2. BASIS OF PREPARATION

(a) Statement of Compliance

These unaudited condensed interim consolidated financial statements, including comparatives, have been prepared in accordance with International Accounting Standard 34 "Interim Financial Reporting" ("IAS 34") using accounting policies consistent with the International Financial Reporting Standards ("IFRS") issued by the International Accounting Standards Board ("IASB") and Interpretations of the IFRS Interpretations Committee.

These unaudited condensed interim consolidated financial statements do not include all of the information required of a full annual financial report and is intended to provide users with an update in relation to events and transactions that are significant to an understanding of the changes in financial position and performance of the Company since the end of the last annual reporting period. It is therefore recommended that these unaudited condensed interim consolidated financial statements be read in conjunction with the audited financial statements of the Company for the year ended June 30, 2023.

7. INVESTMENTS

(a) Simple Agreement for Future Equity (“SAFE”) Agreements

Pursuant to the terms of the SAFE Agreements, if there is an equity financing before the agreement expires or is terminated, the investee will automatically issue to the investors either: 1) the greater of: the number of Standard Preferred Shares equal to the Purchase Amount divided by the lowest price per share of the Standard Preferred Shares, or the number of SAFE Preferred Shares equal to the Purchase Amount divided by the SAFE Price or 2) in case the agreement specifies a discount rate, a number of shares of SAFE Preferred Stock equal to the Purchase Amount divided by the Conversion Price. The Conversion Price means either the SAFE Price or the Discount Price, whichever calculation results in a greater number of shares of SAFE Preferred Stock.

The SAFE Price means the price per share equal to the Valuation Cap or Post-Money Valuation Cap divided by the Company Capitalization. The Discount Price means the price per share of the Standard Preferred Stock sold in the equity financing multiplied by the Discount Rate.

If there is a liquidation event, such as a change of control, direct listing or an initial public offering, before the expiration or termination of the SAFE Agreement, the investor will at its option either: 1) receive a cash payment equal to the purchase amount or 2) automatically receive from the investee a number of shares of common stock equal to the purchase amount divided by the liquidity price, if the investor fails to select the cash option.

Alternatively, the investor will automatically receive a portion of Proceeds, due and payable to the investor, equal to the greater of the Purchase Amount or the amount payable on the number of shares of Common Stock equal to the Purchase Amount divided by the liquidity price. Thereafter the SAFE Agreement will terminate. In connection with a cash payment through a liquidity event, if there are not enough funds to pay the investors and holders of the SAFE Agreements in full, funds will be distributed pro-rata and based on the purchase price and the remaining amounts will be covered with common stock equal to the remaining unpaid purchase price divided by the liquidity event. In a dissolution event, SAFE Agreement holders will be paid out of remaining assets prior to holders of the investee’s capital stock.

While this illustrates the overall effect of changing the values of the unobservable inputs by a set percentage, the significance of the impact and the range of reasonably possible alternative assumptions may differ significantly between investments, given their different terms and circumstances.

The sensitivity analysis is intended to reflect the uncertainty inherent in the valuation of these investments under current market conditions, and its results cannot be extrapolated due to non-linear effects that changes in valuation assumptions may have on the fair value of the investments.

13. FINANCIAL INSTRUMENTS

(a) Fair value information

As at December 31, 2023, the Company's financial instruments consist of cash, tax receivables, convertible note receivable, loan receivable, investments, accounts payable and loans payable. The carrying values of receivables, accounts payable and loans payable approximate their fair values because of their current nature. All financial assets and financial liabilities are recorded at fair value on initial recognition.

The categories of the fair value hierarchy that reflect the significance of inputs used in making fair value measurements are as follows:

Level 1 Unadjusted quoted prices in active markets that are accessible at the measurement date for identical, unrestricted assets or liabilities;

Level 2 Quoted prices in markets that are not active, or inputs that are observable, either directly or indirectly, for substantially the full term of the asset or liability;

Level 3 Prices or valuation techniques that require inputs that are both significant to the fair value measurement and unobservable (supported by little or no market activity);

There were no transfers between levels during the six months period ended December 31, 2023 and during the year ended June 30, 2023.

Where the fair values of investments in private companies recorded on the unaudited condensed interim consolidated statements of financial position cannot be derived from active markets, they are determined using a variety of valuation techniques. The inputs to these models are derived from observable market data where possible, but where observable market data is not available, judgment is required to establish fair value.

The following is an analysis of the Company's financial assets and liabilities measured at fair value as at December 31, 2023:

14. DIGITAL ASSETS AND RISK MANAGEMENT

Digital assets and risk management

Cryptocurrency held by the Company is measured using Level 1 fair values, determined by taking the rate from <https://ca.finance.yahoo.com/>. Digital asset prices are affected by various forces including global supply and demand, interest rates, exchange rates, inflation or deflation and global political and economic conditions. A decline in the market prices for digital assets could negatively impact the Company's future operations. The Company has not hedged the conversion of any of its sales of digital assets.

Digital assets have a limited history and the fair value historically has been relatively volatile. Historical performance of digital assets is not indicative of their future price performance.

The Company's digital assets currently consist of Bitcoin, Ethereum and NFTs. As at December 31, 2023, if the market price of digital currencies increased or decreased by 10% with all other variables held constant, the corresponding digital assets value increase or decrease respectively would amount to approximately \$11,395 (June 30, 2023 - \$5,172).

Liquidity Risk

As at December 31, 2023, the Company held cash of \$125,492 (June 30, 2023 - \$790,514), had working capital of \$120,403 (June 30, 2023 - \$704,056). At December 31, 2023 and June 30, 2023, the Company expects that it will be able to meet its obligations.

Interest Rate Risk

Interest rate risk is the result that the fair values and future cash flows of the Company's financial instruments will fluctuate because of changes in market interest rates. The Company was not exposed to significant interest rate risk as loans payable were at fixed interest rates with short-term maturities.

Currency Risk

The Company is from time to time, exposed to currency risk related to certain accounts payable and accrued liabilities and other payable amounts which were denominated in USD. As at December 31, 2023, there were USD Nil (June 30, 2023 – USD Nil) liabilities denominated in USD.

Credit Risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations. The Company was mainly exposed to credit risk from holding cash, which it mitigates from holding balances with major financial institutions.

Other Price Risk

Other price risk is the risk that the fair value or future cash flows of a financial instrument will fluctuate due to changes in market prices, other than those arising from interest rate risk and foreign currency risk. The Company holds investments in securities that will fluctuate in value as a result of fluctuations in estimated fair values of those securities. Furthermore, as the Company's investments are early-stage Web 3.0 development companies, market values will fluctuate subject to economic cycles and political events.
