CAUTION REGARDING FORWARD LOOKING STATEMENTS

This MD&A contains certain statements that constitute forward-looking statements (within the meaning of the Canadian securities legislation and the U.S. Private Securities Litigation Reform Act of 1995) that involve risks and uncertainties. Forward-looking statements are frequently, but not always, identified by words such as "expects", "anticipates", "believes", "intends", "estimates", "potential", "possible" and similar expressions, or statements that events, conditions or results "will", "may", "could" or "should" occur or be achieved. The forward-looking statements may include statements regarding exploration results and budgets, mineral resource estimates, work programs, capital expenditures, timelines, strategic plans, market price of commodities or other statements that are not statement of fact. Forward-looking statements are statements about the future and are inherently uncertain, and actual achievements of the Company may differ materially from those reflected in forward-looking statements due to a variety of risks, uncertainties and other factors. For the reasons set forth above, investors should not place undue reliance on forward-looking statements. Important factors that could cause actual results to differ materially from the Company's expectations include fluctuations in commodity prices and currency exchange rates; uncertainties relating to interpretation of drill results and the geology, continuity and grade of deposits; uncertainty of estimates of capital and operating costs, recovery rates, production estimates and economic return; the need for cooperation of government agencies and native groups in the exploration and development of properties and the issuance of required permits; the need to obtain additional financing to develop properties and uncertainty as to the availability and terms of future financing; the possibility of delay in exploration or development programs or in construction projects and uncertainty in meeting anticipated program milestones; uncertainty as to timely availability of permits and other government approvals; uncertainties involved in disputes and litigation; and other risks and uncertainties disclosed in other information released by the Company from time to time and filed with the appropriate regulatory agencies.

It is the Company's policy that all forward-looking statements are based on the Company's beliefs and assumptions, which are based on information available at the time these assumptions are made. The forward looking statements contained herein are as of August 28, 2013 and are subject to change after this date, and the Company assumes no obligation to publicly update or revise the statements to reflect new events or circumstances, except as may be required pursuant to applicable laws. Although management believes that the expectations represented by such forward-looking information or statements are reasonable, there is significant risk that the forward-looking information or statements may not be achieved, and the underlying assumptions thereto will not prove to be accurate. Forward-looking information or statements in this MD&A include, but are not limited to, information or statements concerning our expectations for satisfactory drill results.

Actual results or events could differ materially from the plans, intentions and expectations expressed or implied in any forward-looking information or statements, including the underlying assumptions thereto, as a result of numerous risks, uncertainties and other factors such as those described above and in "Risks and Uncertainties" below. The Company has no policy for updating forward looking information beyond the procedures required under applicable securities laws.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

INTRODUCTION

This Management Discussion and Analysis ("MD&A") of the operating results and financial condition of Golden Sun Mining Corp. (formerly Silver Sun Resource Corp.) (the "Company" or "Golden Sun") for the year ended April 30, 2013 should be read in conjunction with the audited consolidated financial statements for the year ended April 30, 2013 which are prepared in accordance with International Financial Reporting Standards ("IFRS").

The Company is a precious and base-metals mineral exploration company. The corporate acumen of the Company's management will facilitate the ongoing corporate and exploration growth. The management team will continue to evolve as the Company grows as a mining exploration company.

The Company currently with has one property in the United States, Cherry Hill, and two properties in Mexico, Zacatecas and Yoreme.

The Company's stock was halted on June 24, 2013, on the TSX Venture Exchange as a result of unpaid transfer agent fees. The transfer agent has subsequently been paid but the Company requested to remain halted until after the Extraordinary General Meeting scheduled for September 11, 2013. The Company has until October 3, 2013 to implement all changes derived from the Extraordinary General Meeting.

This MD&A is prepared as at August 28, 2013. All dollar figures stated herein are expressed in Canadian dollars, unless otherwise stated.

Readers should use the information contained in this report in conjunction with all other disclosure documents including those filed on SEDAR at www.sedar.com.

DESCRIPTION OF THE BUSINESS

Golden Sun Mining Corp. is a public company incorporated under the Business Corporations Act (British Columbia) on March 14, 2007 as a Capital Pool Company as defined in TSX Venture Exchange (the "Exchange") Policy 2.4. The Company is listed on the TSX Venture Exchange ("TSX") under the trading symbol "GSU", on the Frankfurt Stock Exchange under the trading symbol "SS6", and on the OTC Pink Current under the symbol "GSUXF". The Company is also DTC eligible in the United States.

The Company is in the business of exploring mineral properties with its major project being the Cherry Hill Gold mining claims in Siskiyou County in northern California.

The Company's corporate office and principal place of business is at Suite 400 – 409 Granville Street, Vancouver, British Columbia, Canada, V6C 1T2.

EXPLORATION AND EVALUATION PROPERTIES

Cherry Hill Gold Mine, California, USA

On April 15, 2011, the Company announced that it had closed the Definitive Agreement for the purchase of a 51% interest in the Cherry Hill Mine mineral claims, located in Siskiyou County in northern California, whose key asset is the past producing, Cherry Hill Gold Mine. In consideration for the 51% interest in the project, the Company agreed to pay USD\$555,000. The Cherry Hill Mine is fully permitted and consists of a high grade underground quartz lode mine that is located on a claim block consisting of six unpatented mining claims. The Cherry Hill purchase includes one mill site claim including a 750 tonne per month gravity circuit mill with all machinery and equipment. The property is approximately 125 acres located in the Klamath National Forest in Siskiyou County,

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

California, approximately 8 miles from Yreka, California. The Cherry Hill Mine has had a substantial amount of work done in the past on multiple levels as it has been in production numerous times during the past 100 years.

On May 10, 2011, the Company announced that it had formed three wholly owned U.S. subsidiaries: Golden Sun, LLC; Cherry Hill Holdings, LLC; and Lucky Boy Resources, LLC which will function as the American operating companies for Golden Sun.

In addition, the Company announced that it had received approval from the United States Forest Service ("USFS") to continue with the current Plan of Operations, which was valid until the year 2015 using the permits and licenses that were currently in place. Once production resumes at Cherry Hill, the Company planned to apply to the USFS to broaden the Plan of Operations at Cherry Hill to include the entire property for which a full environmental assessment would then be required.

On May 12, 2011, the Company announced that it had increased its interest in the Cherry Hill Mine mineral claims to a total of 68.15% by acquiring an additional 17.15% interest. In consideration for the additional 17.15% interest, the Company agreed to issue 500,000 shares of common stock of the Company subject to obtaining all applicable regulatory, corporate approvals and consents, including the consent of the TSX Venture Exchange.

The Company then increased its interest to 100% and in consideration for the remaining 31.85% interest, the Company agreed to issue 950,000 shares of common stock of the Company and issue 475,000 common share purchase warrants at a price of \$0.56 for a period of 12 months from the date of closing, subject to obtaining all applicable regulatory, corporate approvals and consents, including the consent of the TSX Venture Exchange.

On July 7, 2011, the Company announced that it had received confirmation from Mojave Desert Minerals, LLC (stationed in Oatman, Arizona) that they would serve as the primary Underground Mine Rescue team for the Cherry Hill Gold Mine. Further, the Company received confirmation from the Siskiyou County Sheriff's Department (Search and Rescue Team) that assistance would be provided in the event of an emergency.

On July 20, 2011, the Company announced that it had received approval from the City of Yreka to operate a mill within the city limits. Until such a time that permitting and construction is initiated, Golden Sun has access to a fully operational contract mill to process all mineralized rock to be processed from the Cherry Hill Gold Mine.

On August 24, 2011, the Company announced that mine development work would start with the creation of a refuge chamber as well as areas for the safe storage of the explosives magazine and blasting caps. This development work, as a requirement of the Mine Safety and Health Administration ("MSHA") would allow the Company to expand its understanding of the underground geometry of the queen vein as approximately 105 feet of crosscuts are planned. These crosscuts outside of the vein would also provide the Company with stations where underground drilling can be conducted from in the future to test the for the down-dip extensions of the vein. This development work would also prepare the queen vein for production by expanding the Q4-1 raise, which will be the focus of the first new production from the mine. The Q4-1 raise will be extended higher into the vein and widened such that production and mucking can happen simultaneously on different headings, which is anticipated to increase production rates.

On October 21, 2011 the Company announced that it had completed a bulk sampling program at Cherry Hill. Approximately 100 tonnes of mineralized material was processed at the Discovery Day Mine's gravity circuit mill, which produced two separate concentrates: a free-gold bearing concentrate and a sulphides concentrate that requires additional processing. The value of these concentrates was assumed to be low and has yet to be determined.

On October 25, 2011 the Company announced that metallurgy test results indicated recoveries of up to 94.69% for gold and up to 87.15% for silver were attainable for material from the Company's wholly owned Cherry Hill Gold Mine. The Company also announced that it had retained Derrick Strickland, P. Geo, to prepare a National Instrument 43-101 compliant technical report with respect to Cherry Hill by the end of the calendar year.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

On October 27, 2011 the Company announced that production had begun at the Cherry Hill Gold Mine and that mineralized material was being stockpiled at its secure storage facility prior to transport to the Merlin Mill, located some 86 miles away, in Grants Pass, Oregon.

On January 12, 2012, the Company announced results from samples submitted by Derrick Strickland, P. Geo., on behalf of Silver Sun.

A total of six samples were submitted to Acme Labs for assaying:

- Sample CH11-01 that was taken at the 400 foot mark of the main Q4 level (at the previous face) from banded quartz vein, 40 centimetres parallel to the channel returned a value of 12.4 grams per tonne gold.
- Sample CH11-02 that was taken at the 340 foot mark of the main Q4 level from banded quartz vein, 30 centimetres parallel to the channel returned a value of 1.71 grams per tonne gold.
- Sample CH11-03 that was taken at the Q4-1 raise, i-drift from banded quartz, 30 centimetres parallel to the channel returned a value of 20.2 grams per tonne gold.
- Samples CH11-04 to CH11-06 from fault gauge at the 150 foot to 242 foot level of the main Q4 level, together with a grab sample from a muck pile of black slate with euhedral pyrite returned nominal values of between 0.02 grams per tonne gold and 0.24 grams per tonne gold.

On January 19, 2012, the Company announced that milling of the stockpiled material from the Cherry Hill Gold Mine would begin the next day at the Merlin mill in Grants Pass, Oregon. Approximately 200 tonnes of the initial 2,000 tonnes of material was to be processed over a two day period in order to determine the best methods for optimal recovery of gold and silver. In addition, processing of this initial batch of throughput would quantify the amounts, if any, of deleterious elements present in the tailings, which was subsequently shown to be below the minimum amounts allowed by the State of Oregon and allows for the tailings to be stored in the mill's tailings pond.

From the 210 tonnes of material processed, the Company received 10,120 pounds of flotation concentrate and 2,360 pounds of gravity concentrate via a Nelson concentrator. 1,260 pounds of the gravity concentrate was subsequently run across a shaker table in order to further process the material and create four smaller different concentrates. Representative samples of each shaker table concentrate were then sent for analysis.

On March 1, 2012, the Company announced that initial assays received from the first 1,260 pounds of the gravity circuit concentrates returned a weighted average of 15.21 ounces per tonne gold and 5.17 ounces per tonne silver from 1,260 pounds of mineralized material from the Cherry Hill Gold Mine.

The table below breaks down the assays of each concentrate created by the shaker table:

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

Sample ID	Weight (lbs)	Au (oz/T)*	Ag (oz/T)*	Contained ounces
CHM CONS - 1	32	542.00	181.00	8.67
CHM CONS - 2	141	8.39	3.31	0.59
CHM CONS - 3-1	122	1.95	0.65	0.12
CHM CONS - 3-2	28	3.89	1.53	0.05
CHM CONS - 4-1	675	0.29	0.14	0.10
CHM CONS - 4-2	262	0.37	0.14	0.05
Totals	1,260			9.58
Weighted Average		15.21	5.17	

* T = short tonnes (2,000 pounds)

The samples for the gravity concentrates were prepared and analyzed by ALS Chemex at their facilities in Vancouver, B.C. using their 'specialty assay procedure' (individual sample size consisted of 0.1 kilograms of material). Gold analyses were performed by Fire Assay Fusion (FA-FUSION) utilizing Gravimetric, AAS, or ICP finish depending on the concentration. Silver was analyzed as part of a multi-element ICP package using an aqua regia digestion.

On May 3, 2012, the Company announced that it had extracted approximately 2,000 tons of mineralized rock from Cherry Hill and that the Company intended to run 400 tons of material through the Grants Pass, Oregon mill in May to continue to determine the best methods for optimal recovery.

It also stated that proceeds from the recently announced private placement (see news release dated April 3rd, 2012) would be used to expand the main working (Q4- drift) at Cherry Hill to ten feet by ten feet and to purchase additional equipment such that mining will be trackless with the goal of increasing the mining rate to 1,000 to 3,000 tons per month. This expansion is expected to take up to 4 weeks and the Company anticipates commencing production of a minimum of 1,000 tons per month in June. Subsequent difficulties with the contract mill have since put the expansion plans on hold.

On September 6, 2012, the Company announced that it entered into an agreement in principle for the exclusive mining rights to a near-term producing gold mine located approximately 10 kilometres from the Company's existing, wholly-owned, Cherry Hill Gold Mine. The mine is held by a private American trust and consists of two patented load claims. The agreement provides Golden Sun with the exclusive underground mining rights for 20 years with a onetime payment of US\$25,000 and a 10% net profits interest on all production. The Company has been granted several months to complete due diligence which is intended to include detailed sampling and if required, mini bulk sampling. The private trust has held the property for approximately 60 years and historical assays provided to the Company from the mine (non 43-101 compliant) ranged from 1.6 to 18.0 ounces per tonne. After due diligence, the Company decided not to pursue with this opportunity any further.

On October 3, 2012, the Company announced that it had begun to truck its stockpiled material to Grants Pass, Oregon for processing at the Merlin contract mill. The transport company contracted to provide trucking services to the mill was faced with a number of obstacles from logistics to the inclement of weather which delayed delivery. On October 25, 2012 the Company entered into a contract for milling and paid the operators \$60,000 as an advance for milling services. The Company later learned that delays to the start of milling occurred as the mill required rehabilitation upon start-up.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

Leading up to the third mill run, the Company was diligent with its internal assaying as guidance of grade for its stockpile. In addition, the Company took the necessary steps in 2012 to establish expected recoveries from the contract mill as reported in previous news releases.

During the mill processing, the operators of the mill did not provide the Company with any numbers as requested. The Company subsequently stopped trucking and milling at approximately 740 tonnes. The Company had a representative on site for the beginning of the processing; however, after an unplanned shut down that was scheduled for several days and resulted in the Company's representative being away from the mill, a majority of the material was run through the mill without the Company's representative being present.

Upon the threat of legal action, the contractors provided the Company with results that did not equate to what the Company felt was reasonably expected. The Company's qualified person attended the mill after milling had stopped and took a number of samples for assaying of which the Company has serious concerns over. The Company plans to pursue this matter through their legal counsel and will act accordingly upon their advice.

To date, the Company has not started legal action as it is still attempting to investigate the situation.

Mining at Cherry Hill has yet to re-start as the Company is re-considering its milling options including the possibility of building its own pilot plant.

Ian Foreman, P.Geo., a director of the Company, is Golden Sun's Qualified Person, pursuant to National Instrument 43-101 for the Cherry Hill property.

Zacatecas, Mexico

The project consists of three separate properties: Mina San Jose; Salvador; and Zacatecas which are located approximately 15 kilometers northwest of the municipality of Zacatecas, the capital city of Zacatecas State, Mexico. The Mina San Jose property consists of one exploration concession of 40 hectares. The Salvador-Zacatecas property consists of the Salvador exploitation concession which is 32 hectares, while the adjacent Zacatecas exploration concession has 8.712 hectares for a total of 40.712 hectares. The Company owns 73% of the concessions in a joint venture with Impact Silver Corp. ("Impact") that owns the other 27%.

