

## Great Eagle Files National Instrument 43-101 Technical Geological Report on its North Shore Gold Property

Burnaby, BC – March 17<sup>th</sup>, 2025 – Great Eagle Gold Corp. ("Great Eagle") (CSE: GEGC | OTC: GEGCF | FRA: GI8) is pleased to announce that it has filed a National Instrument (NI) 43-101 Technical Report in regards to the North Shore Gold Property (the "Report") on Sedar Plus. The Report is titled "NI 43-101 Technical Report, Mineral Resource Estimate Update on the Northshore Gold Property, Priske Township, Ontario, Canada" dated March 13, 2025 with an effective date of March 13, 2025 and has been co-authored by Michael Dufresne, M.Sc., P.Geol., P.Geo., Gerald Holmes, B.Sc., P.Geo., and Rob L'Heureux, M.Sc., P.Geol., all from APEX Geoscience Ltd. (APEX).

The Report discloses the following mineral resource estimate (MRE) on the three patented claims that make up the North Shore Property, which Great Eagle has recently acquired from Newpath Resources Inc. (Newpath). The MRE is as follows:

### Northshore Inferred Mineral Resource Estimate (Effective March 13, 2025)

Cut Off Grade (g/t Au)	Tonnes	Grade (g/t Au)	Total Au Ounces	Category
0.35	7,643,000	1.07	264,000	Inferred*

#### \*Notes:

1. The mineral resources have been classified according to the Canadian Institute of Mining (CIM) Definition Standards for Mineral Resources and Mineral Reserves (May 2014) and CIM Estimation of Mineral Resources & Mineral Reserves Best Practices Guidelines (2019).
2. Inferred Mineral Resources are not Mineral Reserves. Mineral resources which are not mineral reserves do not have demonstrated economic viability. There has been insufficient exploration to define the inferred resources tabulated above as an indicated or measured mineral resource, however, it is reasonably expected that the majority of the Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration. There is no guarantee that any part of the mineral resources discussed herein will be converted into a mineral reserve in the future. The estimate of mineral resources may be materially affected by environmental, permitting, legal, marketing, or other relevant issues.
3. Resource estimation was conducted by Mr. David Briggs, NHD, Pr.Sc.Nat., of RockRidge Partnership and Associates under the supervision of Mr. Michael Dufresne, M.Sc., P.Geol., P.Geo of APEX Geoscience Ltd. of Edmonton, Alberta with an effective date of March 13, 2025.
4. Mr. Dufresne, M.Sc., P.Geol., P.Geo. of APEX Geoscience Ltd., who is a qualified person as defined by NI 43-101, is responsible for the completion of the updated mineral resource estimate.
5. The recommended reported inferred mineral resources have been constrained within an optimized pit shell. The economic assumptions used for the pit optimization included US\$2,100/oz Au, process recoveries of 95% Au, a US\$2.50/t mining cost, a US\$15/t processing cost, and a US\$4.5/t G&A cost.
6. The Mineral Resource cut-off grade of 0.35 g/t Au was chosen to capture mineralization that is potentially amenable to open pit mining. The reported resources occur in bodies of sufficient size and continuity to meet the requirement of having reasonable prospects for eventual economic extraction within an optimized pit shell.
7. Numbers may not add due to rounding.

The 2025 Current MRE for the Northshore Gold Property is based on drilling conducted from 1990 through 2021 and supersedes the 2022 Northshore MRE (Dufresne and L'Heureux, 2022). Since the 2022 estimate, no new drilling or material information has been added. Therefore, the 2025 Northshore MRE uses the same dataset, exploratory data analysis (EDA), and block model as the 2022 estimate but is restated with updated Reasonable Prospects for Eventual Economic Extraction (RPEEE) constraints.

As part of Great Eagle Gold's commitment to maintaining the highest technical and compliance standards, the company engaged APEX Geoscience Ltd. to conduct an independent site assessment and technical review of the Northshore Gold Property. Andrew Fletcher, CEO & President of Great Eagle Gold, stated: "Engaging Mike Dufresne and the APEX Geoscience team for this technical review was a strategic decision that aligns with our vision for excellence in

digital gold mining. APEX's proven expertise in mineral resource estimation and NI 43-101 compliance, along with their prior work on the Northshore Gold Property, made them the ideal technical partner. Their involvement further reinforces our commitment to upholding the highest industry standards, ensuring accuracy, and maintaining full compliance in all technical reporting."

