VINERGY RESOURCES LTD.

For the year ended February 28, 2014

The fair values of other financial instruments, which include amounts receivable, accounts payable and accrued liabilities, amounts due to related parties, loans payable, and convertible debenture, approximate their carrying values due to the relatively short-term maturity of these instruments. The fair value of the convertible debenture is estimated to approximate its carrying value based on borrowing rates currently available to the Company for a loan with similar terms.

(b) Credit Risk

Financial instruments that potentially subject the Company to a concentration of credit risk consist primarily of cash. The Company limits its exposure to credit loss by placing its cash with high credit quality financial institutions. Amounts receivable consist of GST refunds due from the Government of Canada. The carrying amount of financial assets represents the maximum credit exposure.

(c) Foreign Exchange Rate Risk

The Company is not exposed to any significant foreign exchange rate risk.

(d) Interest Rate Risk

The Company is not exposed to any significant interest rate risk.

(e) Liquidity Risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company currently settles its financial obligations out of cash. The ability to do this relies on the Company raising equity financing in a timely manner and by maintaining sufficient cash in excess of anticipated needs.

(f) Price Risk

The Company is exposed to price risk with respect to commodity prices. The Company's ability to raise capital to fund exploration and development activities is subject to risks associated with fluctuations in the market price of commodities. As the Company does not have any producing assets or any current programs for exploration management considers the Company's commodity price risk to be minimal.