Concession	Title No.	Claim Type	Area (ha)	Date Registered
Mina San Jose	T-225854	Exploration	40.000	28-Oct-05
Salvador	T-181880	Exploration	32.000	16-Dec-87
Zacatecas	T-219098	Exploration	8.712	4-Feb-03

In August, 2008 Silver Sun engaged Tekhne Research Inc. to prepare a technical report on the Zacatecas Joint Venture. The operating partner during the period, Impact Silver Corp., had contracted Tekhne Research Inc. of Victoria, B.C., an arms' length company, on November 15, 2006 to assist in the design and execution of the Phase 1 surface evaluation and Phase 2 diamond drilling program on the Mina San Jose and Salvador-Zacatecas properties under the joint venture. Silver Sun received a technical report (the "Technical Report") dated August 21, 2008, as amended October 14, 2008, prepared by Edward M. Lyons, P.Geo of Tekhne Research Inc. titled "Exploration Phases 1 & 2: Surface Sampling & Diamond Drilling on the Mina San Jose & Salvador-Zacatecas Properties Zacatecas, Zacatecas State, Mexico", which summarized the results of the Phase 1 and Phase 2 surface and geological sampling on the Zacatecas property.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

The exploration program consisted of Phase 1 (surface sampling and geological sampling) and Phase 2 (drill program based on the Phase 1 results). For Mina San Jose, Phase 1 produced 45 surface dump and rock samples and Phase 2 had four diamond drill holes totaling 501.25 metres of NTW (61.2 mm diameter core) and 106 core samples. Salvador-Zacatecas Phase I work resulted in 17 dump and rock samples, while Phase 2 had 12 diamond drill holes (two were lost) totaling 1,314.5 metres with 193 samples. All samples were sent to ALS-Chemex Labs at Guadalajara, Mexico for sample preparation and the pulps were sent for analyses to ALS-Chemex in Vancouver, B.C.

The Technical Report (available on www.sedar.com) prepared by the Company's Qualified Person at the time, Edward M. Lyons, P. Geo. provided the following summary of the drill hole data results on the Zacatecas property:

The results for Mina San Jose showed Ag at 122 to 525 grams per tonne Ag as average samples and selected dump samples, specifically selected to show the best potential values, of 4,900 grams per tonne Ag with 6% Zn and 1-2% Pb. The drill results encountered the veins as zones to 1,340 grams per tonne Ag, 1.23 % Pb, and 1.18% Zn over 0.65 m true thickness. The drilling was reconnaissance in nature. The work suggests that the vein may be more coherent to the west and perhaps at depth. The Salvador-Zacatecas dump samples ran 100 to 288 grams per tonne Ag with selected material typically three to four times higher. Drill intersections returned a maximum of 382 grams per tonne Ag over 0.5 metres true width on the Salvador Vein and 275 grams per tonne Ag over 0.61 metres true width with less than 1% Pb and Zn respectively.

As of January 31, 2010, the Company had fulfilled its obligation to incur exploration expenditures of \$200,000. As a result of these expenditures, the Company had earned a 73% interest in the joint venture with Impact. The Company also announced that it had received the mining and reclamation permits required from the Mexican government in order to put the property into production; however, no plans were in place to follow through with production as a suitable milling facility—and hence economic assessment has not been identified.

On June 30, 2010, the Company announced the approval of mining and environmental permitting on their Zacatecas project through the Company's wholly owned Mexican subsidiary, Minera Plata del Sol S.A. de C.V. At that time the Company was in discussions with Impact regarding the option to process ore at their wholly-owned mill which is located 1,000 metres from the property.

On August 3, 2010, the Company announced that it had contracted SGS de Mexico S.A. de C.V to carry out metallurgical test work on the mineralized stockpiles from the Company's Zacatecas properties. The test program consisted of a Cyanide Leach Bottle-Roll Test to generate kinetic gold/silver extraction curves and to determine sodium cyanide and lime consumptions. Further, two flotation tests were performed on each sample to identify primary flotation, scavenger flotation and two cleaning stages. All concentrates were for Au, Ag, Pb, Zn, Cu and Fe. Results from the Metallurgical Test Program show the recovery for Ag at 47%.

The properties are registered in the name of Minera Aguila Plateada S.A. de C.V., which is a wholly owned subsidiary of Impact Silver Corp. The Company owns a 73% interest in the concessions pursuant to the Joint Venture Agreement between Alta Vista Ventures Ltd. ("Alta Vista") (formerly Yale Resources Ltd.) and Impact dated July 25, 2008. The Company acquired Alta Vista's interest in the Joint Venture Agreement pursuant to an Option Agreement with Alta Vista dated August 14, 2008 as amended on January 8, 2010.

On August 25, 2011, Impact Silver announced that it had agreed to sell all of its interests in Zacatecas, including their 27% ownership in the Zacatecas, San Jose, and Salvador concessions to Defiance Silver Corp.

On May 3, 2012, the Company announced that it was in ongoing discussions with its joint venture partner in order to transfer 100% of the titles of the concessions into the Company's Mexican subsidiary.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

Limited work has been undertaken at Zacatecas in 2012 and 2013.

Ian Foreman, P.Geo., a director of the Company, is Golden Sun's Qualified Person, pursuant to National Instrument 43-101 for the Zacatecas property.

Yoreme, Mexico

On December 2, 2010, the Company entered into an exploration and evaluation asset purchase agreement with Maggiore Capital Limited, pursuant to which the Company acquired one hundred percent (100%) right, title and interest in the Yoreme mineral claim. The property is 400 hectares in size and located in the Municipality of Alamos, State of Sonora, Mexico. The consideration paid for this exploration and evaluation asset was 2,500,000 common shares of the Company. The Company paid an additional 200,000 shares as a finders' fee on this purchase. The property is presently registered in the name of Minera Plata del Sol S.A. de C.V., which is a wholly owned subsidiary of the Company.

Follow-up sampling performed in conjunction with a technical report returned:

Initial sampling performed by the Company's Mexican subsidiary returned the following values:	Type	Width (m)	Ag (grams per tonne)	Pb (%)	Zn (%)
37459	Rock	2.0	569.3	1.63	6.04
37460	Dump	-	1,259.6	0.97	2.61
37461	Rock	2.0	1,768.6	0.29	0.74
37462	Rock	1.0	82.7	0.05	0.51
37464	Dump	-	85.9	2.02	2.62
37465	Rock	1.0	1,825.7	0.18	0.31

- 256.0 grams per tonne silver over 1.96 metres;
- 262.0 grams per tonne silver over 1.80 metres; and
- 126.0 grams per tonne silver over 2.60 metres.

On December 14, 2010, the Company announced that it had begun its Phase I work program on the property. The exploration work consisted of trenching, dewatering, and rehabilitating of historic workings with rock chip sampling of the trenches and underground workings.

The recommended Phase II was initially planned to consist of a multi-level, shallow diamond drilling program to intercept the interpreted higher grade silver ore shoots with the work program expected to begin in February, 2011, but that was subsequently changed.

On June 10, 2011, the Company entered into an agreement with Strachen Resources Ltd ("Strachen") for the conditional sale of the Company's Yoreme project for a total price of \$300,000, consisting of 2,500,000 common shares of Strachen and \$50,000 cash. On August 31, 2011, the Company and Strachen mutually agreed to terminate this conditional sale.

On May 3, 2012, the Company announced that field work at Yoreme had been successful in delineating extensions if the San Manuel vein along strike as soil surveys show multi-element anomalies along strike in both directions indicating that the strike length of the vein could be as much as one kilometre. Sampling of workings in the southern portion of the San Manuel vein returned the following results:

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

Location	Sample	Width (m)	Ag (grams per tonne)
Tiro 56	Channel	0.70	66.9
	Dump	dump	208.1
	Dump	dump	271.9
Tiro Jaime	Channel	3.30	102.0
	incl.	2.10	147.1
	incl.	1.30	179.3
Obra San Manuel	Channel	4.35	198.0
	incl.	1.80	316.5

13 line kilometres of geophysics identified an approximately 300 by 400 metre large chargeability anomaly immediately southwest of the San Manuel vein as well as a linear anomaly near the centre of the property. Follow up field work has yet to determine the cause of the larger anomaly, however work in the immediate vicinity of the linear anomaly resulted in the discovery of at least 3 sub parallel veins. These other veins are hosted within the intrusive as opposed to the San Manuel vein that is hosted within the contact of the intrusive and volcanic rocks.

