TRUECLAIM EXPLORATION INC. ANNOUNCES FIRST RESULTS FROM SCADDING DRILL PROGRAM, INCLUDING 13.3 GRAMS GOLD OVER 10.5 METRES.

Trueclaim Exploration Inc. is pleased to provide the first results from the Company's diamond drilling program on its Scadding Gold Project located near Sudbury, Ontario.

Hole 17-03 intercepted a mineralized chlorite breccia zone which hosted visible gold assaying at 13.3 grams gold over 10.5 metres. The hole was targeting potential extensions of the North zone which had been previously intersected by Hole 10-07 assaying at 12.9 grams gold over 19.3 metres. The intersection point demonstrates that mineralization may continue along strike and down plunge. The Company has drilled an additional hole (Hole 17-04) along strike of Hole 17-03 which intersected similar alteration and sulphide mineralization. Hole 17-04 is currently in the lab for assay.

The Company has also targeted a new zone of mineralization north east of the East-West Zone (Hole 17-06) and encountered approximately 100 metres (approximately 30 to 130 m) of mineralized chlorite breccia. The drilling continued at a depth beyond 158 metres. The hole intersected a significant fault structure, mineralized quartz veining along with apparent mineralized felsics.

Upon receipt of the balance of the assays, the Company plans to interpret the data and proceed as soon as reasonably practicable with an additional 3,000 metre drill program.

The Scadding Gold Project, located within the Sudbury Mining District, is accessible by a serviced, all-season road. The property is a past producing mine that produced over 29,000 ounces of gold from approximately 140,000 tons of ore at a head grade of 7.2 grams per ton in the late 1980s. The mine was subsequently closed due to falling gold prices.

Quality Control

Northern Sphere's quality control and assurance program includes the use of an independent certified lab, AGAT Laboratories ("AGAT") of Mississauga, Ontario. All AGAT geochemical hub laboratories are accredited to ISO/IEC 17025:2005 for specific analytical procedures. The AGAT quality program includes quality control steps through sample preparation and analysis, inter-laboratory test programs, and regular internal audits. It is an integral part of day-to-day activities, involves all levels of AGAT staff and is monitored at top management levels.

Qualified Persons

Steve Gray, P.Geo., Vice President of Northern Sphere has reviewed, prepared and approved the scientific and technical information in this press release and is Northern Sphere's "Qualified Person" as defined by National Instrument 43-101 - *Standards of Disclosure for Mineral Projects*.

TRM is very pleased and encouraged by the progress NSM is making on advancing the Buckeye Patent Property.
