FOR IMMEDIATE RELEASE

**CADMAN SIGNS OPTION AGREEMENT FOR 100% INTEREST OF COPPER
PROPERTY LOCATED IN GASPE**

November 9, 2012 – Toronto, Ontario – Cadman Resources Inc. (CUZ) (the “**Company**”) Further to the Company’s news release of October 22, 2012 the Company is pleased to announce that it is proceeding with the Gaspé copper project. The Company has signed an option agreement with the property owner, Bertrand Brassard to acquire 100 per cent interest in the copper project located in the Gaspé Peninsula in the Province of Quebec. The Gaspé copper property (the “**Property**”) is comprised of 56 permits totaling 3,192 Ha. Historical results showed trench samples up to 5.1% copper. Conditions permitting, management intends to begin work on the Property immediately.

To exercise the option and earn 100 per cent interest in the Property the company is required to deliver 100,000 shares of Company common stock upon signing of the option agreement and to deliver a further 1,000,000 shares of Company common stock on or prior to December 31, 2013. The Company has made a cash payment of \$5,000 at the signing of the LOI and must make a further cash payment of \$25,000 on or prior to December 31, 2013. The Company also has a work commitment of \$300,000, \$100,000 of which must be incurred by June 1st, 2013 and the remaining \$200,000 must be incurred by December 31, 2013.

About the Gaspé Project

The Gaspé Property is located about 40 km WNW of Chandler on the Gaspé Peninsula, in Raudin Township. This land position occurs within the anticlinorium d’Aroostook-Perce and Baie des Chaleurs. The Property is also located on the Grand-Pabos fault, a major structural zone that hosts several type of mineralization.

In 1955 prospectors outlined outcrops containing low grade nickel, copper and chromite (MRNFQ assessment Report, GM 11559). In the following years several other showings were discovered. In the 80’s Soquem assayed new zones that graded up to 1,12% Lead, 1,32% Zinc and 12,14 g/t Silver within volcanic felsic units (GM

40502). In 1992 Exploration Raudin discovered a new polymetallic occurrence called Vallée Sèche showing. Assays in a trench graded 5.21 % copper and 1.9 g/t silver over 5m (GM 54229). Highly altered ultramafic rocks and Carlin type sediments are strong indicators for search potential.

Information on the Company and its officers is available on the Company's profile at www.sedar.com or on the CNSX website.