No work has been undertaken on the property in 2013 due to difficult market conditions; consequently, the Company has recorded an impairment of \$300,000 for the property.

Ian Foreman, P.Geo., a director of the Company, is Golden Sun's Qualified Person, pursuant to National Instrument 43-101 for the Yoreme property.

SELECTED ANNUAL INFORMATION

The following table provides selected annual audited financial information that should be read in conjunction with the audited financial statements and notes:

	April 30 2013	April 30 2012	April 30 2011
Operational expenses	\$ 1,172,170	\$ 2,344,523	\$ 1,285,189
Other expenses (income)	\$ 245,448	\$ 590,344	\$ 157,096
Net and comprehensive loss for the year	\$ 1,405,767	\$ 2,924,327	\$ 1,442,285
Basic and diluted loss per share	\$ 0.03	\$ 0.06	\$ 0.04

RESULTS OF OPERATIONS

The Company's net loss for the year ended April 30, 2013 was \$1,406,767 as compared to a net loss of \$2,934,867 for the year ended April 30, 2012. The decrease in net loss is due mainly to reduced exploration activity as a result of difficult market conditions.

During the year ended April 30, 2013, bank charges and interest increased to \$4,340 from \$2,472 for the prior year prior reflecting poorer cash flow. Insurance costs increased this year to \$16,187 from \$8,334 last year.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)**Management's Discussion and Analysis**
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

Investor communication costs increased to \$77,580 from \$23,000 as management tried to elevate the Company's profile in the investment community to help raise funds. Salaries and benefits also increased to \$7,992 from \$6,563.

During the year ended April 30, 2013 all other expense categories decreased reflecting the reduction in exploration activity. Consulting fees were down from \$292,472 to \$202,900; exploration and evaluation costs were \$410,210 from \$1,100,200 for the previous year; office, administrative, and travel expenses decreased to \$115,338 from \$120,560 for the previous year; professional fees were \$124,419 from \$173,282; share-based compensation was \$139,392 for the year ended April 30, 2013 as compared to \$495,482 for the previous year; and transfer agent, listing, and filing fees decreased to \$32,439 from \$75,927.

The Company had interest income of only \$502 for the year ended April 30, 2013 as compared to \$4,112 for the previous year when the Company had more cash on hand invested in short-term deposits.

The Company had other income of \$64,195 as a result of recovering the cost of an insurance premium paid in a prior year.

Write-offs of exploration and evaluation assets were \$300,000 for the year ended April 30, 2013 as compared to \$564,000 for the previous year.

Lastly, the Company incurred a foreign exchange loss of \$10,145 this year compared to a loss of \$28,516 last year.

SUMMARY OF QUARTERLY RESULTS

Quarter Ended	Revenue	Net loss	Loss Per Share	
Q4/2013	April 30, 2013 \$	- \$	(368,515)	(\$0.01)
Q3/2013	January 31, 2013 \$	- \$	(472,782)	(\$0.02)
Q2/2013	October 31, 2012 \$	- \$	(326,933)	\$0.00
Q1/2013	July 31, 2012 \$	- \$	(249,388)	\$0.00
Q4/2012	April 30, 2012 \$	- \$	(951,179)	(\$0.02)
Q3/2012	January 31, 2012 \$	- \$	(852,688)	(\$0.02)
Q2/2012	October 31, 2012 \$	- \$	(415,306)	(\$0.01)
Q1/2012	July 31, 2011 \$	- \$	(705,154)	(\$0.01)

FOURTH QUARTER RESULTS OF OPERATIONS

The Company's net loss for the three months ended April 30, 2013 was \$368,515 as compared to a net loss of \$951,179 for the three months ended April 30, 2012.

Operational expenses were \$124,407 for the three months ended April 30, 2013 compared to \$355,075 for the same quarter last year. The decrease in net loss quarter to quarter is due mainly to reduced exploration activity as a result of difficult market conditions.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

Other income and expense items for the three months ended April 30, 2013 produced a loss of \$236,591 compared to \$611,699 for the same quarter last year. This decrease is due mainly to the reduced amount of write-offs of exploration and evaluation assets which were \$300,000 for the quarter ended April 30, 2013 as compared to \$564,000 for the quarter ended April 30, 2012. The Company also had other income of \$64,195 for the quarter ended April 30, 2013 as a result of recovering the cost of an insurance premium paid in a prior year.

Lastly, the Company incurred a foreign exchange loss of \$10,654 this quarter compared to a gain of \$5,485 for the same quarter last year.

LIQUIDITY

The Company does not have any cash flow from operations or any production of mineral resources; accordingly, it must rely on equity and/or debt financing to fund operations. The Company's access to exploration financing when the financing is not transaction specific is always uncertain. There can be no assurance of continued access to any equity and/or debt funding.

The Company's cash on hand increased to \$15,482 at April 30, 2013 from \$5,952 at April 30, 2012.

The Company had a working capital deficiency of \$14,328 at April 30, 2013 compared to a working capital deficiency of \$5,598 at April 30, 2012.

The Company's current asset balance of \$145,502 (April 30, 2012 - \$99,961) is comprised of cash of \$15,482 (April 30, 2012 - \$5,952), amounts receivable of \$63,971 (April 30, 2012 - \$1,470), goods and services tax receivable from the Canada Revenue Agency of \$21,688 (April 30, 2012 - \$80,443), an amount due from related party of \$12,500 (April 30, 2012 - \$nil), a loan receivable of \$20,432 (April 30, 2012 - \$nil), and prepaid expenses of \$11,429 (April 30, 2012 - \$12,096).

The Company's current liabilities total \$159,830 (April 30, 2012 - \$105,559) and is made up of outstanding accounts payable and accrued liabilities relating to administrative and exploration expenses.

As of the date of this MD&A, the Company has insufficient working capital to meet its ongoing financial obligations for the coming year. There can be no assurance that future financings will be available to the Company or, if it is, that it will be available on terms acceptable to the Company and will be sufficient to fund cash needs. If the Company is unable to obtain the financing necessary to support its operations, it may be unable to continue as a going concern. The Company currently has no commitments for any credit facilities such as revolving credit agreements or lines of credit that could provide additional working capital, and substantial doubt exists regarding the Company's ability to continue as a going concern. The Company has no long term debt, capital lease obligations, operating leases, or any other long term obligations.

PROPOSED TRANSACTIONS

There are no proposed transactions regarding assets or business acquisitions or disposition, other than those in the ordinary course of business, before the board of directors for consideration.

OFF-STATEMENT OF FINANCIAL POSITION ARRANGEMENTS

Alta Vista Ventures Ltd. is a public company with directors in common. Alta Vista Ventures Ltd. charges rent to the Company.

Foremost Geological Consulting Ltd. is a private business owned by a director, Ian Foreman. Foremost Geological Consulting Ltd. provides consulting services to the Company. At April 30, 2013, there is \$5,425 (April 30, 2012 - \$nil) owing to Foremost Geological Consulting Ltd. included in the amount due to related parties. On April 4, 2013, Ian Foreman was granted 500,000 stock options at an exercise price of \$0.10 per share for a period of five years. These options have a fair value of \$8,542.

Foremost Management Services Inc. is a private company owned by two directors of the Company, Mark McLeary and Ian Foreman. Foremost Management Services Inc. provides office administration services to the Company.

McLeary Capital Management, Inc. is a private company controlled by the President and CEO, Mark McLeary. McLeary Capital Management, Inc. provides consulting services to the Company as detailed in note 12. At April 30, 2013, there is \$10,845 (April 30, 2012 - \$nil) owing to McLeary Capital Management, Inc. included in the amount due to related parties. On April 4, 2013, Mark McLeary was granted 1,000,000 stock options at an exercise price of \$0.10 per share for a period of five years. These options have a fair value of \$17,085.

