

Form 51-102F3
Material Change Report

Item 1 Name and Address of Company

Expedition Mining Inc.
Suite 600, 595 Howe Street
Vancouver, B.C. V6C 2T5

Item 2 Date of Material Change

September 24, 2013

Item 3 News Release

A News Release was issued in Vancouver, British Columbia on September 24, 2013 and distributed through Marketwire.

Item 4 Summary of Material Change

See the attached news release.

Item 5 Full Description of Material Change

See the attached news release.

Item 6 Reliance on subsection 7.1(2) or (3) of National Instrument 51-102

N/A

Item 7 Omitted Information

N/A

Item 8 Executive Officer

Contact: Ron Atlas, President & Chairman of the Board or
 William Galine, Executive Vice President
Telephone: (604) 662-3903

Item 9 Date of Report

September 24, 2013

EXPEDITION MINING COMMENCES TRENCHING PROGRAM ON LONG CANYON GOLD PROPERTY

Vancouver, British Columbia, September 24, 2013 – Expedition Mining Inc. (TSX-V: EXU) (the "Company") is pleased to provide this update on the 2013 exploration programs within the Walker Lane Mineral Belt.

LONG CANYON PROPERTY

This property consists of 37 unpatented lode claims located 200 kms southeast of Reno and 16 kms southeast of the community of Mina, Nevada. Previous rock sampling has returned gold values up to 1.7 g/t over 3 m, and up to 9.7 g/t gold and 529 g/t silver in grab samples, and soil samples of over 1.0 g/t gold. The property hosts an extensive siliceous zone containing strongly anomalous mercury (to 155,000 ppm), antimony (to 987 ppm) and arsenic (to 2790 ppm) values.

Structurally the Long Canyon project area is dominated by strands of the northwest trending Walker Lane Fault Zone. Arcuate splays from the main faults trend east-west across the property and are exposed in many of the drainages. The northerly trending structures extend through the Pilot Mountains to the north, and are covered by pediment fans to the south. The intersections of these structural zones are believed to be important localizing features for the mineralization encountered at the Bellville Mine and the deposits in the Douglas Camp.

Exploration programs carried out by the Company have identified several structural trends associated with multi-element soil anomalies. These structural zones trend dominantly north-northeast and northwest, and intersect beneath the siliceous zone which occupies the central portion of the property. The north-northeast trend is characterized by swarms of narrow quartz veins with a general northerly orientation and subvertical dip. These veins range from <1 cm to greater than 1 m in thickness. At least two of these NNE zones have been identified to date. Veins within the NW trending zone show a greater variation in dip attitude from -45 to vertical, and are generally oriented sub-parallel to the overall Walker Lane belt.

Compilation of the results of the Expedition programs with the historical IP data has shown that the zones of structural intersections correlate with the IP anomalies and with the multi-element soil geochemical anomalies. These areas have been chosen for the initial trenching program. Approximately 250 m (800 feet) of trenching are planned for six trenches. The trenches will be oriented perpendicular to the dominant structural trend in order to maximize exposure of the vein systems.

The Long Canyon project is situated in southeastern Mineral County and is flanked by several well known historical mining districts. The Pilot Mountains to the north have a long history of mercury production, followed by tungsten mining along the eastern edge of the range. The former producing Belleville Mine 8 kms north of Long Canyon reportedly produced around 100,000 ozs to 1939 from two quartz veins.

To the west, the Douglas Camp area was dominantly a gold and silver camp which also contained abundant scheelite and produced over \$1,000,000 of tungsten during and after WW I.

To the southwest, the Candelaria District was known for high grade silver deposits which averaged 60 oz/ton in the early days of mining. By 1999 over 68 million ounces of silver had been extracted from the mines in this district.

Expedition's disclosure of a technical or scientific nature in this press release has been reviewed and approved by James Chapman P.Geo, who serves as a qualified person under the definition of National Instrument 43-101.

Expedition Mining Inc. (TSX-V: EXU) is a publicly held Canadian exploration company focused on acquiring, exploring and developing gold properties located in favourable geo-political climates. The company is led by a highly skilled, experienced board and management team with significant successes in managing early stage mineral exploration companies. For additional information concerning Expedition Mining Inc. or its various exploration projects please visit Expedition's website at www.expeditionmining.com.

CAUTION REGARDING FORWARD LOOKING STATEMENTS:

This news release contains "forward-looking statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995 and applicable Canadian securities legislation. Generally, these forward-looking statements can be identified by the use of forward-looking terminology such as "plans", "expects" or "does not expect", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates" or "does not anticipate", or "believes", or variations of such words and phrases or state that certain actions, events or results "may", "can", "could", "would", "might" or "will be taken", "occur" or "be achieved". Forward-looking statements are subject to known and unknown risks, uncertainties and other factors that may cause the actual results, level of activity, performance or achievements of Expedition Mining to be materially different from those expressed or implied by such forward-looking statements, including but not limited to: risks related to the exploration and potential development of the properties, the actual results of current exploration activities, conclusions of economic evaluations, changes in project parameters as plans continue to be refined, future prices of gold. Although Expedition Mining has attempted to identify important factors that could cause actual results to differ materially from those contained in forward-looking statements, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. Expedition Mining does not undertake to update any forward-looking statements that are incorporated by reference herein, except in accordance with applicable securities laws.

ON BEHALF OF THE BOARD:
