WESTSTAR RESOURCES ACQUIRES EAST MILLER CLAIMS ADJACENT TO MILLER GRAPHITE PROJECT, QUEBEC

Vancouver, BC – September 25, 2013: Weststar Resources Corp. (TSX-V: WER) (the “**Company**” or “**Weststar**”) announced today that it has acquired 100% interest in 10 mineral claims, covering approximately 600 hectares located in Quebec, Canada (the “East Miller Property” or the “Property”), adjacent to the east of Canada Carbon Inc. (TSX-V: CCB) (“CCB”) historic Miller Graphite Project, which is a hydrothermal vein type graphite occurrence, and in the vicinity of Caribou King Resources Ltd. (TSX-V: CKR) (“CKR”).

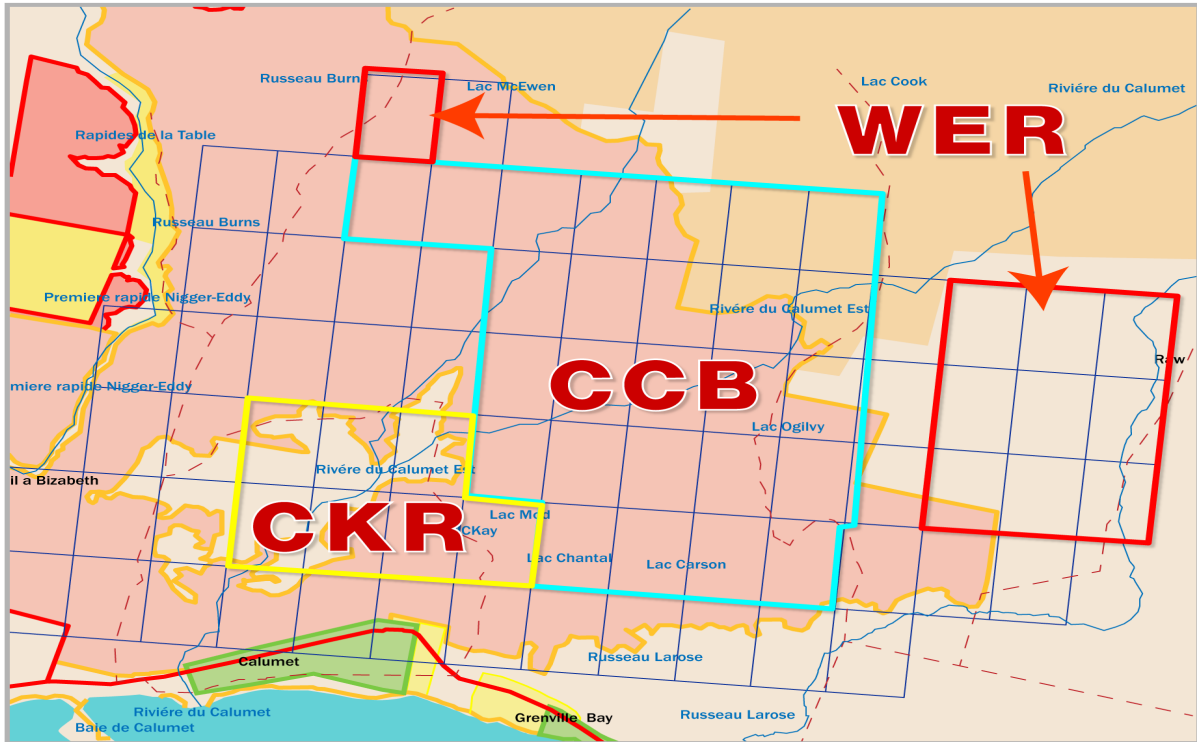

Steven Lauzier, PGeo, CKR’s Calumet project geologist commented on September 18, 2013: “The graphitic marble block discovered at Calumet shows the high potential of the area and also reveals that more graphite mineralization can be present in the immediate area, probably due to a similar mineralization process as the Miller graphite hydrothermal system. The sulphidic block is also an indicator that hydrothermal processes may have happened in the area.” (CKR press release September 18, 2013)

CCB is exploring its historic Miller Graphite Mine, and recently announced on September 12, 2013: “Of greatest significance is a large anomaly that extends from the previously announced (VN1) graphite vein discovery for 285 metres to the southeast and 15 m to the northwest. This large anomaly, located within the eastern claim block, is elongated toward the east and also correlates with a magnetic gradient.”

WER has acquired ground adjacent to CCB and to the East of the historic Miller Graphite Project. CCB disclosed on September 12, 2013 that its VTEM geophysical anomaly “...is elongated toward the east and also correlates with a magnetic gradient.”
