NEWS RELEASE

US AIR FORCE and MARINE CORPS PURCHASE VALDOR PRODUCTS

Hayward, California – March 21, 2012: Valdor Technology International Inc. ("Valdor") (TSX-V: VTI) is pleased to report that two US military bases, representing the US Air Force and US Marine Corps, have purchased Valdor IMT Kits and Connectors. These military bases are also evaluating repair and cable extension applications for the Valdor Omega Enclosure. The Omega Enclosure is designed to contain up to 48 cable connections incorporating its unique miniature SP connectors; it is the highest-density enclosure on the market. The Valdor products will be used for upgrading and enhancing infrastructure on these bases in conventional and harsh environment applications.

About the Fiber Optics Industry: Fiber optics is the future of communications and fiber optic connectors are one of the major profit centres within this market. The signal transmission business is in the early stages of a fiber optics bull market. All signal transmission, in their many and various forms, are being converted from electrical, using copper wire and coaxial cable, to fiber optics. In the USA, the Obama administration has recently pledged US\$7.2-billion for 100 million Americans to have access to super high speed internet. This high speed internet will require significant fiber optic infrastructure. An increase in demand for shorter optical links is fueling the market for fiber-optic connectors and mechanical splices, according to ElectroniCast Consultants (www.electronicast.com). Demand for high speed access is bringing fiber closer to end users. Demand for shorter links, where connectors represent a substantial share of the total installation cost, is accelerating. According to Stephen Montgomery, president of ElectroniCast, "Worldwide multimode connector consumption value is forecast to nearly double during the 2010-2015 timeframe." ([Lightwave Online Article](#)).

About Valdor Technology International Inc. (www.valdortech.com): Valdor is a high technology fiber optic components company specializing in the design and manufacture of new generation fiber optic connectors, enclosures, laser pigtails and other optical and optoelectronic components using its proprietary and patented Impact Mount™ and HeptoPort™ technologies. The Impact Mount™ technology incorporated in the Valdor line of connectors is user friendly and environmentally friendly. This technology is all-mechanical with no epoxy or index matching gel required. The Impact Mount™ technology field installable termination kits and connectors are ideal for harsh environment applications and quick repair in the field. Valdor holds several patents on its connector technology in strategic global regions.
