DONNER #4 FLOWS GAS TO SURFACE

VANCOUVER, B.C. March 13, 2014 – Hillcrest Resources Ltd. (the “Company” or Hillcrest”) (TSX.V : HRH) is pleased to report that the recently drilled Donner #4 well, located in Newton County Texas, has been completed as a gas producer. The well was recently drilled to a total depth of 7510 feet at which time logs were run and interpreted. The well has been initially completed in the 7400 Struma sand, a known gas producer elsewhere in the Field. Following a short term gas to surface test, the well was shut in pending the installation of surface facilities necessary for gas sales. Equipment for production was ordered and is expected to arrive within the next week at which time the well will be opened for sales. Hillcrest has a 60% working interest in the Donner #4 well.

“Hillcrest is pleased with the recent developments on the Donner #4 well” states Don Currie, the Company’s CEO and Chairman. “Gas sales from this well will be the third revenue producer from the Company’s Newton County assets. We have been able to continue to try and exploit our acreage through non-dilutive financing and with the success of this latest well, should see an increase in cash flow and reserve value. We expect to have further news on this well in addition to news on the recently drilled Brown #1 well over the next 7-10 business days.”

The Company will advise of the flow rates once the equipment has arrived and the well is opened.
