

#### MANAGEMENT'S DISCUSSION

## AND ANALYSIS OF FINANCIAL CONDITION

## AND RESULTS OF OPERATIONS

#### Years ended December 31, 2010 and 2009 (Stated in \$CAD)

The following MD&A of Homeland Uranium Inc. contains information concerning the company's business strategies, capabilities, financial results and an overview of the outlook for the company and the industry as at May 2, 2011. The consolidated financial statements, together with the accompanying note disclosure, which have been prepared in accordance with Canadian GAAP, also contain information that supplements this discussion. The MD&A should be read in conjunction with the company's consolidated financial statements for the years ended December 31, 2010 and 2009. All financial balances are stated in Canadian dollars, the company's functional currency. All public filings of the company are available on SEDAR at <u>www.sedar.com</u>.

The following discussion contains forward-looking statements that involve numerous risks and uncertainties. Actual results of the company could differ materially from those discussed in the forward-looking statements. These risks and uncertainties are highlighted under "Risk Factors" and "Forward-Looking Statements" found in this document, further below.

#### Overview

Homeland Uranium Inc. is development stage company engaged in the business of acquisition and exploration of uranium resource properties, currently in Niger, West Africa and formerly in Utah and Colorado, USA. The company, incorporated in December, 2006 under the Ontario Business Corporations Act, is a reporting issuer subject to the rules and regulations of the Ontario Securities Commission. As a reporting issuer only, its shares do not trade on any stock exchange.

The company targets properties that have the potential to host economically significant quantities and concentrations of one or more mineral resource commodities, principally uranium. Financial success is dependent upon the discovery of a mineral deposit that can be developed and mined at a profit. The probability of such success is difficult to quantify and the amount of resulting income, if any, cannot be determined with any certainty. None of the mineral properties held by the company are in production and, as such, the company does not currently have operating income or positive cash flow from operations.

As the company is a development stage enterprise, it has not yet determined whether its properties contain reserves that are economically recoverable and the ability to recover amounts from these properties is dependent upon a number of factors including environmental risks, legal and political risks, the discovery of economically recoverable reserves, confirmation of the company's interest in the underlying properties, the ability of the company to obtain necessary financing to complete the development and future profitable production or proceeds from the disposition of the properties.

Although the company has taken steps to verify title to the mineral properties on which it is conducting exploration and in which it has an interest, these procedures do not guarantee the company's title. Although management is not aware of any such agreements, transfers or defects, property title may be subject to unregistered prior agreements, claims or transfers and title may be affected by undetected defects. Assets

located outside of North America are subject to the risk of foreign investment, including currency exchange fluctuations and restrictions and local political instability and uncertainty.

The company faces risks and uncertainties including: (i) the inability to obtain the financing necessary to complete the development of its properties, (ii) realization of proceeds from the sale of its properties, or (iii) the company's licenses, permits or concessions being revoked as a result of title disputes, a failure to comply with agreements or security issues preventing the safe exploration and development of any properties under license. Specifically, the company has encountered many delays during the execution of its Niger project due to events and circumstances beyond its control. The government of Niger has acknowledged these delays as "force majeure" and has granted the company an extension to its current concessions until August 31, 2012 to compensate for the lost time, essentially giving it a further two years to comply with its original spending requirements. Such risks and uncertainties discussed above could result in a material write down of the mineral properties

The company is exploring its mineral properties and will continue to assess future opportunities in order to determine whether or not these properties have the potential to host economically significant quantities and concentration of uranium and in some cases vanadium, as well.

## Capitalization

The following sets the capitalization of the company as at December 31, 2010:

Description	Number of securities outstanding
Issued and outstanding	62,472,448(1)
Stock options	3,940,000(2)
Total number of securities outstanding	66,412,448

- <sup>(1)</sup> On June 26, 2010, the company cancelled 3,600,000 common shares, which were held in escrow under certain release conditions that did not materialize. See also note 9 of consolidated financial statements for further information on share capital.
- <sup>(2)</sup> See note 12 of consolidated financial statements for further information on stock options.

