Brisio Innovations investment 'Lite Access Technologies' fibre-optic solution deployed in Bering Sea

VANCOUVER, BRITISH COLUMBIA – (Feb 2, 2015) -- Brisio Innovations Inc. (CSE: BZI) (PINKSHEETS: NTCEF) (the "Company") is pleased to note that Lite Access Technologies, a world leader in fibre-optic deployment solutions, which the Company made a strategic investment into earlier this year (see news release dated January 14th 2015), has been profiled in a recent article in OSP Magazine:

Some excerpts from the article include:

"Running fiber optics through Lite Access Technologies microduct(s) takes the whole issue of harsh environmental conditions -- the signal degradation and splice problems -- completely out of the equation," said Patrick Corey, Project Manager for Bering Sea Eccotech (BSE)

"...not only will the conduit and the fiber inside withstand the elements of cold, it will also withstand the heat, the ice, and all of the elements that we experience out here," Corey said.

..the flexibility and adaptability of the microduct allows BSE to place cable up to 5 times faster than conventional means and at a fraction of the cost associated with traditional trenching.

CEO Paul Andreola states, "We are extremely excited about Lite Access' accomplishments and potential. This article clearly demonstrates the company's capabilities and the opportunities that present themselves as the worldwide demand for high speed broadband and fiber optic connectivity increases. As we have seen in recent news, industry leader Google has announced they are increasing the rollout of their Google Fiber to 18 new cities, which we believe is highly indicative of the growth potential for this sector".
