## Senator Minerals Expands 2017 Exploration Plan to Include Carter Lake Uranium Project.

**June 12th, 2017 - Senator Minerals Inc. (SNR—TSXV) (SNRAF—OTC) (T1KA—Frankfurt) ("Senator" or the "Company")** is pleased to announce that, as part of its due diligence of the acquisition of the Carter Lake Uranium Project, the Company has engaged Canexplor Management Ltd. to oversee a preliminary investigation of the property. The program will be comprised of an aerial survey as well as a radon gas collection grid, along the primary extent of the interpreted subsurface conductors. Radon gas is a daughter product of the decomposition of uranium and a specific indicator of the presence of radioactive materials.

The Carter Lake Uranium Project, which borders Purepoint/Cameco/AREVA's Hook Lake Project to the east, has basement depths estimated at between 400-500 metres, within the general discovery range of the McArthur River mine. The principal exploration target at Carter Lake is approximately 4.7 kilometres of subsurface conductive anomalies, identified in a 2006 MegaTEM survey and a 2008 VTEM survey, both completed by ESO Uranium Corp. The anomalies are interpreted as a conductive horizon, at or above the unconformity and which may be indicative of hydrothermal enrichment.

Senator is a junior mineral explorer focused on uranium exploration in northern Saskatchewan. Senator has entered into an agreement with an arm's-length vendor to acquire a 100-per-cent interest in the Patterson North East (PNE) uranium project, located on the east side of the Athabasca basin in Northern Saskatchewan, the most productive uranium-producing region in the world.