# Summary of Quarterly Results

Description	December 2010	September 2010	June 2010	March 2010	December 2009	September 2009	June 2009	March 2009
Current assets	\$1,393,491	\$320,692	\$410,180	\$3,930,441	\$4,407,748	\$5,472,035	\$6,174,961	\$9,814,283
Mineral properties	11,614,986	11,509,339	12,437,842	12,161,336	11,886,821	13,567,231	14,689,239	13,747,918
Current liabilities	264,025	167,518	191,177	287,713	232,037	861,984	1,209,017	1,058,400
Working capital	1,129,466	153,174	219,003	3,642,728	4,175,711	4,610,051	4,965,944	8,755,883
Loss (earnings) for the period (total)	(1,045,343)	1,545,993	662,011	(66,417)	1,946,634	2,172,809	342,261	242,408

The table below reflects a summary of certain key financial results for each of the eight previous quarters:

# Results of operations for year ended December 31, 2010 compared to year ended December 31, 2009

The table below reflects a summary of the key financial results for the year ended December 31, 2010:

Description	As at December 31, 2010	As at December 31, 2009
Working capital	\$1,129,466	\$4,175,709
Mineral properties	11,614,986	11,886,823
Capital assets	116,560	258,320
Shareholders' equity	10,961,012	16,555,926
	Year ended December 31, 2010	Year ended December 31, 2009
Project development expenses	\$114,075	\$105,331
Impairment loss (on US mineral properties)	1,087,311	3,310,114
General and administrative expenses	572,314	1,054,411

# Mineral properties

# (1) USA

The slump in uranium prices through 2008, 2009 and early 2010 led management to decide to relinquish its uranium holdings in the USA over that period. Consequently, during the year ended December 31, 2010, the company wrote off the remainder of its mining property expenditures in Utah and Colorado, USA in the amount of \$1,087,311. As at December 31, 2010, the cumulative net expenditures on these properties of \$8,406,860 have all been written off. In 2009, the Company wrote down \$3,310,114 of mineral properties belonging to the US subsidiary.

# (2) Niger

Following the acquisition of the Niger assets from Homeland Energy in February, 2007, the company set up an administrative office was set up in Niamey, Niger, an exploration warehouse facility in Agadez and an exploration field compound in Arlit. Several experienced Niger geologists and field technicians were hired during the second quarter of 2007 and by the third quarter of 2007, an exploration program had been finalized and field work subsequently commenced. A considerable amount of field equipment, including all-terrain vehicles, computers, tents and related equipment, was purchased and shipped to Niger.

During 2010, the company expended a total of \$455,450 (2009 - \$1,874,846) on the acquisition, exploration and development of its mineral properties in Niger. As at December 31, 2010, the cumulative net expenditures on these properties were \$11,614,986 (2009 - \$11,159,536).

During the year ended December 31, 2010, the company completed a follow up field program over the Asekra block of four licenses in order to obtain more data and related detailed information about the three large anomalous areas it identified during 2009. This field program comprised hand held scintillometer readings and geochemical sampling along a series of profile lines over Asekra targets 1, 2 and 3, along with first phase geological mapping and sampling. All data generated will be incorporated into the company's digital data base, processed and interpreted. Based upon the results thus obtained, discrete drill targets will be delineated, which along with those already delineated in the Agelal block will comprise the focus of a drill program scheduled for the year 2011.

The company hopes to raise additional cash in 2011 to complete a small drill program based on the additional work completed in 2010. This will be dependent on interest displayed by the public markets and on a continued improvement in security concerns in Niger.

# (3) Peru

On March 2, 2010, the company announced the signing of a letter of intent with Solex Resources Corp. ("Solex") to complete a business combination that has been unanimously approved by the Boards of Directors of both companies. Under the agreement, the company would acquire from Solex approximately 81.65 million common shares of Solex for consideration of \$4 million in cash and approximately 7.619 million common shares of Macusani Yellowcake Inc. ("Macusani") as well as a right to purchase the shares issuable if the company exercises up to approximately 4.57 million Macusani warrants (the "Homeland Assets"). The parties commenced due diligence procedures and negotiated a definitive agreement.

On April 5, 2010, the definitive agreement was executed. Insiders and senior officers and members of the Board of Directors of Solex agreed to support the transaction and entered into lockup agreements comprising approximately 10% and 3% of Homeland and Solex' issued and outstanding shares, respectively. Details of the offer were included in a formal definitive agreement and described in a Management Information Circular which was filed with the regulatory authorities and mailed to Solex shareholders in accordance with applicable

securities laws. Under certain circumstances if the transaction was not to be completed, a break fee of \$250,000 could have been payable by Solex or a reverse break fee of \$250,000 could have been payable by Homeland Uranium.

On May 14, 2010, pursuant to the signing of a letter of intent in March 2010 with Solex, the company acquired from Solex approximately 81.7 million common shares of Solex for consideration of \$4 million in cash and approximately 7.6 million common shares of Macusani Yellowcake Inc. ("Macusani") representing a 12.7% interest as well as a right to purchase the shares issuable if the company exercises up to approximately 4.57 million Macusani warrants.

