

Scryb Reports on Cybersecurity Trial Evaluation with Multinational Infrastructure Company

Toronto, Ontario--(Newsfile Corp. - April 20, 2022) - **Scryb Inc. (CSE: SCYB) (OTCQB: SCYRF) (FSE: EIY) ("Scryb" or the "Company")**, is pleased to report on the signing of a software evaluation licence agreement with a multinational infrastructure company for Cybeats SBOM Studio software supply chain security solutions.

The Company's Cybeats *SBOM Studio* is an enterprise Software Supply Chain Risk Management product that is used for SBOM (Software Bill of Materials) document management, repository, and other complimentary functionality. The software evaluation engagement is with a Global Fortune 500 company that provides solutions for efficiency and sustainability for private and commercial infrastructure with over €25 billion in annual revenue. It is broadly anticipated and supported by US executive orders that SBOM will become a global standard mandated for organizations dealing with the public sector, infrastructure, medical, energy, and finance among other industries.

"Like the cybersecurity threats themselves, our Cybeats SBOM Studio applies to companies independent of sector and across the globe. From early stage developers to leading multinationals, our solution is designed to exceed expectations independent of scale," **said Yoav Raiter, CEO, Scryb Inc.** "With this engagement we are excited to apply our studio product to another critical industry and put our intuitive software supply chain security in the hands of an industry leading operator."

As critical industries see a sharp increase in cybersecurity threats to software supply chains, federal governments and private sectors have recognized that increasing the security measures of related software is of national security interest. Numerous governing bodies such as the Cybersecurity and Infrastructure Security Agency (CISA) and the North American Electric Reliability Corporation (NERC) have issued supply chain cybersecurity guidelines within the past year.

About SBOM & Cybeats 'SBOM Studio'

An SBOM is a record of all software components that make up a product. It is a complete, formally structured list of components, libraries, and modules that are included in the software.

An analogy for SBOM is to the nutritional ingredients list found on everyday food products, such as a can of coke. A Coca Cola Ingredient list includes information that can be used to gauge allergy risk, expiry dates and other food safety information. Just as food products are mandated to provide this list to consumers, SBOM is quickly becoming a similar standard in the software industry.

The Whitehouse signed an executive order in May 2021 that stipulates that all vendors responsible for supplying software to federal agencies must provide an SBOM. Organizations and governments are growing more aware of the importance of software supply chain security. Many regulations take effect in August 2022, and others to follow thereafter. It is anticipated to become the global standard across industries.

Cybeats SBOM Studio gives access to one-of-a-kind tools to manage SBOM needs and predictive identification of software vulnerabilities with proactive mitigation of risks to their software supply chain. Key features include:

- SBOM document management and repository
- Vulnerability, threat insights, risk management
- Software license infringement alerts
- SBOM exchange with regulatory authorities, at reduced cost

Note: The Company is not making any expressed or explicit claims that the trial deployments discussed herein have, or will necessarily lead to, commercial engagements that involve commercial revenues for Cybeats product lines or for Scryb Inc.
