e. Liquidity risk

Liquidity risk is the risk that the Company will not be able to meet its financial obligations as they fall due. The Company currently settles its financial obligations out of cash. The ability to do this relies on the Company raising equity financing in a timely manner and by maintaining sufficient cash in excess of anticipated needs.

The Company's activities have been funded through equity financing, and the Company expects that it will continue to be able to utilize this source of financing until it develops cash flows from operations, although current stock market and general economic conditions have made this more difficult. There can be no assurance, however, that the Company will be successful in its efforts. If such funds are not available or other sources of financing cannot be obtained, then the Company will be forced to curtail its activities to a level for which funding is available and can be obtained.

The Company's investment policy is to hold excess cash as cash or in highly liquid, short-term, interest-bearing instruments, such as Government of Canada Treasury bills or debt instruments issued by major Canadian chartered banks, with initial maturity terms of less than one year from the original date of acquisition, selected with regard to the Company's anticipated liquidity requirements.
