capability creates a revolutionary and more efficient method for addressing the wide range of dangerous nano-scale particles, viruses and bacteria that are too small to be effectively managed by conventional HEPA filters and ultraviolet lights. Atmofizer plans to disrupt the air treatment industry by improving air safety and purification efficiency while lowering customers’ operational costs.

Atmofizing air refers to the process of using ultrasonic acoustic waves to agglomerate (cluster together) small particles into a larger target that is then radiated by ultraviolet light to neutralize their harmful properties, making the air you breathe less hazardous to your health. Using units that atmofize air in tandem with HEPA filters can make the HEPA filters work more efficiently, enable the use of a less-powerful filter and result in a cleaner and longer-lasting filter that reduces operating costs and is less of a health hazard to clean or replace.

Atmofizer is patent-pending and patent-protected sole source of technology to atmofize air and is applying its proprietary technology in consumer and industrial air purification products currently manufactured under the Atmofizer brand, as well as in retail and commercial devices produced by other companies that integrate Atmofizer technology into their own products under

license. Atmofizer's owned and licensed product lines include wearable, portable and mobile use for personal air treatment, as well as larger systems to handle higher air volumes for commercial, industrial, institutional and residential applications.

About Kemper GmbH

Kemper, the family business established in 1977, is a pioneer and technology leader in the field of welding fume extraction. The family owned Company Kemper is managed by the second generation: Björn Kemper, Michael Schiller and Frederic Lanz. Kemper employs 400 employees and is exporting to 88 countries. Kemper is the technology leader in the field of extraction and filtration technology in the metal working industry and their main objective is to supply the best possible quality and to fulfil the demands of our customers. Current customers include Bayer, Daimler, Airbus, Lufthansa, VW and Ford. For more information please visit; <https://www.kemper.eu/en/company>.

Forward-Looking Information

This press release contains "forward-looking information" within the meaning of applicable securities laws. All statements contained herein that are not clearly historical in nature may constitute forward-looking information. In some cases, forward-looking information can be identified by words or phrases such as "may", "will", "expect", "likely", "should", "would", "plan", "anticipate", "intend", "potential", "proposed", "estimate", "believe" or the negative of these terms, or other similar words, expressions and grammatical variations thereof, or statements that certain events or conditions "may" or "will" happen, or by discussions of strategy. The forward-looking information contained herein includes, without limitation, the testing collaboration with Kemper, the utilization of Atmofizer's technology industrial fume extraction devices and the business and strategic plans of the Company.

By their nature, forward-looking information is subject to inherent risks and uncertainties that may be general or specific and which give rise to the possibility that expectations, forecasts, predictions, projections or conclusions will not prove to be accurate, that assumptions may not be correct and that objectives, strategic goals and priorities will not be achieved. A variety of factors, including known and unknown risks, many of which are beyond our control, could cause actual results to differ materially from the forward-looking information in this press release including, without limitation: the Company's ability to comply with all applicable governmental regulations including all applicable laws and regulations; impacts to the business and operations of the Company due to the COVID-19 pandemic; a limited operating history, the ability of the Company to access capital to meet future financing needs; the Company's reliance on management and key personnel; competition; changes in consumer trends; foreign currency fluctuations; and general economic, market or business conditions.

Additional risk factors can also be found in the Company's continuous disclosure documents which have been filed on SEDAR and can be accessed at www.sedar.com. Readers are cautioned to consider these and other factors, uncertainties and potential events carefully and not

to put undue reliance on forward-looking information. The forward-looking information contained herein is made as of the date of this press release and is based on the beliefs, estimates, expectations and opinions of management on the date such forward-looking information is made. The Company undertakes no obligation to update or revise any forward-looking information, whether as a result of new information, estimates or opinions, future events or results or otherwise or to explain any material difference between subsequent actual events and such forward-looking information, except as required by applicable law.
