NR 02 - 2012

Big Sky Petroleum drills the Midboe 4-3 Science Well.

The Midboe 4-3 Science Well has been drilled to total depth. The well was drilled to determine the reservoir characteristics of the Bakken and Three Forks formations. The well was intended to determine the prospectiveness of the eastern flank of the Kevin Dome and the information will be included in our revised geological model, which will determine our future geographic area of interest.

The 81-4 Well, located in Glacier County, Montana, is expected to receive permitting approval in Q2. The Company plans to drill a 4,500' pilot hole to test the Middle Bakken. Based upon results of the vertical test, a 3,500' horizontal leg is planned for the Middle Bakken. Frac design, stimulation and completion programs will be concluded after all well data has been processed and evaluated.

The Somont 14-29 Well is still being tested and evaluated. The evaluation from this well will determine the horizontal drilling and completion program for the **Somont 15-13 Well**, which has been drilled vertically and awaiting completion.

Bill Stelzer, Big Sky's Senior Geologist, has commented that "we continue to be optimistic with our results. We have encountered oil saturated formations in our objective targets and we are awaiting a complete engineering evaluation of the 14-29 horizontal well bore."

About Big Sky

Big Sky is an oil and gas exploration and development company based in Billings, Montana, with its main focus primarily on the exploration and development of oil and gas in the Alberta Basin, commonly referred to as the Bakken source system. Big Sky's operations covers an approximate 100,000 net mineral acres in Toole and Glacier Counties, Montana, of which Big Sky has a 33.33% interest.
