For Immediate Release

Renforth Successfully Completes Exploration on Three Wholly Owned Gold Properties in Malartic Quebec Mining Camp

Renforth Resources Inc. (CSE – RFR) (OTC Pink – RFHRF) (“Renforth” or the “Company”) is pleased to announce that that our July exploration program has been successfully completed, with sampling taking place at each of Parbec, New Alger and West Malartic, samples taken in the field have been submitted for assay.

A summary of our fieldwork is as follows;

New Alger

- Sampling in the areas of the two access trails to the Discovery Veins stripped area was completed, outcropping on surface in several locations and on each trail was blue/grey quartz veining with sulphides present. In one instance several veins of varying thickness and with blowouts extends over a length (E/W) of approximately 20m and a width (N/S) of approximately 5m, this is thought to be the surface expression of a 1930’s horizontal hole drilled during the advancement of a tunnel which ends under the main blast pit of the Discovery Veins.
- At the SW and NE end of the previously stripped gold bearing Discovery Vein system, and along the northern edge of the central portion, Renforth was able to complete additional sampling which was not completed during the initial program, visually this sampling continues the quartz veining structures, the presence of mineralization will be determined by assaying which is currently being done to samples obtained.
- Renforth completed preliminary prospecting and some initial soil sampling in the southern claims at New Alger where government data offers some of the highest soil samples obtained in the area.

Parbec

- Renforth was able to complete the washing, mapping and a bit more sampling at Parbec as planned, both within the Cadillac Break and the diorite splay within the Pontiac.

Malartic West

- Renforth received this project back while our geologists were in the field so the opportunity was taken by Renforth to do some initial prospecting and sampling on the property. The targets of this effort were reported copper and gold showings on the property, Renforth will report on this program and its results once they are received.

Brian H. Newton P.Geo, a qualified person pursuant to National Instrument 43-101, has approved the technical information found in this press release.
