First Tellurium Interpreting IP Survey Data in Preparation for 2024 Exploration Program at Deer Horn Project

Interpreted data expected to provide guidance and targets for planned exploration, including drilling.

Vancouver, BC, Canada, June 27, 2024 – First Tellurium Corp. (CSE: **FTEL**, OTC: **FSTTF**), reports it has contracted with Campbell & Walker Geophysics to interpret data from First Tellurium’s 2023 Induced Polarization geophysical survey at the Deer Horn Property in West Central British Columbia.

The objective of the interpretation is to provide additional guidance for planned exploration at Deer Horn, including drilling, for the 2024 season.

“For much of 2024, we have focused on setting up manufacturing for the PyroDelta thermoelectric device,” said First Tellurium President and CEO Tyrone Docherty. “With that process moving into the hands of the very capable RESOLVE ngo (as reported [June 5](#) and [June 25](#)), we are refocusing on advancing the Deer Horn Project.”

Exploration at Deer Horn in 2023 expanded the mineralized zone to approximately 17.5 square kilometers with a growing copper porphyry and high-grade Au-Ag-Te. This work also confirmed a crucial structural connection between the property’s Pond copper porphyry and gold-silver-tellurium systems. Further information about the 2023 program can be found in the Company’s news releases dated [August 16](#), [August 31](#), [October 4](#) and [November 6](#), 2023.

Campbell & Walker Geophysics is located at 16 Forth Street, Edinburgh, ML EH1 3LH, Scotland.
