DESCRIPTION OF BUSINESS AND REVIEW

Grand Peak is a Canadian junior capital company that has completed its continuation from the jurisdiction of Yukon to British Columbia. Effective as of April 27, 2010, the Company is registered in British Columbia under the Business Corporations Act.

Grand Peak is engaged primarily in investing in small capital resource sector public companies. The focus is on increasing the Company's value to the benefit of its stakeholders. Accordingly, its financial success may be dependent upon the extent to which it can develop its investments and the economic viability of developing any additional investment portfolios.

Management of Grand Peak is actively looking for opportunities for investment. The team has experience evaluating and financing investment projects and anticipates expanding the Company's activities in the near future.

GOING CONCERN

The financial statements for the three- and nine-month periods ended June 30, 2016 have been prepared on the basis that the Company will continue as a going concern, which assumes the realization of assets and settlement of liabilities in the normal course of business. The appropriateness of the going concern assumption is dependent upon the Company's ability to generate future profitable operations and/or generate continued financial support in the form of equity or other financings.

Management feels that sufficient working capital will be obtained from public share offerings and the sale of marketable securities to meet the Company's liabilities and commitments as they come due. The financial statements do not reflect any adjustments to the carrying values of assets and liabilities and the reported expenses and balance sheet classification that would be necessary if the going concern assumption were not appropriate and such adjustments could be material.

On June 7, 2011, the Company signed an agreement with Musgrove Mineral Corp. and acquired a 100% interest in the Vianey mining concessions located in Guerrero State, Mexico.

On May 24, 2013, and as amended on January 16, 2014, the Company entered into an option agreement with Lucky Minerals Inc. ("Lucky"), a company with a common director then, to grant Lucky a 100% interest in the Company's Vianey's mining concessions.

Under the agreement, Lucky was required to make payments according to a schedule and incur the minimum required expenditures. During the year ended September 30, 2015, Lucky decided to let the option agreement lapse as they were unable to meet the exploration expenditure requirement due by December 1, 2014. The Company has since regained control of the mining concessions.

On July 15, 2016, the Company entered into an option agreement to option Vianey mining concessions to an arms-length party (the "Optionee") for a total of $300,000 with the following payment schedule:

The Optionee shall commit to a work program of not less than $250,000 over the next two years and the Company shall retain a 2% net smelter royalty ("NSR"). The Optionee may acquire 1% of the NSR for a price of $1,000,000.

The Company received the first $100,000 cash payment near the end of July 2016.

Investment Gains (Losses)

Realized investment gains or losses are a recurring element in the Company's revenues and net earnings. Realized investment gains or losses may fluctuate significantly from period to period, with a meaningful effect upon the Company's consolidated net earnings. However, the amount of realized investment gain or loss for any given period has no predictive value, and variations in amount from period to period have no practical analytical value.

SUBSEQUENT EVENTS

See Mineral Property section, and Note 7 of the condensed interim consolidated financial statements for the three and nine months ended June 30, 2016.

FINANCIAL RISK MANAGEMENT

The Company is exposed in varying degrees to a variety of financial instrument related risks. The Board of Directors approves and monitors the risk management processes, inclusive of documented investment policies, counterparty limits, and controlling and reporting structures.

The type of risk exposure and the way in which such exposure is managed is provided as followings:

Credit Risk

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss. The Company's credit risk is primarily attributable to cash and cash equivalents, accounts and GST receivables and investment. The majority of cash is deposited in bank accounts held with major banks in Canada. As most of the Company's cash is held by one bank, there is a concentration of credit risk. This risk is managed by using major banks that are high credit quality financial institutions as determined by rating agencies. The Company's another exposure to risk is on its other receivables. This risk is minimal as receivables consist primarily of refundable government goods and services taxes and from a related company. All transactions executed by the Company in listed securities are settled or paid for upon delivery using approved brokers. The risk of default is considered minimal, as delivery of securities sold is only made once the broker has received payment. Management believes that the credit risk concentration with respect to financial instruments above is remote.

Liquidity Risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company has a planning and budgeting process in place to help determine the funds required to support the Company's normal operating requirements on an ongoing basis. The Company ensures that there are sufficient funds to meet its short-term business requirements, taking into account its anticipated cash flows from operations and its holdings of cash and cash equivalents.

Historically, the Company's sole source of funding has been the sale of marketable securities or the issuance of equity securities for cash, primarily through private placements. The Company's access to financing is always uncertain. There can be no assurance of continued access to significant equity funding.

Foreign Exchange Risk

Foreign currency risk is the risk that the fair values of future cash flows of a financial instrument will fluctuate because they are denominated in currencies that differ from the respective functional currency. The Company's functional currency for the parent company and its subsidiaries is the Canadian dollar and major expenditures are transacted in Canadian dollars.

Interest Rate Risk

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Company is exposed to interest rate risk on its cash equivalents as these instruments have original maturities of three months or less and are therefore exposed to interest rate fluctuations on renewal. The sensitivity of the Company to a variation of 1% in the interest rate would not have a significant impact. The Company's other financial assets and financial liabilities do not comprise any interest rate risk since they do not bear interest.

Capital Management

The Company's policy is to maintain a strong capital base so as to maintain investor and creditor confidence and to sustain future development of the business. The capital structure of the Company consists of equity, comprising share capital, net of accumulated deficit.

There were no changes in the Company's approach to capital management during the year. The Company is not subject to any externally imposed capital requirements.