The transaction was conditional on obtaining an agreement with Eldorado Gold Company on certain aspects of this transaction as well as the approval by not less than a majority of the votes cast by Solex shareholders. These conditions were later met and on May 14, 2010, the company announced the closing of the transaction whereupon it gained control of Solex. The company received 81.7 million (pre-consolidation) common shares of Solex, giving it a majority ownership stake, and received the right to nominate four directors to the Solex board, with former Solex shareholders having the right to nominate two directors to the board and the right to name the Solex CEO. The shareholders of Solex also proposed a name change of the company to Southern Andes Energy Inc. ("Southern Andes") and a proposed 3:1 share consolidation plan effective May 17, 2010. The issued and outstanding shares of Southern Andes were consolidated to 53,659,709 with the company owning 27,218,147 shares (a 50.7% ownership interest).

Following a review of various alternative manners in which the company could have distributed the Southern Andes shares to its shareholders, management recommended to the Board that distributing the Southern Andes shares to shareholders as part of a reduction of stated capital (the "Reduction in Capital") would be the most efficient and advantageous of such alternatives, including from a tax perspective.

Consequently, on October 27, 2010, the Board of Directors approved, among other matters, the convening of a special meeting of shareholders to be held on December 15, 2010 for the purpose of submitting to shareholders for their approval a special resolution authorizing the distribution of a majority of the Southern Andes shares as part of reduction of the stated capital of the company's common shares. The Reduction in Capital Resolution was approved by the company's shareholders at that special meeting.

Following shareholder and regulatory approval, the company distributed 24,720,328 shares of Southern Andes to its shareholders. Following the return of capital, the company retained 2,497,819 shares of Southern Andes (a 4.65% ownership interest). Further details on the Southern Andes transaction(s) can be found in note 5(a) of the consolidated financial statements. Subsequent to the company's distribution Southern Andes completed a financing through the issuance of 19.68-million units consisting of one common share and <sup>1</sup>/<sub>2</sub> common share purchase warrant. This issuance further reduced the company's interest in Southern Andes to 3.41%.

# Liquidity and Capital Resources

As at December 31, 2010, the company had working capital of \$1,129,466 (2009 - \$4,175,709). The major components of remaining working capital are (i) the company's share position in Solex, consisting of 2,497,819 common shares with a fair market value of \$1,161,486 and (ii) restricted cash of \$127,340 relating to reclamation deposits in the US that are expected to be released over the course of 2011.

Cash as at December 31, 2010 was \$24,413 (2009 - \$4,337,215). During 2010, the company invested \$4,000,000 in cash, along with other assets, to acquire the 50.7% stake in Southern Andes Energy Inc. During 2009, the company bought back 10,361,652 of its common shares at a cash cost of \$2,590,413 through a debt cancellation agreement with Homeland Energy.

Accounts receivable and prepaid expenses at December 31, 2010 totalled \$62,752, consistent with the December 31, 2009 balance of \$70,532. The company has no indebtedness other than ordinary trade payables and accruals totalling \$264,025 (2009 - \$232,038).

On June 3, 2010, the company closed a non-brokered private placement financing of 20 million common shares at \$0.05 per common share for gross proceeds of \$1 million. The common shares were subject to a four month hold period in accordance with requisite securities laws. A finder's fee of 5% payable in cash was paid on a portion of the private placement to qualified finders. The net proceeds of the financing amounted to \$985,500.

## Significant Recent Events Affecting the Nuclear Industry

The long-term implications of the recent nuclear plant problems in Japan remain uncertain. The company has limited visibility into the effects that these events could have on its business. For the purposes of risk assessment, it is prudent to assume that the net effect on the potential to raise additional funds and further the company's plans is potentially very negative.

## 2011 Budgeted Cash Requirements

The company has budgeted cash needs of approximately \$500,000 through to December 31, 2011, consisting of the administrative, regulatory and operating expenditures of the Canadian company, administrative and property commitments in Niger. This does not include any further investment commitments, merger or acquisition plans that the company may undertake during the coming year. The company is considering options to raise extra funds in this coming period to satisfy its long term cash needs. It may finance such requirements through equity financing, debt financing, and joint venture arrangements with other mining companies or the sale of interests in certain mining properties. There can be no assurances that such capital will be available to the company. The company requires additional capital is not an active seller of Southern Andes shares. It is therefore likely that the company will turn to current and/or new shareholders for additional investment to carry out the company's plans through 2011.

The company has limited resources of funds to engage in additional exploration and development, which may be necessary to exploit its properties and make additional acquisition payments in order to maintain its property interests. The company may not be able to obtain, on satisfactory terms, the financing necessary to finance its substantial obligations in respect of the company's mineral property interests. As such, the Company is actively investigating all options available to it to increase shareholder value and to most effectively fund future operations.

#### **General Expenses**

During 2010, general expenses, comprised of corporate and investor relations, professional fees and office and administration, were \$572,314 (2009 - \$1,054,411). The decrease was representative of the company's scaling back of its exploration and development activities in Niger and cessation of active operations in the US (as a result of the decision to let the US licenses expire in September, 2010).

