THC BioMed Orders Biodegradable Filters for its Automated Pre-Rolls

THC.CSE

THCBF – OTC

TFHC.F

VANCOUVER, June 19, 2019 /CNW/ - THC BioMed Intl Ltd. ("**THC BioMed**", or the "**Company**") (CSE: THC) is pleased to announce that has placed an order for biodegradable filters for its automated pre-rolls.

The filters are natural, rapidly degrading and commercial-quality, using raw materials that include flax, cotton, and manila hemp with no artificial compounds.

The manufacturer advises that the average time for degradation of these patented filters is 3 days in compost or 2 minutes when dispersed in water at 150 rpm agitation. In comparison, it can take up to 15 years for common acetate filters to degrade.

The filters are designed to comply with single-use plastic bans, which are already in place in Europe, are coming into effect in Vancouver B.C. in 2020 and are being discussed for eventual adoption in other parts of Canada.

THC clarifies the filters are there only for convenience purposes to stop loose cannabis from going into a user's mouth.

THC will in due course submit an application for product approval and be subject to the 60-day notice of new cannabis product becoming available for sale, which is required pursuant to Appendix I of Canada's updated *Cannabis Licence Management Guide*.

About THC

THC BioMed is a *Cannabis Act* Licensed Producer and Canada's largest supplier of legal Cannabis Genetics. THC BioMed is on the leading edge of scientific research and the development of products and services related to the medical cannabis industry.