T. St. Denis, Inc. is a private accounting firm owned by the current Chief Financial Officer, Tracey A. St. Denis. T. St. Denis, Inc. provides accounting services to the Company. At April 30, 2013, there is \$10,970 (April 30, 2012 -

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

\$nil) owing to T. St. Denis, Inc. included in the amount due to related parties and \$12,500 (April 30, 2012 - \$nil) included in accounts payable and accrued liabilities. On September 28, 2012, Tracey St. Denis was granted 200,000 stock options at an exercise price of \$0.12 per share for a period of one year. These options have a fair value of \$11,371.

COMMITMENTS

As at April 30, 2013, the Company had the following obligations:

On January 1, 2013, the Company entered into an indefinite term contract with Foremost Management Services Inc., a private company owned by two directors of the Company, Mark McLeary and Ian Foreman. Foremost Management Services Inc. will provide administration services to the Company for a fee equal to 10% of the monthly overhead. The contract may be cancelled by either party with two months' notice at any time after the first year.

On May 1, 2011 the Company entered into an indefinite term contract with McLeary Capital Management, Inc. (the "Consultant"), a private company controlled by the President and CEO of the Company, for the Consultant to continue to act as President and Chief Executive Officer and Director of the Company. A monthly consulting fee of \$10,000 plus GST is payable to the Consultant. The contract may be cancelled by either party on 30 days written notice and, if cancelled by the Company, by payment of an amount equivalent to two years annual salary. On termination of the contract the Consultant will be immediately retained by the Company as a non-paid advisor/consultant to the Company until May 1, 2016 or for such time as the Consultant still holds unexercised stock options in the Company. On exercise of the Consultant's options, the relationship between the Consultant and the Company will cease.

The Company has a rental and administrative services agreement with a company that shares directors and officers, Alta Vista Ventures Ltd., and requires the payment of \$750 per month plus GST. The agreement is in effect on a month to month basis and may be terminated with 30 days written notice in accordance with the provisions of the agreement.

Effective September 1, 2011, the Company entered into a three year storage rental agreement for an annual fee of US\$8,400 for the Cherry Hill property in California. The annual fee is payable at the start of each year. At the end of the initial rental period, the agreement shall renew annually and continue on a year-to-year basis, subject to termination of 60 days written notice by either party.

CONFLICTS OF INTEREST

The Company's directors and officers may serve as directors or officers, or may be associated with, other reporting companies, or have significant shareholdings in other public companies. To the extent that such other companies may participate in business or asset acquisitions, dispositions, or ventures in which the Company may participate, the directors and officers of the Company may have a conflict of interest in negotiating and concluding on terms with respect to the transaction. If a conflict of interest arises, the Company will follow the provisions of the Business Corporations Act (BC) ("Corporations Act") dealing with conflict of interest. These provisions state

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

that where a director has such a conflict, that director must, at a meeting of the Company's directors, disclose his or her interest and refrain from voting on the matter unless otherwise permitted by the Corporations Act. In accordance with the laws of the Province of British Columbia, the directors and officers of the Company are required to act honestly, in good faith, and in the best interest of the Company.

FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair value of financial instruments

The carrying values of cash, amounts receivable, due from related party, loan receivable, accounts payable and accrued liabilities, and due to related parties approximate their carrying values due to the immediate or short-term nature of these instruments.

Fair value hierarchy

IFRS 7, Financial Instruments: Disclosures, establishes a fair value hierarchy that prioritizes the input to valuation techniques used to measure fair value as follows:

- Level 1 – cash and quoted prices (unadjusted) in active markets for identical assets or liabilities;
- Level 2 – inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. derived from prices); and
- Level 3 – inputs for the asset or liability that are not based on observable market data (unobservable inputs).

Financial risk management

The Company's risk exposures and the impact on the Company's financial instruments are summarized below:

Credit risk

Credit risk is the risk that one party to a financial instrument will fail to discharge an obligation and cause the other party to incur a financial loss. Financial instruments that potentially subject the Company to credit risk consist primarily of cash, amounts receivable, due from related party, and loan receivable.

The Company limits its exposure to credit risk by placing its cash with a high credit quality financial institution in Canada, the United States, and Mexico.

Management considers the risk of non-performance related to cash, amounts receivable, due from related party, and loans receivable to be minimal.

Liquidity risk

Liquidity risk is the risk that the Company will encounter difficulty in raising funds to meet commitments associated with financial instruments and with property exploration and development. The Company manages liquidity risk by trying to maintain adequate cash balances.

The Company's expected source of cash flow in the upcoming year will be through equity and/or debt financing. Cash on hand at April 30, 2013 and expected cash flows for the next 12 months are not sufficient to fund the Company's ongoing operational needs. The Company will need funding through equity or debt financing, entering into joint venture agreements, or a combination thereof.

Accounts payable and accrued liabilities and amounts due to related parties are classified as current and are due within twelve months of the consolidated statements of financial position date.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, and commodity and equity prices.

Interest rate risk

Interest rate risk consists of two components: to the extent that payments made or received on the Company's monetary assets and liabilities are affected by changes in the prevailing market interest rates, the Company is exposed to interest rate cash flow risk; and to the extent that changes in prevailing market rates differ from the interest rate in the Company's monetary assets and liabilities, the Company is exposed to interest rate price risk.

Current financial assets and financial liabilities are generally not exposed to interest rate risk because of their short-term nature and maturity. The Company is not exposed to interest rate price risk as it does not have any cash and cash equivalents at April 30, 2013 which bear interest. The Company does have a loan receivable which bears interest with no material risk.

Foreign currency risk

Foreign currency risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate due to changes in foreign exchange rates. The Company is exposed to foreign currency risk to the extent that monetary assets and liabilities are denominated in a foreign currency.

The Company is exposed to foreign currency risk with respect to cash, amounts receivable, and accounts payable and accrued liabilities, as a portion of these amounts are denominated in US Dollars and Mexican Pesos as follows:

	April 30, 2013		April 30, 2012	
	USD	MXN	USD	MXN
Cash/bank overdraft	\$ 8,165	\$ 13,430	\$ 2,210	\$ 15,657
Amounts receivable	-	-	1,498	-
Accounts payable and accrued liabilities	(32,697)	-	(28,171)	-
	\$ (24,532)	\$ 13,430	\$ (24,463)	\$ 15,657
Rate to convert to \$1 CDN	\$ 1.0072	\$ 0.0830	\$ 0.9810	\$ 0.0758

The Company manages foreign currency risk by minimizing the value of financial instruments denominated in foreign currency. The Company has not entered into any foreign currency contracts to mitigate this risk.

Capital risk management

The Company manages its capital to ensure that it will be able to continue as a going concern while maximizing the return to stakeholders through a suitable debt and equity balance appropriate for an entity of the Company's size and status. The Company's overall strategy remains unchanged from last year.

The capital structure of the Company consists of equity attributable to common shareholders, comprised of issued capital, warrants, options, reserves, and deficit. The availability of new capital will depend on many factors including a positive mineral exploration environment, positive stock market conditions, the Company's track record, and the experience of management. The Company is not subject to any external covenants on its capital.

The carrying values of cash, amounts receivable, bank overdraft, and accounts payable and accrued liabilities approximate their carrying values due to the immediate or short-term nature of these instruments.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

OTHER RISKS AND UNCERTAINTIES

The Company is an exploration stage company with respect to its mineral interests. Based on the information available to date, the Company has not yet determined whether its mineral interests contain economically recoverable reserves. The recoverability of the amounts shown for mineral interests is dependent upon the confirmation of economically recoverable reserves, the ability of the Company to obtain necessary financing to successfully complete their development, and upon future profitable production.

In conducting its business, the Company is subject to a number of other risks and uncertainties that could have a material adverse effect on the Company's business prospects or financial condition that could result in a delay or indefinite postponement in the development of the Company's mineral interests.

