

Li-Metal Announces First Shipment of Lithium Metal Anode Product

TORONTO, Canada - February 8, 2022 — Li-Metal Corp. (CSE: LIM) ("Li-Metal" or the "Company"), a leading developer of lithium metal anode and lithium metal technologies critical for next-generation batteries, announced today that it has shipped its first batch of lithium metal anode product to a battery developer customer. This batch of product was produced at the Company's newly commissioned roll-to-roll anode plant in Rochester, New York, which produces lithium anode materials for next-generation battery makers (see news release dated January 13, 2022). Li-Metal's ultra-thin metallic lithium anode aims to reduce the cost of next-generation batteries while improving their energy density.

"We are pleased to announce that lithium anode material from Li-Metal's newly commissioned anode production facility has been shipped," said Li-Metal co-founder and CEO, Maciej Jastrzebski. "We are continuing to ramp up production capacity to meet the supply needs of the many battery developers we are working with to establish ourselves as the preeminent mid-stream supplier in the next-generation battery supply chain."

The Company's anode production plant facility, which was commissioned in January 2022, has the ability to supply lithium anode product to next-generation battery makers and to produce lithium anode material in the quantities needed for product qualification. The facility establishes key infrastructure needed to support the next-generation battery ecosystem, which offers the capacity to produce thousands of large pouch cells per year.

About Li-Metal Corp.

Li-Metal is a Canadian-based company developing lithium metal anodes and lithium metal production technologies for use in next generation batteries. Our production methods are significantly more sustainable than existing products and offer lighter, more energy dense and safer batteries that are critical to tomorrow's electric vehicles.
