

## **MAINSTREAM PROVIDES UPDATE ON BOBJO DRILLING**

**April 19th, 2011 – Winnipeg, MB** – Mainstream Minerals Corporation (TSX.V: MJO) (“Mainstream”) is pleased to provide shareholders with an update on the drilling program that has been conducted by Bobjo property optionee Premier Gold Mines Limited (TSX: PG) (“Premier”).

Since signing of the formal option agreement on February 11<sup>th</sup>, 2011 Premier has completed 3 holes totaling approximately 1,500 meters. Of the three holes drilled within this property, one significant intersection over 1 gpt was returned: RG1109 returned 2.20 gpt over 2.9 m from 222.1 m to 225.0 m, including 5.06 gpt over 1.0 m from 222.1 to 223.1 m. This hole tested the Northgate Zone, and contains quartz-ankerite-tourmaline veins with traces of fine-grained disseminated pyrrhotite, pyrite, sphalerite and molybdenite. Hole RG1108 tested the northeast extension of the shear zone that hosts the Northgate showing. This structure was recognized in the hole from 400 m to 435 m, which contains strongly-altered basalts and quartz-ankerite-tourmaline veinlets, but no significant gold assays. Hole RG1110 tested a geophysical target coincident with a regional shear zone. It encountered sericite-silica altered tuff with 3-4% stringers of fine-grained pyrite from 247 m to 410 m. No significant gold assays were returned.

Going forward, an extensive summer prospecting and sampling program is currently being planned by Premier to ground-truth the numerous untested mag and EM targets in order to rank these targets for future drilling programs.

Under the terms of the joint-venture agreement, Premier can earn up to a 60% undivided interest in the Bobjo Mine property by completing certain cash and share payments to Mainstream. In addition to the payments, Premier must expend \$2,250,000 for exploration and development on the property within the first three years of signing of this agreement to earn its interest. A minimum of \$500,000 has been expended, as required, prior to the first anniversary. At Premier’s sole discretion, the cash and share payments and exploration expenditures can be accelerated or the Agreement can be terminated.

Upon completion of the exploration expenditures and cash and share payments as set out above, Premier will have a one-time option to increase its’ ownership interest in the joint-venture by 10% bringing the total up to 70% by making an additional payment to Mainstream and funding an additional \$2,000,000 in exploration prior to the fifth anniversary date.

Premier shall be the Operator of the project during the earn-in period and so long as it’s interest is greater than 50%.

Tim Twomey, P.Geo is the Qualified Person on this project pursuant to National Instrument 43-101 and has reviewed and approved the technical disclosure in this press release.

## About Mainstream Minerals

Mainstream Minerals Corporation is a mineral exploration and development company focused on precious metals mining properties with economic potential, with the aim of bringing such properties to commercial production. The Bobjo Mine, Slate Lake, Fly Lake and the past producing Hudson Patricia Mine projects are located in the prolific Red Lake Gold Camp in northwestern Ontario. The Rowan Lake project covers 12.5 kilometres on the Cameron Lake-Pipestone Fault in the Kenora Mining District. Other projects include the Price and West Keefer Claims located in the West Timmins area in north-central Ontario and the Casa Berardi Claims in northern Québec.

MJO Shares Outstanding: 52,637,130