### **About Great Eagle Gold Corp.**

Great Eagle Gold Corp. (CSE: GEGC) (OTC Pink: GEGCF) (FSE: GI8) is a publicly traded Canadian company, also listed in the United States and Germany, leading the gold resource supply side of NatGold Digital Ltd.'s revolutionary, patent-pending digital gold mining ecosystem. This innovative approach redefines how gold's value is captured through tokenization—eliminating extraction and its environmental, social, and financial costs through a blockchain-powered, eco-friendly digital mining process.

Great Eagle's strategy is uniquely focused on the supply side of the NatGold ecosystem. By acquiring gold resources that qualify as Certified NatGold Resources™, in accordance with NatGold Digital's strict token certification standards, Great Eagle is establishing itself as a key player in this transformative industry—operating at the intersection of three major global investment trends: gold, ESG investing, and the tokenization of real-world assets.

### **Quality Assurance and Quality Control**

Samples were analyzed at ALS Global Laboratories (Geochemistry Division) with sample preparation at Thunder Bay and geochemical analyses conducted in Vancouver, Canada (ALS is an ISO/IEC 17025:2017 and ISO 9001:2015 accredited facility). A secure chain of custody is maintained in transporting and storing of all samples. At ALS the samples were fire assayed using a 50g sample aliquot and then concentration for Au was determined by Atomic Absorption (AA) under the ALS code AuAA24. Multielement geochemistry was conducted using a 4 acid digestion followed by ICP-AES using ALS method ME-ICP61. The Company follows industry standard procedures for the work carried out on the Project. Due to the reconnaissance nature of the sampling the Company relied on the internal quality assurance quality control ("QA/QC") measures of ALS. No significant QA/QC issues during review of the data.

### **Qualified Person**

Lawrence Segerstrom, CPG, a Director of Great Eagle, and a Qualified Person as defined in National Instrument 43-101, Standards of Disclosure for Mineral Projects, has approved the scientific and technical disclosure in this news release.

***Neither the Canadian Securities Exchange (the "CSE") nor the Market Regulator (as that term is defined in the policies of the CSE) accepts responsibility for the adequacy or accuracy of this news release.***

*This news release includes certain statements that may be deemed "forward-looking statements" within the meaning of applicable Canadian securities legislation. Forward-looking statements include, but are not limited to statements with respect to the acquisition of NI 43-101 gold resources, the ability to digitally mine NatGold coins, the viability of the NatGold tokenization*

*and monetization ecosystem, and development plans, expansion plans, estimates, expectations, forecasts, objectives, predictions and projections of the future. Specifically, this news release contains forward looking statements with respect to Great Eagle's proposed operations, acquiring and developing gold resources and their tokenization, and the receipt of required approvals. Generally, forward-looking statements can be identified by the forward- looking terminology such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "projects", "intends", "anticipates", or "does not anticipate", or "believes", or "variations of such words and phrases or state that certain actions, events or results "may", "can", "could", "would", "might", or "will" be taken", "occur" or "be achieved". Forward-looking statements are subject to known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of Great Eagle to be materially different from those expressed or implied by such forward-looking statements, including but not limited to: risks related to the exploration and development and operation of Great Eagle's projects, the actual results of current exploration, development activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, future precious metals prices, as well as those factors discussed in the sections relating to risk factors of our business filed in Great Eagle's required securities filings on SEDAR+. Although Great Eagle has attempted to identify important factors that could cause results to differ materially from those contained in forward- looking statements, there may be other factors that cause results to be materially different from those anticipated, described, estimated, assessed or intended.*

*The forward-looking statements contained in this news release are made as of the date of this news release. Except as required by law, the Company disclaims any intention and assumes no obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as required by applicable securities law. Additionally, the Company undertakes no obligation to comment on the expectations of, or statements made, by third parties in respect of the matters discussed above.*