A net foreign exchange gain of \$222,533 was recognized in 2010 (2009 - \$183,323). The net gain was comprised of: (i) a foreign exchange gain on the future income tax liability (denominated in Niger CFA's) of \$250,000 (2009 - \$300,000) and (ii) a foreign exchange loss on operations of \$27,467 (2009 - \$116,667). The foreign exchange gains reflect the fluctuation of the Canadian dollar compared to that of the US dollar and the local currency in Niger, the West African CFA.

#### Commitments

In Niger, the company is committed to spend a minimum of US\$300,000 per concession in the first year (US\$2,400,000 for the eight concessions). In the second and third years the expenditures are increased to US\$500,000 and US\$1,325,000 respectively per concession (US\$4,000,000 and US\$10,600,000 for the eight concessions). In addition, the company is obliged to pay land royalty fees to the government of Niger equivalent to CFA 1,000 (\$2.61) per square kilometre in the first three year term of the agreement (\$9,460 in total). In the first, second and later terms of renewals, the land royalties are increased to CFA 2000, CFA 3,000 and CFA 5,000 respectively per square kilometre. The company has also agreed to make cash payments to the government for the purpose of training Niger nationals equivalent to US\$10,000 per concession per year for three years or US\$ 80,000 for its eight concessions.

The company was granted the uranium exploration concessions relating to the Niger Properties in January 2007 and received Niger governmental approval on November 30, 2007. These concessions were granted for a three year period plus a nine month preparation period. In June 2010, the company was granted an extension to its licences until September, 2012.

# Transactions with Related Parties

During 2010, the company paid \$822 to Grove Communications for corporate and investor relation services (2009 - \$9,173). The owner of Grove Communications is a director and officer of the company.

During 2010, the company paid \$2,000 to Laurence Curtis as consulting fees (2009 - \$14,250). Mr. Curtis became a director of the company in June 2009, and later resigned in June, 2010.

The company paid consulting fees of \$Nil (2009 -\$3,500) to Tormin Resources Limited, the owner of which is a director of the company. Additionally, the company has made an agreement to rent out one of its offices to Tormin Resources on a part-time basis for \$750 per month starting May 1, 2008 for which it has received \$4,995 (2009 - \$9,000).

Starting in June, 2010, the company has paid a monthly fee of \$4,000 per month (\$28,000 for the year) to Southern Andes Energy Inc. for management and administrative costs shared by both companies.

The above transactions, occurring in the normal course of operations, are conducted on terms that approximate market value and are measured at the exchange amounts.

#### Future Accounting Changes

#### Transition to International Financial Reporting Standards

Canadian public companies will be required to prepare their financial statements in accordance with International Financial Reporting Standards ("IFRS"), as issued by the International Accounting Standards Board, for fiscal years beginning on or after January 1, 2011. The company is working to implement the IFRS changes to its consolidated financial statements. Effective January 1, 2011, the company will adopt IFRS as the basis for preparing consolidated financial statements and will report the financial results for the quarter ended March 31, 2011 prepared on an IFRS basis. The company will also provide comparative data on an IFRS basis, including an opening balance sheet as at January 1, 2010.

#### **Risk Factors**

An investment in the company's securities is considered extremely speculative. Prospective investors should consider the specific risks that are associated with the business of the company. None of the company's mineral properties in the Republic of Niger are in production and none of its mineral properties contain a known body of commercial ore. In order to develop its properties, the company may require additional

financing which may not be possible to obtain.

The business of mining is generally subject to a number of risks and hazards, insurance for which is generally not available. The company has or is seeking to acquire interests in some volatile regions of the world which have experienced or continue to experience periods of political and/or economic instability including war, terrorism and public disorder. The company's activities may be subject to extensive foreign laws and regulations and the company may become subject to significant liabilities for environmental damage resulting from its exploration activities or for any subsequent development. In addition, changes in mining or investment policies and regulations which cannot be accurately predicted may adversely affect the company's business. There is no guarantee that the company will obtain all required permits to develop its property interests.

The company encounters competition from other companies, some of which have greater financial resources and technical facilities than the company. This applies to Niger and any other countries where the company is pursuing to acquire properties. Market fluctuations in the price of uranium and other energy related minerals is also another major risk factor as it may render ore reserves to be uneconomic.

The company has certain spending commitments on its properties and it is possible that these commitments may not be met in a timely manner for operational, security or other reasons. In normal circumstances, the company could negotiate an extension for its contract obligations but there is no guarantee that it will succeed in obtaining such an extension or relief. In such cases, the company would risk losing its contractual rights on these properties. The company can manage these risks to some degree through the relinquishment of exploration rights over portions of the lands in question.

