

PRESS RELEASE

RENFORTH RESOURCES INC.

65 Front Street East, Suite 304, Toronto, Ontario, M5E 1B5

RENFORTH COMMENCES DRILL PROGRAM

Toronto – May 14, 2014 – Renforth Resources Inc. (CNSX: RFR) (“**Renforth**” or the “**Company**”) announces that a second phase drill program has commenced on the Company’s wholly owned New Alger Property, on the Cadillac Break near Malartic Quebec. The focus of this program is to target shallow gaps within the current resource model, caused solely by a lack of drill information.

“We are optimistic that this drill program will be successful in adding to the resource we established within the Thompson-Cadillac Mine Area of the property, associated with the Cadillac Break, which we straddle. Our model has demonstrated the continuity of the mineralized structures, our next course of action is to address areas with gaps in the data by drilling.” states Nicole Brewster, President and CEO of Renforth.

ABOUT NEW ALGER

Renforth’s 100% owned New Alger project is located on the Cadillac Break, near Malartic Quebec. The Cadillac-Larder Lake Break extends over 200 km, from Kirkland Lake, Ontario in the west to past Val d’Or, Quebec in the east, this approximate 200 km long gold-bearing structure has been in production for over 9 decades, with past production and known reserves exceeding 80 million ounces of gold. Renforth’s immediate neighbours include Agnico Eagle’s LaRonde mine complex, contiguous to the north and west, and Radisson’s O’Brien Mine project, contiguous to the east.

The New Alger Project currently consists of three areas of interest;

- Thompson-Cadillac Mine Area (operated in the 1930’s), where Renforth established the first ever 43-101 inferred resource in April 2014, of 201,000 inferred ounces of gold from surface to a depth of only 200m (refer to press release of April 3rd 2014).
- Pontiac Vein area, where Renforth re-discovered the original, early 1930’s, gold showing structure which led to the discovery of the Thompson-Cadillac Mine, approximately 250m to the north. The Pontiac Vein area is of interest as the surface vein structures, which yielded a grab sample high of 3.1 g/t Au in the summer of 2013, continue over an E / W strike length of 250 m, remaining open but lost to prospecting efforts due to surface growth and ground conditions. Renforth acquired additional adjacent ground with geophysical signatures that suggest the possible continuation of the Pontiac Vein structure, subject to a southern offset from a known N / S trending fault on the property.
- Northern Exploration Zone – the area north of the Break has seen little to no exploration, however, Renforth has identified a mineralized IP anomaly trending E / W across the northern portion of the property, in addition historical drill records indicate a mineralized porphyry unit. This is of interest as gold-producing structures exist on the northern part of the break on properties to the east.

NEW ALGER RESOURCE**April 2014 New Alger Resource Statement**

Thompson-Cadillac Mine Area

Class	Tonnes	Au g/t	Total Oz
Inferred	3,007,000	2.08	201,000

- (1) *Mineral resources which are not mineral reserves do not have demonstrated economic viability. The estimate of mineral resources may be materially affected by environmental, permitting, legal, title, taxation, socio-political, marketing, or other relevant issues.*
- (2) *The quantity and grade of reported inferred resources in this estimation are uncertain in nature and there has been insufficient exploration to define these inferred resources as an Indicated or Measured mineral resource and it is uncertain if further exploration will result in upgrading them to an Indicated or Measured mineral resource category.*
- (3) *The mineral resources in this press release were estimated using the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions and Guidelines prepared by the CIM Standing Committee on Reserve Definitions and adopted by CIM Council.*

Technical information contained in this press release has been reviewed and approved by Brian H. Newton P.Geo, a “qualified person” as defined by National Instrument 43-101.

ABOUT RENFORTH

Renforth Resources Inc. is a Toronto-based exploration company with interests in two exploration assets: the previously productive New Alger property, located in the Cadillac Break Mining Camp, Québec, and the Mina Pilar Project, located SW of Madrid Spain, also a historic producer of gold. With the closing of this financing Renforth has 41,919,172 shares issued and outstanding.
