Hi-View Resources CEO Robert Nick Horsley states, *“Gold prices are hitting all-time highs and copper is in high demand as a critical metal in the Green Energy Transition. We are well positioned and excited to continue our exploration in the prolific Toodoggone region following significant 2024 sampling discoveries on our Lawyers claim blocks next to the Amarc Resources AuRORA discovery.*

Neighboring Thesis Gold Inc. (“TAU”) recently raised \$10 Million by way of brokered private placement and will be actively drilling to expand their existing mineral resource of over 4 million ounces of Gold equivalent next to our 100% owned Golden Stranger property.

We are planning an active 2025 exploration season, focusing on both our newly acquired Babine Gold and Copper project and our Gold-Silver Projects in the prolific Toodoggone region. Furthermore, the Company will continue to look to acquire new exciting opportunities to add to its highly prospective portfolio of Gold and Copper exploration projects.”

Planning has commenced for a follow up exploration program on the Company’s 9,175 Hectare (“Ha”) Golden Stranger Project and Lawyers South, East and West claims located in British Columbia's prolific Toodoggone-Kemess porphyry Cu-Au region of north-central British Columbia (“Toodoggone”).

Hi-View’s properties are contiguous to Thesis Gold Inc. (“TAU”) Lawyers-Ranch project that has reported significant drilling intercepts and extensive continued drilling campaigns and currently hosts a Total Mineral Resource of 4.0 million ounces (Moz) gold equivalent (AuEq)^{1,2} (Measured and Indicated) at 1.51 grams per tonne (g/t) AuEq^{1,2} and 727,000 oz AuEq^{1,2} (Inferred) at 1.82 g/t Au Eq^{1,2} (See Thesis News Release dated September 5th 2024). To the Southeast, Hi-View’s properties are contiguous to Amarc’s JOY Copper-Gold district project that recently announced significant drilling discoveries at the Au-rich porphyry AuRORA Target (See Amarc News Release dated January 20th, 2025).

Quality Assurance and Control

The sampling program was undertaken by APEX personnel under the direction of Emily Laycock, M.Sc., P.Geo. A secure chain of custody is maintained in transporting and storing of all samples. Gold was assayed using a fire assay with atomic emission spectrometry and gravimetric finish when required (+10 g/t Au). Rock chip samples from outcrop/bedrock are selective by nature and may not be representative of the mineralization hosted on the project.