Risks associated with exploration stage companies

Exploring for mineral resources involves a variety of operational, financial, and regulatory risks that are typical in the natural resource industry. The Company has not commenced commercial operations and has not proven history of performance, earnings, or success. There is no guarantee that the Company will ever be able to achieve profitable results or successfully execute its business plan. The Company's Common Shares must be considered speculative primarily due to the nature of the Company's business and early stage of development. The Company has no revenue or income from operations. The Company has limited capital resources and has to rely upon the sale of equity and/or debt securities for cash required for exploration and development purposes, for acquisitions, and to fund the administration of the Company. Since the Company does not expect to generate any revenues from operations in the near future, it must continue to rely upon the sales of its equity or debt securities or joint venture agreements to raise capital. There can be no assurance that financing, whether equity or debt, will be available to the Company in the amount required by the Company at any particular time or for any period, and that such financing can be obtained on terms satisfactory to the Company.

Exploration and development

At this time, the Company's primary mineral property is in the exploration stage and the Company does not have an operating history with respect to its exploration activities. Exploration and development of mineral resources involves a high degree of risk and few properties which are explored are ultimately developed into producing properties. The amounts attributed to the Company's interest in its properties as reflected in its financial statements represent acquisition and exploration expenses and should not be taken to represent realizable value. There is no assurance that the Company's exploration and development activities will result in any discoveries of commercial bodies of ore. The long term profitability of the Company's operations will be in part directly related to the cost and success of its exploration programs which may be affected by a number of factors such as unusual or unexpected geological formations, and other conditions.

Property title

Although the Company believes it has exercised commercially reasonable due diligence with respect to determining title to properties it owns, controls, or has the right to acquire by option, there is no guarantee that title to such properties will not be challenged or impugned. The Company's mineral interests may be subject to prior unrecorded agreements or transfers or native land claims, and title may be affected by undetected defects. There may be valid challenges to the title of the Company's mineral interests which, if successful, could impair development and operations. This situation may be exacerbated due to the large number of title transfers

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)**Management's Discussion and Analysis**
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

historically involved with some properties.

Licenses and permits

The Company will require licenses and permits from various governmental authorities regarding the Company's mineral interests. There can be no assurance that the Company will be able to obtain all necessary licenses and permits that may be required to carry out exploration, development, and mining operations for its mineral interests. Failure to obtain and maintain such licenses and permits may adversely affect the Company's business as the Company would be unable to legally conduct its intended exploration and development work which may result in its losing its interest in the subject property.

Operating hazards and risks

Fires, power outages, labour disputes, flooding explosions, cave-ins, landslides, and the inability to obtain suitable or adequate machinery, equipment, or labour are some of the risks involved in exploration programs. Unknowns with respect to geological structures and other conditions are involved. Existing and future environmental laws may cause additional expense and delays in the activities of the Company, and may render the Company's properties uneconomic. The Company has no liability insurance and the Company may become subject to liability for pollution, cave-ins, or hazards against which it cannot insure, or against which it may elect not to insure. The payment of such liabilities may have a material, adverse effect of the Company's financial position.

Competition

The mining industry is intensely competitive and the Company must compete in all aspects of its operations with a substantial number of other corporations which have greater technical and financial resources. The Company may be unable to acquire additional attractive mining properties on terms it considers acceptable.

Profitability of operations

The Company does not have profitable operations at this time and it should be anticipated that it will operate at a loss until such time as production is achieved from its properties, if production is in fact ever achieved. Investors also cannot expect to receive any dividends on their investment in the foreseeable future.

Foreign currency risk

At this time, the Company's primary mineral property is located in the United States. Future changes in exchange rates could materially affect the viability of exploring and development this property.

Market risks

Even if the Company's exploration programs are successful, factors beyond the control of the Company may affect the marketability of any mineral products discovered. Mineral prices have fluctuated widely in recent years. The marketability and price of minerals which may be produced or acquired by the Company will be affected by numerous factors beyond the control of the Company. These factors include delivery uncertainties related to the proximity of its reserves to processing facilities, and extensive government regulation relating to price, taxes, royalties, allowable production land tenure, the import and export of minerals, and many other aspects of the

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)**Management's Discussion and Analysis**
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

mining business. Declines in mineral prices may have a negative effect of the Company.

Future financings

If the Company's exploration programs are successful, additional funds will be required for further exploration and development to place a property into commercial production. The Company's available sources of funds are: existing cash; the further sale of equity capital; and the offering by the Company of an interest in its properties to be earned by another party or parties carrying out further exploration or development thereof. There is no assurance such sources will continue to be available on favourable terms or at all. If available, future equity financings may result in dilution to current shareholders.

Going concern

The Company's financial statements have been prepared on a going concern basis which assumes that the Company will be able to realize its assets and discharge its liabilities in the normal course of business for the foreseeable future. The continuing operations of the Company are dependent upon its ability to obtain the necessary financing to meet its on-going commitments and further its mineral exploration programs.

SIGNIFICANT ACCOUNTING POLICIES**Basis of consolidation**

These consolidated financial statements include the accounts of the Company and its Mexican and American subsidiaries:

	Ownership Interest	Jurisdiction	Nature of Operations
Minera Plata Del Sol S.A. de C.V.	100%	Mexico	Exploration Company
Cherry Hill Holdings, LLC	100%	Wyoming, USA	Holding Company
Golden Sun, LLC	100%	California, USA	Holding Company
Lucky Boy Resources, LLC	100%	California, USA	Exploration Company

Intercompany balances and transactions, including unrealized income and expenses arising from intercompany transactions, are eliminated in preparing the consolidated financial statements.

Financial instruments

Financial assets and financial liabilities are recognized on the consolidated statements of financial position when the Company becomes a party to the contractual provisions of the financial instrument. The Company does not have any derivative financial instruments.

Financial assets

The Company classifies its financial assets into one of the following categories at initial recognition, depending on the purpose for which the asset was acquired. The Company's accounting policy for each category is as follows:

Fair value through profit or loss

This category comprises derivatives, or financial assets acquired or incurred principally for the purpose of selling

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)**Management's Discussion and Analysis**
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

or repurchasing in the near term. They are carried on the consolidated statements of financial position at fair value, with changes in fair value recognized in the consolidated statement of comprehensive loss. Cash is classified as a fair value through profit and loss financial asset.

Loans and receivables

These assets are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market. They are carried at amortized cost less any provision for impairment. Individually significant receivables are considered for impairment when they are past due or when other objective evidence is received that a specific counterparty will default. Amounts receivable, due from related party, and loan receivable are classified as loans and receivables.

Held-to-maturity investments

These assets are non-derivative financial assets with fixed or determinable payments and fixed maturities that the Company's management has the positive intention and ability to hold to maturity. These assets are measured at amortized cost using the effective interest rate method. If there is objective evidence that the investment is impaired, determined by reference to external credit ratings and other relevant indicators, the financial asset is measured at the present value of estimated future cash flows. Any changes to the carrying amount of the investment, including impairment losses, are recognized on the consolidated statements of comprehensive loss. The Company has not classified any financial assets as held-to-maturity investments.

Available-for-sale

Non-derivative financial assets not included in the above categories are classified as available-for-sale. They are carried at fair value with changes in fair value recognized directly in other comprehensive income or loss ("OCI"). Where a decline in the fair value of an available-for-sale financial asset constitutes objective evidence of impairment, the amount of the loss is removed from OCI and recognized in the statement of comprehensive loss. The Company has not classified any financial assets as available-for-sale.

Transaction costs associated with fair value through profit or loss financial assets are expensed as incurred, while transaction costs associated with all other financial assets are included in the initial carrying amount of the asset.

All financial assets except for those at fair value through profit or loss are subject to review for impairment at least at each reporting date. Financial assets are impaired when there is any objective evidence that a financial asset or a group of financial assets is impaired. Different criteria to determine impairment are applied for each category of financial assets, which are described above.