The company is a relatively young organization. Its success will largely depend on the efforts and abilities of certain senior officers and key employees. Certain of the directors and officers of the company also serve as directors and/or officers of other companies involved in natural resource exploration and development and consequently there exists a possibility for such directors and officers to be in a position of conflict. See "Conflicts of Interests" below.

# Lack of Operational Liquidity

The expenses of the company will be funded from cash on hand from the remaining proceeds of the previous offerings, now effectively represented by the investment position in Southern Andes. Once such cash has been expended, Homeland Uranium will be required to seek additional financing. There is no guarantee that any debt or additional equity or equity related offering of securities will be available on terms acceptable to the company or that it will be able to locate or sell  $U_3O_8$  in a timely or profitable manner.

# Exploration, Development and Operating Risks

Mining and exploration operations generally involve a high degree of risk. The operations of Homeland Uranium are subject to all the hazards and risks normally encountered in the exploration, development and production of precious and base metals and other minerals, including but not limited to, unusual and unexpected geologic formations, seismic activity, rock bursts, cave-ins, flooding and other conditions involved in the drilling and removal of material, any of which could result in damage to, or destruction of, mines and other producing facilities, damage to life or property, environmental damage and possible legal liability. Although adequate precautions to minimize risk will be taken, milling operations are subject to hazards such as equipment failure or failure of retaining dams around tailings disposal areas, which may result in environmental pollution and consequent liability. The exploration for and development of mineral deposits involves significant risks which may not be eliminated even with a combination of careful evaluation, experience and knowledge. While the discovery of uranium and other minerals may result in substantial rewards, few properties which are explored are ultimately developed into producing mines. Major expenses

may be required to locate and establish mineral reserves, to develop metallurgical processes, and to construct mining and processing facilities at a particular site. It is impossible to ensure that the exploration or development programs planned by the company will result in a profitable commercial mining operation. Whether a mineral deposit will be commercially viable depends on a number of factors, some of which are: the particular attributes of the deposit, such as quantity and quality of the minerals and proximity to infrastructure; mineral prices which are highly cyclical; and government regulations, including regulations relating to prices, taxes, royalties, land tenure, land use, importing and exporting of minerals, and environmental protection. The exact effect of these factors cannot be accurately predicted but the combination of these factors may result in the company not receiving an adequate return on invested capital. There is no certainty that the expenditures made by the company towards the search and evaluation of uranium and other minerals will result in discoveries of commercial quantities of ore or other minerals.

## Nuclear Accident

An accident at a nuclear reactor anywhere in the world, as recently occurred in Japan, , could impact on the continued acceptance by the public and regulatory authorities of nuclear energy and the future prospects for nuclear generators, which could have a material adverse effect on the Company.

## Uranium Price Volatility

The company's activities will be almost exclusively exploration and possibly the development of uranium mining properties in Niger and the U.S. Therefore, the principal factors affecting the price of the common shares are factors which affect the price of  $U_3O_8$ , and are thus beyond the company's control. Such factors include, among others, (1) the demand for nuclear power, (2) natural catastrophes such as recently occurred in Japan, (3) political and economic conditions in uranium producing and consuming countries such as Canada, the United States and former Soviet Republics, (3) reprocessing of used reactor fuel and the re-enrichment of depleted uranium tails, (4) sales of excess civilian and military inventory (including from dismantling of nuclear weapons), and (5) industry participants' production levels and costs of production in countries like Russia, Canada, United States and Africa.

The market prices of  $U_3O_8$  are affected by rates of reclaiming and recycling of uranium and rates of production of uranium from mining, and may be affected by a variety of unpredictable international economic, monetary and political considerations, including increased efficiency of nuclear power plants and increased availability of alternative nuclear fuel, such as mixed oxide fuel generated in part from weapons grade plutonium.

Macroeconomic considerations include: expectations of future rates of inflation, the strength of, and confidence in, the U.S. dollar, the currency in which the price of  $U_3O_8$  is generally quoted, and other currencies, interest rates and global or regional economic events.

In addition to changes in production costs, shifts in political and economic conditions affecting uraniumproducing countries may have a direct impact on their sales of uranium.

The price of uranium is also tied directly to the worldwide electrical utility industry. Deregulation of the utility industry, particularly in the U.S. and Europe, is expected to impact the market for nuclear and other fuels for years to come, and may result in the premature shutdown of nuclear reactors. Experience to date with deregulation indicates that utilities are improving the performance of their reactors, achieving record capacity factors. There can be no assurance that this trend will continue.

