**FOR IMMEDIATE RELEASE**

**CDN MAVERICK REPORTS ON SUCCESSFUL INVESTMENT IN NORAM:  
NORAM CONTINUES TO DRILL AND  
EXAMINES POSITIVE IMPLICATIONS OF PHASE V PROGRAM**

*Vancouver, British Columbia – November 24, 2020 – CDN Maverick Capital Corp. (“Maverick” or the “Company”) (CSE: CDN; OTC/PINK: US; Frankfurt: A117RU) is updating shareholders on its approximately 4.71% interest in Noram Ventures Inc. (“Noram”) (TSX - Venture: NRM / Frankfurt: N7R / OTCQB: NRVTF) who are pleased to announce that the Company has continued drilling in mineralization at depth on Hole #7 (CVZ-62).*

Figure 1 - LF-70 drill rig on CVZ-62 site, 2020-11-17, Brad Peek, Senior Geologist and Q.P. on site, looking northwest. CVZ-62 has 50 meters of lithium claystone and is continuing to drill in the claystones. Samples have been submitted to ALS laboratories for analysis.

The Zeus property Esmeralda Formation playa lake bed sediments are horizontal and laterally continuous strata over kilometers and each drill intersection has a large radius of influence for resource estimates. This is evident in the February 20, 2019, [Updated Inferred Lithium Mineral Resource Estimate, Zeus Project, Clayton Valley, Esmeralda County, Nevada, USA NI 43-101](#) technical report for the Zeus property, where the radius of influence is 250 meters or greater. “The prior hole CVZ-61, intersected approximately 298ft (91m) of lithium claystone. With a specific gravity of 1.74 g/cc for the claystone material, this corresponds to ~31 million tonnes that potentially can be added to the resources from this one intersection alone” commented Anita Algie, Director and CFO.

“CVZ-61 is to the east of a NE-SW possible fault, and it appears that the fault has not affected the claystone unit in a measurable way; i.e., there is no measurable displacement along the fault. This bodes well for the rest of the drilling to the east of the fault, which will cover an area approximately the same as the current resources (at >900 ppm lithium cutoff)” stated Brad Peek, consulting geologist and Qualified Person for this and all 4 of the previous drilling phases of Noram’s Zeus Lithium property.

President and CEO, Dr. Tucker Barrie visited the Project this past week and reported:

“The Fall drill program is proceeding well. At present we have an LF-70 drill rig that can produce 50-60 feet of core per 12 hour shift. We are running one shift a day at present, but we will soon be going to 2 shifts with a Longyear 44 rig that is capable of 120+ feet per shift. We are on track to complete the drill program before Christmas.

On this visit I had the opportunity to meet with our neighbors in Clayton Valley who are producers of lithium and of other resources. There is potential for synergies in the production of these resources moving forward, and we will continue to have discussions in this regard. “

As well, I met with senior geologists from the Nevada Bureau of Mines and the United States Geological Survey to update them of our activities and to hear about their research related to lithium claystone deposits in Nevada. There are many ways we can work together, including providing access to our property and drill core for detailed mineralogical studies, and working toward possible lithium symposia in Nevada in the future. It would be ideal to gather industry, academia and the geological surveys to discuss Nevada’s significant lithium resources and how to increase production for the growing electric vehicle market. “

The technical information contained in this news release has been reviewed and approved by Brad Peek., M.Sc., CPG, who is a Qualified Person with respect to Noram’s Clayton Valley Lithium Project as defined under National Instrument 43-101.

#### **About CDN Maverick Capital Corp.**

CDN Maverick Capital Corp. is a Vancouver-based junior resource company with projects in North America. CDN Maverick is focused on the development of the following mineral properties:

The Ranger Lake Gold Project consists of 1,107 hectares of prospective gold exploration in southern Quebec, Canada.

The Rainbow Canyon Gold Property consists of 417 hectares of prospective gold exploration in the Olinghouse mining district, in the Washoe County Nevada.