Financial liabilities

The Company classifies its financial liabilities into one of two categories depending on the purpose for which the liability was incurred. The Company's accounting policy for each category is as follows:

Fair value through profit or loss

This category comprises derivatives, or liabilities acquired or incurred principally for the purpose of selling or repurchasing in the near term. They are carried on the consolidated statements of financial position at fair value, with changes in fair value recognized on the consolidated statements of comprehensive loss. The Company has not classified any financial liabilities as fair value through profit and loss.

Other financial liabilities

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

This category includes accounts payable and accrued liabilities, which are recognized at amortized cost. The Company has classified accounts payable and accrued liabilities and amounts due to related parties as other financial liabilities.

Cash and cash equivalents

Cash and cash equivalents on the consolidated statements of financial position is comprised of cash at banks and on hand, and short term deposits with an original maturity of three months or less, which are readily convertible into a known amount of cash.

Exploration and evaluation assets

The Company is in the exploration stage with respect to its investment in exploration and evaluation assets. Acquisition costs for exploration and evaluation assets, net of recoveries, are capitalized on a property-by-property basis. Acquisition costs include cash consideration and the value of common shares, based on recent issue prices, issued for exploration and evaluation assets pursuant to the terms of the agreement. Exploration expenditures, net of recoveries, are charged to operations as incurred. After a property is determined by management to be commercially feasible, acquisition costs on the property will be transferred to property, plant, and equipment as mine and mill costs. Prior to transfer the assets will be tested for impairment. The costs related to a property from which there is production, will be depleted and amortized using the unit-of-production method.

An exploration and evaluation asset acquired under an option agreement where payments are made at the sole discretion of the Company is capitalized at the time of payment. Option payments received are treated as a reduction of the carrying value of the related acquisition cost for the exploration and evaluation asset until the payments are in excess of acquisition costs, at which time they are then credited to operations. Option payments are at the discretion of the optionee; accordingly, they are accounted for when receipt is reasonably assured.

Capitalized acquisition costs are assessed for impairment if facts and circumstances suggest that the carrying amount exceeds the recoverable amount. When there is little prospect of further work on a property being carried out by the Company or its partners, when a property is abandoned, or when the capitalized costs are no longer considered recoverable, the related property costs are written down to management's estimate of their net recoverable amount.

The recoverability of the carrying amount of exploration and evaluation assets is dependent on successful development and commercial exploitation, or alternatively, the sale of the respective areas of interest.

Property, plant, and equipment

Property, plant, and equipment ("PPE") is carried at cost, less accumulated depreciation and accumulated impairment losses.

The cost of an item of PPE consists of the purchase price, any costs directly attributable to bringing the asset to the location and condition necessary for its intended use, and an initial estimate of the costs of dismantling and removing the item and restoring the site on which it is located.

PPE is depreciated annually at the following rates, when the asset becomes available for use:

Mine and mill equipment	30% straight line
Office and computer equipment	30% straight line
Vehicles	30% straight line

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

An item of PPE is derecognized upon disposal or when no future economic benefits are expected to arise from the continued use of the asset. Any gain or loss arising on disposal of the asset, determined as the difference between the net disposal proceeds and the carrying amount of the asset, is recognized on the consolidated statements of comprehensive loss.

Where an item of PPE comprises major components with different useful lives, the components are accounted for as separate items of PPE. Expenditures incurred to replace a component of an item of PPE that is accounted for separately, including major inspection and overhaul expenditures, are capitalized.

Impairment

At each financial position reporting date, the carrying amounts of the Company's assets are reviewed to determine whether there is any indication that those assets are impaired. If any such indication exists, the recoverable amount of the asset is estimated in order to determine the extent of the impairment, if any. Where the asset does not generate cash flows that are independent from other assets, the Company estimates the recoverable amount of the cash-generating unit to which the asset belongs.

An asset's recoverable amount is the higher of fair value less costs to sell and value in use. Fair value is determined as the amount that would be obtained from the sale of the asset in an arm's length transaction between knowledgeable and willing parties. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. If the recoverable amount of an asset or cash generating unit is estimated to be less than its carrying amount, the carrying amount of the asset is reduced to its recoverable amount and the impairment loss is recognized on the consolidated statements of comprehensive loss.

Where an impairment loss subsequently reverses, the carrying amount of the asset (or cash-generating unit) is increased to the revised estimate of its recoverable amount, as long as the increased carrying amount does not exceed the carrying amount that would have been determined had no impairment loss been recognized for the asset (or cash-generating unit) in prior years. A reversal of an impairment loss is recognized immediately on the consolidated statements of comprehensive loss.

Common shares

Common shares are classified as equity. Transaction costs directly attributable to the issue of common shares and share options are recognized as a deduction from equity, net of any tax effects.

Equity units

Proceeds received on the issuance of units, comprised of common shares and warrants, are allocated on the residual value method; proceeds are allocated to the common shares up to their fair value, as determined by the current quoted trading price on the announcement date, and the balance, if any, to the reserve for warrants.

Non-monetary consideration

Where share capital is issued, or received, as non-monetary consideration and the fair value of the asset received, or given up is not readily determinable, the fair market value of the shares is used to record the transaction. The fair market value of the shares is based on the trading price of those shares on the appropriate stock exchange on the date of the agreement to issue or receive shares as determined by the board of directors.

Share-based compensation

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

The share option plan allows Company employees and consultants to acquire shares of the Company. The fair value of options granted is recognized as an employee or consultant expense with a corresponding increase in equity. An individual is classified as an employee when the individual is an employee for legal or tax purposes (direct employee) or provides services similar to those performed by a direct employee.

The fair value of employee options is measured at grant date and the fair value of non-employee options is at the date or over the period such services are received. Each tranche of employee and non-employee options granted is recognized using the graded vesting method over the period during which the options vest. The fair value of the options granted is measured using the Black-Scholes option pricing model taking into account the terms and conditions upon which the options were granted. At each financial position reporting date, the amount recognized as an expense is adjusted to reflect the actual number of share options that are expected to vest.

Share-based payments granted to non-employees that are related to the issuance of shares are recorded as a reduction of share capital. All share-based payments are reflected in equity reserves, until exercised. Upon exercise, shares are issued from treasury and the amount reflected in the equity reserve is credited to share capital, adjusted for any consideration paid.

Equity reserves

Where share options or warrants expire or are cancelled, the fair value previously recognized is transferred from the equity reserve to accumulated deficit.

Loss per share

The Company presents basic and diluted loss per share data for its common shares, calculated by dividing the loss attributable to common shareholders of the Company by the weighted average number of common shares outstanding during the period. Diluted loss per share is determined by adjusting the loss attributable to common shareholders and the weighted average number of common shares outstanding for the effects of all dilutive potential common shares.

Provisions

Provisions are recognized where a legal or constructive obligation has been incurred as a result of past events; it is probable that an outflow of resources embodying economic benefit will be required to settle the obligation; and a reliable estimate of the amount of the obligation can be made. If material, provisions are measured at the present value of the expenditures expected to be required to settle the obligation.

An obligation to incur restoration, rehabilitation, and environmental costs arises when environmental disturbance is caused by the exploration, development, or ongoing production of an exploration and evaluation asset interest. Such costs arising from the decommissioning of plant and other site preparation work, discounted to their net present value, are provided for and capitalized at the start of each project to the carrying amount of the asset, as soon as the obligation to incur such costs arises. Discount rates using a pre-tax rate that reflects the time value of money are used to calculate the net present value. Subsequent to initial measurement, the obligation is adjusted at the end of each reporting period to reflect the passage of time and changes in the estimated future cash flows underlying the obligation. The increase in the provision due to the passage of time is recognized as a

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

finance cost and increases/decreases due to changes in the estimated future cash flows to decommission the asset are capitalized. Actual costs incurred upon settlement of the site restoration obligations are charged against the provision to the extent the provision was established.

Income taxes

Income tax on the profit or loss for the years presented comprises current and deferred tax. Income tax is recognized in profit or loss except to the extent that it relates to items recognized in other comprehensive income or loss or directly in equity, in which case it is recognized in other comprehensive income or loss or equity.

Current tax expense is the expected tax payable on the taxable income for the year, using tax rates enacted or substantively enacted at year end, adjusted for amendments to tax payable with regards to previous years.