# Foreign Exchange Rates

With the cessation of exploration activities in the US, the company is now only exploring uranium properties

in Niger. However, the company maintains its accounting records, reports its financial position and results, pays certain operating expenses and the common shares trade, in Canadian currency. Therefore, because exchange rate fluctuations are beyond the company's control, there can be no assurance that such fluctuations will not have an adverse effect on the company's operations or on the trading value of the common shares.

## Security Threats Due to Armed Conflict

The security situation in the Arlit-Agadez region of northeastern Niger may worsen due to increased rebel activity by a Tuareg movement called the Mouvement des Nigeriens pour la Justice ("MNJ"). The MNJ have staged several attacks against government military installations in the region. If this conflict escalates and poses a risk to the health and safety of the company's personnel operating in the area, then the company may be forced to curtail or cease field exploration operations in the area, which may result in a material adverse effect on the company's business plan and operations. Recognition of this risk has led the Niger government to extend the original license terms for a further 27 months until August 31, 2012.

## Competition

The mining and mineral exploration industry and in particular, the international uranium industry, is competitive in all of its phases. Homeland Uranium faces strong competition from other mining and exploration companies in connection with the acquisition of properties producing, or capable of producing, uranium and uranium oxide. Many of these companies have greater financial resources, operational experience and technical capabilities than the company. Because of this competition, the company may be unable to maintain or acquire attractive mining or exploration properties on terms it considers acceptable or at all. Consequently, the revenues, operations and financial condition of the company could be adversely affected.

Nuclear energy competes with other sources of energy, including oil, natural gas, coal and hydroelectricity. These other energy sources are to some extent interchangeable with nuclear energy, particularly over the longer term. Sustained lower prices of oil, natural gas, coal and hydro-electricity, as well as the possibility of developing other low cost sources for energy, may result in lower demand for uranium. Furthermore, growth of the uranium and nuclear power industry will depend upon continued and increased acceptance of nuclear technology as a means of generating electricity. Because of unique political, technological and environmental factors that affect the nuclear industry, the industry is subject to public opinion risks, which could have an adverse impact on the demand for nuclear power and increase the regulation of the nuclear power industry.

#### Insurance and Uninsured Risks

The business of the company is subject to a number of risks and hazards generally, including adverse environmental conditions, industrial accidents, labor disputes, unusual or unexpected geological conditions, ground or slope failures, cave-ins, changes in the regulatory environment and natural phenomena such as inclement weather conditions, floods and earthquakes. Such occurrences could result in damage to mineral properties or production facilities, personal injury or death, environmental damage to the properties of the company or the properties of others, delays in mining, monetary losses and possible legal liability.

Homeland Uranium currently maintains no insurance other than director and officer liability insurance, kidnap insurance risk and vehicle insurance in Niger and the United States. The company may, however, acquire insurance in the future to protect against certain risks in such amounts as it considers being reasonable. While we may obtain insurance against certain risks, the nature of these risks is such that liability could exceed policy limits or could be excluded from coverage. Even after acquiring insurance, such insurance will not cover all the potential risks associated with a mining and/or exploration company's operations. The company may also be unable to maintain insurance to cover these risks at economically feasible premiums. Insurance coverage may not continue to be available or may not be adequate to cover any

resulting liability. Moreover, insurance against risks such as environmental pollution or other hazards as a result of exploration and production is not generally available to the company or to other companies in the mining and exploration industry on acceptable terms. The company might also become subject to liability for pollution or other hazards which it may not be insured against or which the company may elect not to insure against because of premium costs or other reasons. Losses from these events may cause the company to incur significant costs that could have a material adverse effect upon its financial performance and results of operations.

## **Resignation by Key Personnel**

The success of the company is highly dependent on the services of certain management personnel. The loss of the services of such personnel if not replaced, could have a material adverse effect on the business operations. The company does not currently have key-person insurance on these individuals.

## **Conflicts of Interest**

Directors and officers of the company may provide investment, administrative and other services to other entities and parties. The directors and officers of the company have undertaken to devote such reasonable time as is required to properly fulfill their responsibilities in respect to the business and affairs of the company, as they arise from time to time.

## Lack of Infrastructure

Mining, processing, development and exploration activities depend, to one degree or another, on adequate infrastructure. Reliable roads, bridges, power sources and water supply are important determinants, which affect capital and operating costs. Unusual or infrequent weather phenomena, sabotage, government or other interference in the maintenance or provision of such infrastructure could adversely affect the operations, financial condition and results of operations of the company.

# **Regulatory Change**

Homeland Uranium may be affected by changes in regulatory requirements, customs, duties or other taxes. Such changes could, depending on their nature, benefit or adversely affect the company.

