

# Green River Gold Completes Grab Sampling Exercise at Its High-Grade Kymar Silver Project In BC

Edmonton, Alberta--(Newsfile Corp. - October 19, 2021) - Green River Gold Corp. (**CSE: CCR**) (**OTC Pink: CCRRF**) ("**Green River Gold**") (the "**Company**") is pleased to announce that it has completed the Grab Sampling exercise at its wholly-owned Kymar Silver Project in British Columbia, Canada. The samples were sent to ALS Lab. in Vancouver, BC.

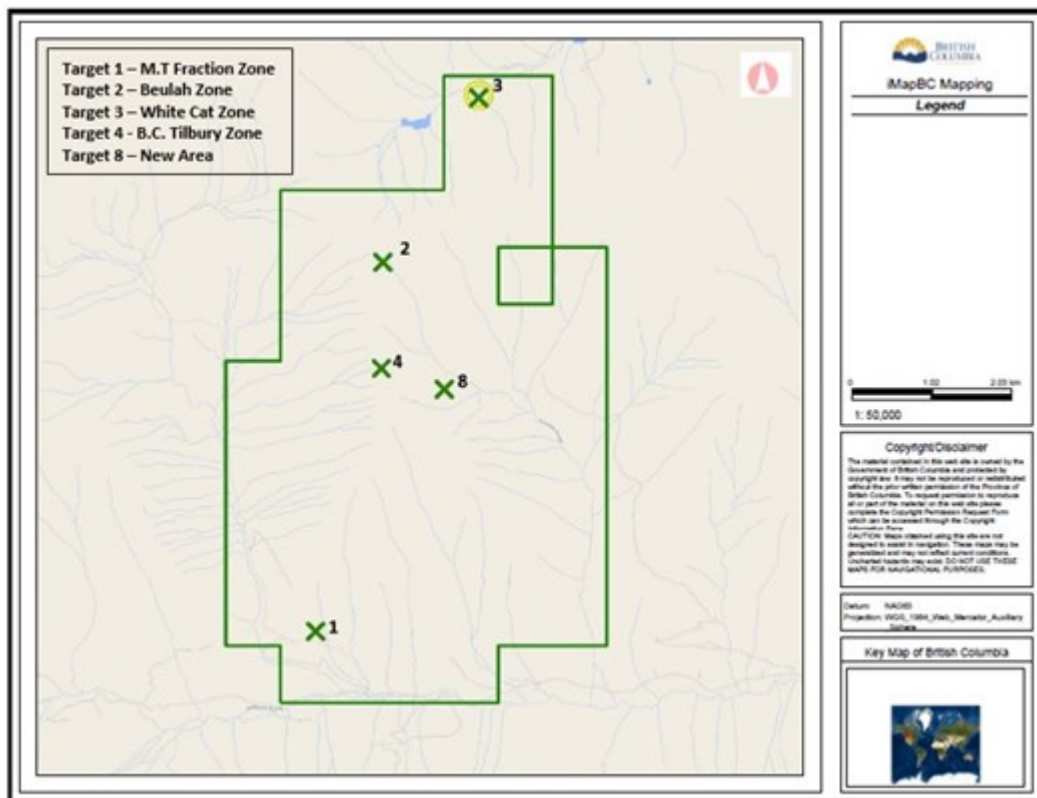

The purpose of the program was to complete a "first-pass" look at the property, generate a surface geological map, and collect grab samples from artisanal workings and other areas of interest. A total of 5 grab samples of rock were collected for assaying (the grab samples are selected samples and not necessarily representative of the mineralization hosted on the property). The Kymar Project may be part of a much larger mineralized system which will be tested.

## Kymar Silver Project Highlights:

- Bulk sample done in 1926 with an **average grade of 2,000gpt silver, 57% lead, 0.8% copper, and 3.4gpt gold.**
- Located in SE BC, approximately 28km west of the town of Invermere in the Golden Mining Division.
- 6 high-grade targets based on historical production, old shaft/stockpiles, and other old workings.
- The mineralization found at the Kymar Silver Project to date consists of polymetallic veins hosted within the Purcell Supergroup strata, which includes the Mount Nelson and Dutch Creek formations. The historically mined ore included galena, tetrahedrite, chalcopyrite and minor sphalerite.

Perry Little, President and CEO of Green River Gold, stated, "that the Kymar Project is located in an area of old producing mines, and new discoveries. We have an extensive land package, several priority target areas and aggressive exploration plans. We are now designing an exploration program that is planned to start in 2022 after the winter season ends."

The grab sampling program was designed to collect representative samples primarily from areas of old workings. Each sample site was located by GPS and plotted on base maps (See Figure 1 below). All samples were sealed in individual bags and identified with appropriate sample tags. Samples were stored in a secure place after which the samples were shipped to ALS Vancouver, BC. Sample preparation will be carried out in the ALS lab for analysis.

### Qualified Person:

Mr. Stephen Kocsis, P.Geo., is the qualified person as defined by National Instrument 43-101 and has reviewed and approved the technical information in this news release.

### About Green River Gold Corp.

Green River Gold is a Canadian mineral exploration company focused on its wholly-owned, high-grade Fontaine Gold Project, Quesnel Nickel/Cobalt Project and Kymar Silver Project which are located in renowned mining districts in British Columbia.

The 8,900-hectare Fontaine Gold Project is situated 12 kilometers southwest of Barkerville. The property includes both placer and hard-rock tenures. The properties straddle an 18km length of the Barkerville and Quesnel Terranes and are contiguous to Osisko Development Corp.'s mineral claim group containing a proposed mine location at its Cariboo Gold Project.