Deferred tax is provided using the statement of financial position liability method, providing for unused tax loss carry forwards and temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. The following temporary differences are not provided for: goodwill not deductible for tax purposes; the initial recognition of assets or liabilities that affect neither accounting nor taxable profit; and differences relating to investments in subsidiaries, associates, and joint ventures to the extent that they will probably not reverse in the foreseeable future. The amount of deferred tax provided is based on the expected manner of realization or settlement of the carrying amount of assets and liabilities, using tax rates enacted or substantively enacted at the statement of financial position date.

A deferred tax asset is recognized only to the extent that it is probable that future taxable profits will be available against which the asset can be utilized. To the extent that the Company does not consider it probable that a future tax asset will be recovered, it provides a valuation allowance against that excess.

Additional income taxes that arise from the distribution of dividends are recognized at the same time as the liability to pay the related dividend.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to set off current tax assets against current tax liabilities and when they relate to income taxes levied by the same taxation authority and the Company intends to settle its current tax assets and liabilities on a net basis.

CRITICAL ACCOUNTING ESTIMATES

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized prospectively from the period in which the estimates are revised. The following are the key estimate and assumption uncertainties that have a significant risk of resulting in a material adjustment within the next financial year:

Impairment of assets

When there are indications that an asset may be impaired, the Company is required to estimate the asset's recoverable amount. Recoverable amount is the greater of value in use and fair value less costs to sell. Determining the value in use requires the Company to estimate expected future cash flows associated with the asset and a suitable discount rate in order to calculate present value. \$300,000 in impairments of non-financial assets have been recorded for the year ended April 30, 2013 (April 30, 2012 - \$564,000).

Useful life of property, plant, and equipment

Property, plant, and equipment are depreciated over the estimated useful life of the assets. Changes in the estimated useful lives could significantly increase or decrease the amount of depreciation recorded during the

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)**Management's Discussion and Analysis**
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

year and the carrying value of equipment. Total carrying value of property, plant and equipment at April 30, 2013 is \$94,462 (April 30, 2012 - \$134,946).

Share-based compensation

Management is required to make certain estimates when determining the fair value of stock options awards, and the number of awards that are expected to vest. These estimates affect the amount recognized as share-based compensation in the Company's consolidated statements of comprehensive loss. For the year ended April 30, 2013, the Company recognized share-based compensation expense of \$139,392 (April 30, 2012 - \$495,482).

CRITICAL JUDGMENTS USED IN APPLYING ACCOUNTING POLICIES

In the preparation of these consolidated financial statements, management has made judgments, aside from those that involve estimates, in the process of applying the accounting policies. The following critical judgments can have an effect on the amounts recognized in the consolidated financial statements:

Exploration and evaluation assets

Management is required to apply judgment in determining whether technical feasibility and commercial viability can be demonstrated for its exploration and evaluation assets. Once technical feasibility and commercial viability of a property can be demonstrated, it is reclassified from exploration and evaluation assets and subject to different accounting treatment. As at April 30, 2013 and April 30, 2012, management had determined that no reclassification of exploration and evaluation assets was required.

Income taxes

The measurement of income taxes payable and deferred income tax assets and liabilities requires management to make judgments in the interpretation and application of the relevant tax laws. The actual amount of income taxes only becomes final upon filing and acceptance of the tax return by the relevant authorities, which occurs subsequent to the issuance of the annual consolidated financial statements.

Foreign currency translation

In accordance with IAS 21 "The Effects of Changes in Foreign Exchange Rates", management determined that the functional currency of Lucky Boy Resources LLC and Golden Sun LLC is the US Dollar and for all other entities within the group, the functional currency is the Canadian dollar, as these are the currencies of the primary economic environment in which the companies operate.

NEW ACCOUNTING STANDARDS AND INTERPRETATIONS NOT YET ADOPTED

The following accounting pronouncements have been released but have not yet been adopted by the Company:

IFRS 9 Financial Instruments

In November 2009, the IASB issued, and subsequently revised in October 2010, IFRS 9 Financial Instruments (IFRS 9) as a first phase in its ongoing project to replace IAS 39. IFRS 9, which is to be applied retrospectively, is effective for annual periods beginning on or after January 1, 2015, with earlier application permitted.

IFRS 9 uses a single approach to determine whether a financial asset is measured at amortized cost or fair value, replacing the multiple rules in IAS 39. The approach in IFRS 9 is based on how an entity manages its financial

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

instruments in the context of its business model and the contractual cash flow characteristics of the financial assets. The new standard also requires a single impairment method to be used, replacing the multiple impairment methods in IAS 39. The standard also adds guidance on the classification and measurement of financial liabilities.

Management has not yet determined the potential impact the adoption of IFRS 9 will have on the Company's consolidated financial statements.

IFRS 10 Consolidated Financial Statements

In May 2011, the IASB issued IFRS 10 Consolidated Financial Statements (IFRS 10). IFRS 10, which is to be applied retrospectively, is effective for annual periods beginning on or after January 1, 2013, with earlier application permitted.

IFRS 10 replaces Standing Interpretations Committee 12 Consolidation – Special Purpose Entities (SIC 12) and IAS 27 Consolidated and Separate Financial Statements (IAS 27). IFRS 10 eliminates the current risk and rewards approach and establishes control as the single basis for determining the consolidation of an entity. The standard provides guidance on how to apply the control principles in a number of situations, including agency relationships and holding potential voting rights.

Management has not yet determined the potential impact that the adoption of IFRS 10 will have on the Company's financial statements.

IFRS 13 Fair Value Measurement

In May 2011, the IASB issued IFRS 13 Fair Value Measurement (IFRS 13). IFRS 13, which is to be applied prospectively, is effective for annual periods beginning on or after January 1, 2013, with earlier application permitted.

IFRS 13 defines fair value, provides a framework for measuring fair value, and includes disclosure requirements for fair value measurements. IFRS 13 will be applied in most cases when another IFRS requires (or permits) fair value measurement.

Management has not yet determined the potential impact that the adoption of IFRS 13 will have on the Company's financial statements.

Other

In June 2011, the IASB issued amendments to IAS 1 Presentation of Financial Statements, to revise the way in which other comprehensive income is presented. The Company does not believe the changes resulting from the amended standard will have an impact on its financial statements. The amended standard is effective for annual periods beginning on or after July 1, 2012.

In June 2011, the IASB issued amendments to IAS 19 Employee Benefits, with revised requirements for pensions and other postretirement benefits, termination benefits, and other changes. The Company does not believe the changes resulting from these amendments are relevant to its financial statements. The amended standard is effective for annual periods beginning on or after January 1, 2013.

In May 2011, the IASB issued IFRS 11 Joint Arrangements, in addition to IFRS 10 and IFRS 12 as discussed above. The Company does not believe the changes resulting from this new standard are relevant to its financial statements. IFRS 11 is effective for annual periods beginning on or after January 1, 2013.

GOLDEN SUN MINING CORP.
(formerly Silver Sun Resource Corp.)

Management's Discussion and Analysis
(Expressed in Canadian Dollars)

For the Year Ended April 30, 2013

In October 2011, the IASB issued IFRIC 20 Stripping Costs in the production phase of a surface mine. The Company does not believe the changes resulting from this new standard are relevant to its financial statements. IFRIC 20 is effective for annual periods beginning on or after January 1, 2013.

In January 2013, the IASB issued amendments to IAS 27 Separate Financial Statements, which aligns the new consolidation guidance prescribed in IFRS 10, Consolidated Financial Statements, as it applies to investments in subsidiaries, joint ventures, and associates when an entity either elects or is required by local regulations to prepare separate financial statements in accordance with IFRS.

In January 2013, the IASB issued amendments to IAS 28 Investments in Associates and Joint Ventures, which was amended as a consequence of the issue of IFRS 10, Consolidated Financial Statements; IFRS 11, Joint Arrangements; and IFRS 12, Disclosure of Interests in Other Entities. IAS 28 provides the accounting guidance for investments in associates and sets out the requirements for the application of the equity method when accounting for investments in associates and joint ventures.
