NEWS RELEASE

Canamex Announces Further Positive Drill Results and Plans to Test High Grade Structure at the Bruner Gold Project, Nye County, Nevada

(June 7, 2013) Canamex Resources Corp. (the "Company") (TSX-V: **CSQ**) (OTCQX: **CNMXF**) (FSE: **CX6**) is pleased to announce positive assay results from five reverse circulation drill holes (B-1303 to B-1307) completed on drill pad number two (Section 480mN) at the Penelas East discovery area on the Bruner gold project, Nye County, Nevada. Drill pad number two is located 80 meters north of drill pad number one (Section 400mN) where holes B-1301 and B-1302 were drilled (see news release April 23, 2013).

"We are encouraged by these results," stated President and COO Greg Hahn. "All five holes are mineralized and could be accessible by open pit. These holes were all drilled and completed before results were received from drill hole B-1301. Importantly, a three dimensional analysis of the high grade intercepts encountered in discovery hole B-1201 (see news release dated July 18, 2012) and B-1301 suggest the +110 gpt Au intercepts (+3 opt) are contained in a steep-eastward dipping structure which was not penetrated by drill holes B-1303 to B-1307."

Summary of Results

Drill Hole	Interval (ft.)	thickness (ft.)	opt Au	gpt Au
B-1303	125-255	30	0.046	1.585
	355-385	30	0.011	0.367
	455-495	40	0.014	0.475
	535-545	10	0.014	0.472
B-1304	40 - 90	50	0.010	0.355
	250-265	15	0.017	0.576
	475-495	20	0.015	0.508
B-1305	225-230	5	0.070	2.400
	565-630	65	0.018	0.671
B-1306	15 - 20	5	0.063	2.150
	345-510	165	0.032	1.090

B-1307	10–25	15	0.013	0.460
	135-145	10	0.012	0.420
	255-265	10	0.023	0.798
	345-380	35	0.010	0.350
	470-475	5	0.056	1.925
	540-570	30	0.020	0.674
	620-645	25	0.037	1.275

All other intervals contained less than 0.01 opt Au (0.34 gpt).

Project geologists have not determined the attitude of all of the mineralized intercepts and therefore cannot determine the true width of any of the reported intercepts at this time.

Drilling on the Northern Extension to the Historic Resource Area

Since completion of drill holes B-1303 through B-1307, the results for which are reported here, the drill rig has been drilling on the northern extension to the historic resource area. Six holes on two sections have been completed. Results from these holes will be announced as they are received and analyzed, and are expected to be released on a section-by-section basis going forward. The Company plans to drill one more section at the northern extension to the historic resource area and then return to the Penelas East discovery area.

New Penelas East Drill Program to Test High Grade Intercepts

As stated by Greg Hahn, a three dimensional analysis of the high grade intercepts encountered in holes B-1201 and B-1301 suggest the +110 gpt Au (+3 opt) intercepts are contained in a steep-eastward dipping structure which was not penetrated by the holes drilled from drill pad number two and reported here. Therefore, a new pad has been constructed on section 540mN, from where an historic hole drilled by Newmont Mining Corporation (BRU-085) intersected 95 feet grading 0.057 opt Au, including 5 feet grading 0.602 opt Au, which is believed to be the upper extension of the high grade structure encountered in B-1201 and B-1301. Once the third section is completed in the northern extension to the historical resource, the Company plans to move the rig back to the new pad (drill pad number three) at the Penelas East discovery area to drill test the open extensions to the high grade zone encountered in holes B-1201 and B-1301. This phase of drilling should commence mid-June.

Quality Control

Drill samples are stored on a locked storage facility on site and were retrieved by ALS-Chemex personnel, transported in their custody to the ALS-Chemex laboratory in Reno/Sparks, Nevada, where they were dried, crushed, and split, and representative splits sent to the ALS-Chemex laboratory in Vancouver for gold and silver analyses. Duplicates, blanks, and standards were inserted at regular intervals for QA/QC purposes.

Greg Hahn, President and COO and a Certified Professional Geologist (#7122) is the Qualified Person under NI43-101 responsible for preparing and reviewing the data contained in this press release.

Forward-Looking Statements:

This news release includes certain forward-looking statements or information. All statements other than statements of historical fact included in this release are forward-looking statements that involve various risks and uncertainties. Forward-looking statements in this news release include statements with respect to the estimated costs and timing of drilling programs on the Bruner property, the potential mineralization and geological merits of the Bruner property, and other future plans, objectives or expectations of the Company. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from the Company's plans or expectations include the risk that actual results of current and planned exploration activities, including the results of the Company's planned 2013 drilling program(s) on the Bruner property, will not be consistent with the Company's expectations; the geology, grade and continuity of any mineral deposits and the risk of unexpected variations in mineral resources, grade and/or recovery rates; fluctuating metals prices; possibility of accidents, equipment breakdowns and delays during exploration; exploration cost overruns or unanticipated costs and expenses; uncertainties involved in the interpretation of drilling results and geological tests; availability of capital and financing required to continue the Company's future exploration programs and preparation of geological reports and studies; delays in the preparation of geological reports and studies; the metallurgical characteristics of mineralization contained within the Bruner property are yet to be fully determined; general economic, market or business conditions; competition and loss of key employees; regulatory changes and restrictions including in relation to required permits for exploration activities (including drilling permits) and environmental liability; timeliness of government or regulatory approvals; and other risks detailed herein and from time to time in the filings made by the Company with securities regulators. In connection with the forward-looking information contained in this news release, the Company has made numerous assumptions, including that the Company's 2013 exploration programs will proceed as planned and within budget. Canamex expressly disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as otherwise required by applicable securities legislation.