# **Risks Related to Title to Properties**

The acquisition of title to mineral properties is a very detailed and time-consuming process. Title to, and the area of, mineral concessions may be disputed. Although the company believes that it has taken reasonable measures to ensure proper title to its properties, there is no guarantee that title to any of the properties will not be challenged or impaired. Third parties may have known or unknown valid claims underlying portions of the company's interests, including prior unregistered liens, agreements, transfers or claims, including native land claims, and title may be affected by, among other things, undetected defects. In addition, the company may be unable to operate its properties as permitted or may be unable to enforce its rights with respect to its properties. Homeland Uranium may seek to increase the concentration of its mining activities in areas where it already operates mines, or has exploration licenses which it expects will result in operating mines. If the company seeks to amend its current licenses to include additional resources in the area, there can be no assurance that it will be able to obtain the necessary authorizations and regulatory approvals.

#### No Mineral Resources or Mineral Reserves

No mineral resources or mineral reserves have been attributed to the Niger and US properties and the company holds no other property interests as of the date of this MD&A.

The exploration of the area encompassed within the company's properties must be considered to be in an early stage. There is no assurance that any mineralization will be discovered in economic quantities, if at all. The long-term viability of the company depends upon its ability to find or acquire, develop and commercially produce base metals and other minerals.

## **Environmental Risks**

All of Homeland Uranium's planned operations are subject to environmental regulations, some of which are also subject to environmental licensing. This can make the company's business expensive to operate or prevent certain operations altogether. The company is subject to potential risks and liabilities associated with pollution of the environment and the disposal of waste products that could occur as a result of its mineral exploration, development and production. Such liabilities include not only the obligation to remediate environmental damages and indemnify affected third parties, but also the imposition of administrative and criminal sanctions against the company and its employees and executive officers.

To the extent the company is subject to environmental liabilities, the payment of such liabilities or the costs that may be incurred to remedy environmental pollution would reduce funds otherwise available to the company and could have a material adverse effect on Homeland Uranium. If the company is unable to fully remedy an environmental problem, it might be required to suspend operations or enter into interim compliance measures pending completion of the required remedy. The potential exposure may be significant and could have a material adverse effect on the company. Homeland Uranium has not purchased (and does not intend to purchase) insurance for environmental risks (including potential liability for pollution or other hazards as a result of the disposal of waste products occurring from exploration and production) because it is not generally available at a reasonable price.

All of the company's planned exploration and possible development and production activities are, or will be, subject to regulation under one or more of the various local, state and federal environmental laws and regulations. Many of the regulations require the company to obtain authorizations for its activities. The company must update and review its authorizations from time to time and are subject to environmental impact analyses and public review processes prior to approval of new activities. It is possible that future changes in applicable laws, regulations and authorizations or changes in their enforcement or regulatory interpretation could have a significant impact on some portion of the company's business, causing those activities to be economically re-evaluated at that time. Those risks include, but are not limited to, the risk that regulatory authorities may increase bonding requirements beyond the company's financial capability or that of its subsidiaries. Where posting of a bond in accordance with regulatory determinations is a condition to the right to operate under any material operating authorizations, increases in bonding requirements could prevent the company from operating even if it and its subsidiaries were otherwise in full compliance with all substantive environmental laws.

# Need For and Availability of Future Additional Equity Capital

Homeland Uranium's business strategy may require additional substantial capital investment. To the extent that cash generated internally and cash available under any credit facility that may be entered into are not sufficient to fund capital requirements, the company will require additional debt and/or equity financing. However, this type of financing may not be available or, if available, may not be available on satisfactory terms. If the company fails to generate or obtain sufficient additional capital in the future, it could be forced to reduce or delay capital expenditures, sell assets or restructure or refinance indebtedness, if any.

The company may need to obtain additional resources in the future in order to execute the company's growth strategy, including the possible acquisition of new businesses and assets. The company may not be able to obtain debt financing on terms attractive to it, or at all. If the company cannot obtain adequate funds to

satisfy its capital requirements internally or through other methods of financing, the company may need to increase its capital through an additional equity offering. Sales by the company of a substantial number of common shares after the completion of the offering could negatively affect the market price of the common shares and dilute existing shareholdings.

# **Foreign Operations**

The majority of the operations of Homeland Uranium are currently conducted outside of Canada in Niger and as such, the operations of the company are exposed to various levels of political, economic and other risks and uncertainties. These risks and uncertainties vary from country to country and include, but are not limited to, currency exchange rates, high rates of inflation; labor unrest; renegotiation or nullification of existing concessions, licenses, permits and contracts; changes in taxation policies, restrictions on foreign exchange, and changing political conditions, currency controls and governmental regulations that favor or require the awarding of contracts to local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction.

