

# Scryb Signs Agreement with a 'Big Five' Tech Company for Trial Evaluation of the Cybeats Cybersecurity Platform

Toronto, Ontario--(Newsfile Corp. - April 8, 2022) - **Scryb Inc. (CSE: SCYB) (OTCQB: SCYRF) (FSE: EIY) ("Scryb" or the "Company")**, is pleased to announce that it has entered an agreement with an American multinational technology corporation for a software evaluation licence of Cybeats' enterprise cybersecurity product suite.

The corporation will trial the Cybeats SBOM Studio, which is an enterprise Software Supply Chain Risk Management product that is used for SBOM (Software Bill of Materials) document management, repository, and more. The entity operates in the business of computer software, consumer electronics, and related services, and which comprises multiple verticals that require the latest innovative security solutions. The Fortune 500 company is part of the 'Big Five' American information technology companies, and one of the largest companies in the world by total revenue.

*"Since commencing commercial operations in late 2021, Cybeats SBOM Studio enterprise product suite has engaged with and is in various commercial stages with several multi-billion-dollar companies, and in this case, with one of the largest tech companies worldwide. We are experiencing significant traction along with strong signals from the market that software supply chain security is paramount to a corporation's internal capabilities, to mitigate cyber risks and increase the security posture across their products,"* said **Yoav Raiter, CEO, Scryb**.

## About SBOM

An SBOM is a record of all software components that make up a product. It is a complete, formally structured list of components, libraries, and modules that are included in the software. An analogy for SBOM is the nutritional ingredients list found on everyday food products, such as a can of coke. A Coca Cola ingredient list includes information that can be used to gauge allergy risk, expiry dates, and other food safety information. Just as food products are mandated to provide this list to consumers, SBOM is quickly becoming a similar standard in the software industry.

The Whitehouse signed an executive order in May 2021, for example, stipulating that all vendors responsible for supplying software to federal agencies must provide an SBOM. Organizations and governments are growing more aware of the importance of software supply chain security. Many regulations take effect in and around August 2022, and others are to follow thereafter. It is anticipated that SBOM will become a global standard across industries.

**Cybeats SBOM Studio** gives access to one-of-a-kind tools to manage SBOM needs and software vulnerabilities, and provides proactive mitigation of risks to their software supply chain. Key product features include:

- SBOM document management and repository
- Vulnerability, threat insights, risk management
- Software license infringement alerts
- SBOM exchange with regulatory authorities, at reduced cost

The Company is not making any expressed or explicit claims that the agreement discussed herein has, or will necessarily lead to, commercial engagements that involve financial or commercial revenues for any Cybeats product lines or for Scryb Inc.
