

## Wounded Moose Trench Sampling Results

**Vancouver, BC, November 5, 2013 - Taku Gold Corp. (the “Company”) (TSXV: TAK)** is pleased to announce results of a trenching and sampling program recently completed in the northern part of the 100 per cent owned, 471-claim (9,968 hectare) Wounded Moose property located approximately 65 kilometres southeast of Dawson City, Yukon. A map of the sampling results can be viewed by clicking <http://bit.ly/1feCTbB>

Trenching with a Can-Dig mini-hoe at the north end of a gold-in-soil geochemical anomaly outlined in 2011 encountered values up to 2.3 grams per tonne gold. This result is considered noteworthy and merits further assessment work. The trenching was hampered by rather thick overburden generally beyond the capability of the mini-hoe. Trenching with a full size excavator is recommended to further test the gold-in-soil geochemical anomaly. Good access is provided by a road that runs through the gold-in-soil trend and makes for a relatively cheap exploration target.

All analytical results mentioned in this release were determined by Acme Analytical Laboratories Ltd. (“Acme”) in Vancouver, British Columbia. Acme is accredited under ISO 9001. Rock samples were prepared by crushing one kilogram to 80 per cent passing minus 10 mesh and then pulverizing a 250-gram subsample to 85 per cent passing minus 200 mesh. Each subsample was analyzed for 36 elements (including gold) by 15 gram Aqua Regia digestion, ICP-MS finish. Mark Fekete, P.Geo is the designated “qualified person” as defined in Section 1.2 in and for the purposes of National Instrument 43-101 that reviewed and approved the technical content of this release.

### **About Taku Gold Corp.**

Taku Gold Corp. (<http://www.takugold.com>) is a mineral resource company focused on the exploration and development of precious metal properties in Canada with a particular emphasis on the White Gold District of the Yukon Territory and the Tagish Lake region of Northern British Columbia.
