### Golden Cariboo Initiates Mobile Metal Ion (MMI) Soil Sampling at Halo Zone New Discovery Area

September 17, 2024

Vancouver, Canada – Golden Cariboo Resources Ltd. (the “Company”) (CSE:GCC) (OTC:GCCFF) (WKN:A402CQ) (FSE:3TZ) wishes to announce the mobilization of field crews to the Quesnelle Gold Quartz Mine property to undertake a Mobile Metal Ion (MMI) soil geochemistry survey. MMI is a methodology of soil geochemistry which is known to be capable of detecting buried mineral deposits ([see SGS website for further information](#)).

An approximately 12 line kilometer survey is planned to cover the area surrounding the Halo zone discovery which recently drilled 136.51 m of 1.46 g/t gold near surface ([see News Release dated September 10, 2024](#)), as well as the areas surrounding the North Hixon zone and the historic Quesnelle Quartz Mine. The purpose of the survey is to help delineate the northwest-trends of gold mineralization from these zones, as well as to test for further parallel trends on the property.

David Mark, P.Geo., Principal of Geotronics Consulting Inc. commented “MMI is an advanced soil sampling technique that has the ability to work in areas with a variety of soil types and at-depth targets, which makes this an ideal method to advance exploration on the Quesnelle Gold Quartz Mine property. Using MMI can be effective in both delineating areas of known mineralization as well as generating targets at the property-scale”.

The technical information in this news release has been reviewed by Dr. Sarah Palmer, P.Geo., a qualified person with respect to NI 43-101.

#### About Golden Cariboo Resources Ltd.

Golden Cariboo Resources Ltd. is rediscovering the Cariboo Gold Rush by proceeding with highly targeted drilling and trenching programs on its Quesnelle Gold Quartz Mine property which is almost fully encircled on 3 of 4 sides by Osisko Development (NSE-ODV/TSXV-ODV). Historically, over 101 placer gold creeks on the 90 km trend from the Cariboo Hudson mine north to the Quesnelle Gold Quartz Mine property have recorded production and successful placer mining continues to this day.

Golden Cariboo’s Quesnelle Gold Quartz Mine property is 4 km northeast of, and road accessible from, Hixon in central British Columbia. The Project includes the Quesnelle Quartz gold-silver deposit, which was discovered in 1865 in conjunction with placer mining activities. Hixon Creek, which dissects the old workings, is a placer creek which has seen small-scale placer production since the mid 1860s.
