

Maple Leaf Green World Inc. Provides Update on Its California CBG Hemp Project

CALGARY, Alberta, March 30, 2020 -- Maple Leaf Green World Inc. ("**Maple Leaf**" or the "**Company**") (**NEO: MGW, OTCQB: MGWFF**) is pleased to announce that the two (2) renovated greenhouses are complete and fully operational. The land behind the two (2) completed greenhouses has been levelled and prepped for the three (3) additional greenhouses as mentioned in the press release dated March 5, 2020. The three (3) new greenhouses, plus an additional 2,000 sq. ft. greenhouse, had arrived on site as scheduled. Heavy snow falls had delayed construction by about 1-2 weeks but has since resumed. Maple Leaf plans to utilize the 2,000 sq. ft. greenhouse for seed germination, housing mother plants, and crossbreeding strains. The Company's California team is confident that the four (4) greenhouses will be completed by the end of this week. Furthermore, an additional 10,000 sq. ft. of land has been cleared and levelled for the prospect of adding three (3) more greenhouses, bringing the total greenhouses to nine (9) with a growing capacity of 26,000 sq. ft. Maple Leaf recognizes the popularity and demand for CBG enriched hemp and is preparing for further expansion.

The Company is also excited to announce that 500 seedlings of the popular strain La Crème has been ordered and estimated to be delivered on site within 3 weeks. The supplier is currently germinating the seeds for Maple Leaf and will arrive as 3-4" seedlings to maximize the survival rate during transportation and transplanting. Upon arrival, the plants will be transplanted into the greenhouses to mature for 10 to 14 days. After which, the plants will be propagated by taking approximately 1,000-1,200 cuttings and replanting for a total of 1,500 plants with the extra cuttings placed in the 2,000 sq. ft. greenhouse for cloning.

About La Crème CBG Strain

La Crème is a sativa dominant hybrid that emits a low odor and high yielding CBG/CBGa with a 9 to 10 week cycle. It is highly sought after due to its notable 18% CBG concentration with a total of 0.20% THC. Its rich terpene profile embodies both cherry and fruit notes. The cured flowers release a beautiful fresh floral scent that is both pleasant and energizing. The main uses for this strain are hemp cigarettes, health supplements, cosmetics and other skin care products.

CBG enriched hemp has been gaining popularity for its perceived medical applications without the psychoactive component. Studies have shown that CBG can improve and/or strengthen the immune system which can provide a major defense against COVID-19.

Production Capacity and Market Price

La Crème is a popular strain due to its high CBG and low THC concentration. The Company intends to harvest either 100% flowers, seeds, or a combination, as there is a tremendous demand for both. The current market prices for cured flowers are between \$400 - \$800 USD/lb and seeds are approximately \$1 USD/seed. With 15,000 sq. ft. of cultivation space, the Company intends to grow 1,500 plants and achieve 3 harvests per year. The Company's cultivation team estimates that each plant will yield approximately 2 lbs of cured flowers or approximately 10,000 seeds per plant of which 90% will be feminized. The total yearly production is estimated to be approximately 9,000 lbs cured flowers or approximately 1,500 lbs of feminized seeds (1 lb has approx. 27,000 seeds).

Health and Safety Update

Maple Leaf has been closely monitoring the COVID-19 outbreak to ensure the safety of the community and staff. The outdoor nature of its Hemp Project in Riverside California does not require the cultivation team to be in close quarters with anyone outside of the Company. The team is still on site and actively working while operating within the guidelines issued by health officials. At this point, the Company is not aware of any member who has come in close contact with anyone who is suspected or experiencing any COVID-19 symptoms. The Company will continue to monitor the situation and respond accordingly.

Henderson, Nevada Update

The Company would also like to announce that the land sale in Henderson has been completed with the proceeds being used to develop its California Hemp Project.
