Notes to Consolidated Financial Statements
April 30, 2011
(Unaudited – Prepared by Management)

1. NATURE OF OPERATIONS AND GOING-CONCERN

The Company and its subsidiaries are exploration stage company that are in the process of acquiring, exploring and developing mineral properties through acquiring interests in the options to properties. It has not determined whether these properties contain ore reserves that are economically recoverable. The Company has not earned revenues from its mineral property interests.

The recoverability of amounts shown for mineral interests is dependent upon the discovery of economically recoverable reserves, the ability of the Company to obtain financing to complete development, and future profitable production from the properties or proceeds from disposition.

At April 30, 2011, the Company had working capital of \$398,141 (October 31, 2010: working capital of \$157,878) and an accumulated deficit of \$11,190,192 (October 31, 2010: deficit of \$10,951,139). The Company will require additional financing or outside participation to meet its planned corporate and administrative expenses for the coming year and to undertake further exploration and subsequent development of its mineral interests. The Company's ability to continue as a going-concern is dependent on continued financial support from its shareholders, the ability of the Company to raise equity financing, and the attainment of profitable operations, external financings and further share issuances to meet the Company's liabilities as they become payable.

These financial statements have been prepared on a going-concern basis, which assumes the realization of assets and liquidation of liabilities in the normal course of business. These financial statements do not include any adjustments for the recoverability and classification of recorded asset amounts and classification of liabilities that might be necessary, should the Company be unable to continue as a going-concern.

(j) Apache Property, Mexico

On December 13, 2010, the Company acquired the Apache Property, consisting of 400 hectares in Sonora State, Mexico, for consideration of 2,500,000 shares of the Company.

(k) Realization of assets

The investment in and expenditures on mineral property interests comprise a significant portion of the Company's assets. Realization of the Company's investment in these assets is dependent upon the establishment of legal ownership, the attainment of successful production from the properties or from the proceeds of their disposal. Resource exploration and development is highly speculative and involves inherent risks. While the rewards if an ore body is discovered can be substantial, few properties that are explored are ultimately developed into producing mines. There can be no assurance that current exploration programs will result in the discovery of economically viable quantities of ore.

(l) Environmental

Environmental legislation is becoming increasingly stringent and costs and expenses of regulatory compliance are increasing. The impact of new and future environmental legislation on the Company's operations may cause additional expenses and restrictions. If the restrictions adversely affect the scope of exploration and development on the mineral property interests, the potential for production on a property may be diminished or negated.

The Company is subject to the laws and regulations relating to environmental matters in all jurisdictions in which it operates, including provisions relating to property reclamation, discharge of hazardous material and other matters. The Company may also be held liable should environmental problems be discovered that were caused by former owners and operators of its properties and properties in which it previously had an interest. The Company conducts its mineral exploration activities in compliance with applicable environmental protection legislation. The Company is not aware of any existing environmental problems related to any of its current or former properties that may result in material liability to the Company.

(m) Title to mineral property interests

Although the Company has taken steps to verify the title to mineral properties in which it has an interest, in accordance with industry standards for the current stage of exploration of such properties, these procedures do not guarantee the Company's title. Property title may be subject to unregistered prior agreements of transfers and title may be affected by undetected defects.

(f) Stock-based compensation

During the six months ended April 30, 2011, the Company granted stock options to acquire up to an aggregate of 1,500,000 common shares to directors, officers, and consultants.

The fair value of stock options granted and vested during the year in the amount of \$128,850 would be allocated, \$103,510 to management fees and \$25,340 to consultants' fees.

The fair value of stock options used to calculate stock-based compensation expense is estimated using the Black-Scholes option pricing model with the following weighted average assumptions:

Risk-free interest rate	1.43%
Expected dividend yield	0
Expected stock price volatility	151.10%
Expected option life in years	3.0

Option pricing models require the input of highly subjective assumptions including the expected price volatility. Changes in the subjective input assumptions can materially affect the fair value estimate, and therefore, the existing models do not necessarily provide a reliable single measure of the fair value of the Company's stock options and agents' warrants.