Changes, if any, in mining, exploration or investment policies or shifts in political attitude in Niger may adversely affect the operations or profitability of the company. Operations may be affected in varying degrees by government regulations with respect to, but not limited to, restrictions on production, price controls, export controls, currency remittance, income taxes, foreign investment, maintenance of claims, environmental legislation, land use, land claims of local people, water use and mine safety.

Failure to comply strictly with applicable laws, regulations and local practices relating to mineral right applications and tenure, could result in loss, reduction or expropriation of entitlements.

The occurrence of these various factors and uncertainties cannot be accurately predicted and could have an adverse effect on the operations or profitability of the company.

# Government Regulation

The mining, processing, development and mineral exploration activities of the company are subject to various laws governing prospecting, development, production, taxes, labor standards and occupational health, mine safety, toxic substances, land use, water use, land claims of local people, and other matters. Although the mining and processing operations and exploration and development activities of the company are currently carried out in accordance with all applicable rules and regulations, no assurance can be given that new rules and regulations will not be enacted or that existing rules and regulations will not be applied in a manner which could limit or curtail production or development.

Amendments to current laws and regulations governing operations and activities of mining and milling or more stringent implementation thereof could have a substantial adverse impact on the company.

#### Market Price of Common Shares

The common shares do not currently trade on any exchange or market. Securities of micro-cap and small-cap companies have experienced substantial volatility in the past, often based on factors unrelated to the financial performance or prospects of the companies involved. These factors include macroeconomic developments in North America and globally, and market perceptions of the attractiveness of particular industries. The price of the common shares is also likely to be significantly affected by short-term changes in precious metals and uranium oxide or other mineral prices, or in its financial condition or results of operations as reflected in its quarterly earnings reports. Other factors unrelated to the company's performance that may have an effect on the price of its common shares include the following: (1) the extent of analytical coverage available to investors concerning the company's business may be limited if investment banks with research capabilities do

not follow the company's securities, (2) lessening in trading volume and general market interest in the company's securities may affect an investor's ability to trade significant numbers of common shares, (3) the size of the company's public float may limit the ability of some institutions to invest in the company's securities, and (4) a substantial decline in the price of the common shares that persists for a significant period of time could cause the company's securities, if listed on an exchange, to be delisted from such exchange, further reducing market liquidity.

As a result of any of these factors, the market price of the common shares at any given point in time may not accurately reflect the company's long-term value. Securities class-action litigation often has been brought against companies following periods of volatility in the market price of their securities. The company may in the future be the target of similar litigation. Securities litigation could result in substantial costs and damages and divert management's attention and resources.

## No Dividends

No dividends on the common shares have been paid by the company to date. The company currently plans to retain all future earnings and other cash resources, if any, for the future operation and development of its business. Payment of any future dividends, if any, will be at the discretion of the company's board of directors after taking into account many factors, including the company's operating results, financial condition, and current and anticipated cash needs.

# Control of the Company

The company currently has two significant shareholders holding an aggregate of close to 40% of the outstanding securities of the company. As a result, the ability to impact on the election of directors and other corporate actions is concentrated with these shareholders, possibly to the detriment of other shareholders.

#### Forward Looking Statements

This discussion contains "forward looking information" which may include, but is not limited to, statements with respect to the future financial or operating performance of the company, its subsidiaries and its projects, timing and likelihood of obtaining government approval for exploration and other operations, the future price of uranium, exploration expenditures, costs and timing of the development of new deposits, costs and timing of future exploration, requirements for additional capital and availability of future financing, environmental risks, reclamation expenses, title disputes or claims, limitations of insurance coverage and the timing and possible outcome of legislative and regulatory matters. Often, but not always, forward looking statements can be identified by the use of words such as "plans", "expects", "is expected", "budget", "scheduled", "estimates", "forecasts", "intends", "anticipates", or "believes" or variations (including negative variations) of such words and phrases, or state that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved. Accordingly, readers should not place undue reliance on forward looking statements. Forward looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the Company and/or its subsidiaries to be materially different from any future results, performance or achievements expressed or implied by the forward looking statements. Such factors include, among others, lack of a statutory framework for uranium mining in the country of Niger, lack of access to historic drill core, delays in obtaining governmental and regulatory approvals, uncertainty of acquiring necessary drilling permits, general business, economic, competitive, political, social and security uncertainties; the actual results of current exploration activities; actual results of reclamation activities; conclusions of economic evaluations; changes in project parameters as plans continue to be refined; future prices of uranium; possible variations of geological parameters; failure of equipment to operate as anticipated; accidents, labour disputes and other risks of the mining industry; political instability, insurrection, terrorism or war; delays in obtaining financing or in the completion of exploration, development or construction activities, as well as those factors discussed in the

section entitled "Risk Factors" in this prospectus. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward looking statements, there may be other factors that cause actions, events or results to differ from those anticipated, estimated or intended.
