PRESS RELEASE

September 12, 2011

TSX-V: WST

**WESTRIDGE FILES 43-101 TECHNICAL REPORT
ON THE CHARAY PROJECT**

VANCOUVER, B.C. – Westridge Resources Inc. (the “**Company**”) is pleased to announce a National Instrument 43-101 technical report dated January 31, 2011, as amended July 24, 2011, has been filed by the Company and is available on SEDAR under the Company’s profile. The technical report, entitled “Geological Assessment and Exploration Proposal (2011) for the Charay Project (La Mina El Padre)”, was prepared by Phil Van Angeren, P.Geo.

As previously disclosed in the Company’s news release dated August 11, 2011, the Company’s wholly-owned subsidiary, Minera Westridge S.A. de C.V. (“**Minera**”), has entered into an option agreement (the “**Option Agreement**”) with Musgrove Minerals Corp. whereby Minera has been granted an option (the “**Option**”) to acquire up to a 100% interest in and to certain mineral concessions in the United Mexican States known as the Charay Project.

The Company is currently seeking TSX Venture Exchange approval of the Option Agreement. The completion of the Option is subject to the acceptance of the Option Agreement by the TSX Venture Exchange. There can be no assurance that the Option will be completed as proposed or at all.

Summary of the 43-101 Report on the Charay Project

The Charay property (pronounced “cha-rye”), also known as “La Mina El Padre”, is located at the north end of the State of Sinaloa, Mexico, approximately 36 km northeast of the city of Los Mochis. The property consists of three mining concessions totalling 380 hectares, which are held by a Mr Luis Palafox of Hermosillo, Mexico, and which are under option to Musgrove (originally Journey Resources Corp.) of Vancouver, B.C. The Palafox concession is surrounded by a 11,508 hectare concession 100%-controlled by Minerales Jazz S.A. de C.V. (Jazz), a subsidiary of Musgrove.

Geologically, the Charay property is classified as a low sulphidation, epithermal, gold-silver quartz vein with low base metal content. The pertinent points regarding this property are as follows:

- High-grade, near-vertical, epithermal gold/silver vein system within an andesitic volcanic complex (El Padre vein): oxidized, hematitic, low-sulphide, banded quartz-vein and silicified breccia with a prominent silica cap (typical low-sulphidation epithermal features),
- Vein width in the order of 1.0 to 2.0m; length in excess of 400m, extending to 50m depths, and open in all directions (indicated by drilling),

- Existence of several mineralized and/or silicified structures indicated by workings and geology,
- Potential for buried bonanza mineralization (indicated by drilling) as well as additional mineralization on strike,
- Little or no comprehensive historical exploration. Surprisingly under-explored given the high gold grades. No workings reach deeper than 35m, no drill intercepts below ~50m depths,
- A 27-hole drill program in 2005 intersected a 250 m long mineralized section within 50m of surface on the El Padre vein, at a weighted average of 18.75 gm/T Au and 120.2 gm/T Ag over a true width of 1.14m, recalculated in 2010 at 20.3 gm/T Au and 123.7 gm/T Ag across 1.29m, and
- Location in an area with established mining logistics (eg, access to local mills, mining expertise, railway, powerline, and tidewater port).

It has been recommended to continue with surface exploration and drilling on this property in 2011/12, with the goal of determining: i) the extent of the high-grade “El Padre” bonanza; ii) the presence of additional mineralized bodies elsewhere along the El Padre vein; and iii) the presence of other potentially mineralized structures throughout the property.

A three-phase exploration program is envisaged: i) surface exploration to better qualify and quantify the known mineralized body, with property-wide geological exploration to identify additional potentially mineralized structures (common in low-sulphidation epithermal camps); ii) close-spaced drilling of the currently-defined “bonanza” portion of the El Padre vein; followed by iii) step-out drilling along the extensions of the El Padre vein and/or any attendant sub-parallel vein structures. This three-phase proposal is projected to cost approximately CDN\$1,400,000.00.

Phase I exploration is broken into two tranches. The first tranche is recommended to consist of general geological work such as data compilation, interpretation, detailed mapping, core relogging, trenching/sampling along the length of the El Padre vein, and detailed modelling of the mineralization. The in-depth modelling would provide Westridge with better positional control for the detailed and step-out drilling proposed in Phase II of the program. Tranche 1 is envisaged to cost CDN\$200,000.00.

The second tranche of Phase I is projected to consist of property-wide prospecting, geological mapping, geochemical and geophysical surveying and possible trenching in order to identify other potentially mineralized vein systems adjacent the El Padre vein. Tranche 2 is expected to cost CDN\$200,000.00; with Phase I totalling CDN\$400,000.00.

In Phase II, to be held concurrently with tranche two of Phase 1, fourteen (14) core holes are expected to be drilled on a 50m by 50m grid, to a depth of 100m, in conjunction with preliminary bulk sampling (for metallurgy), at a projected cost of CDN\$456,000.00. Following this, a Phase III drilling campaign is proposed for the higher priority targets defined in Phases I and II. It is estimated this can be completed at a cost of CDN\$544,000.00.

This preliminary geological exploration and drilling program will initiate a longer-term exploration program directed at: i) detailed in-fill drilling of the El Padre vein system; ii) detailed

exploration of the extensions to the El Padre vein (if any) and of new mineralized vein systems (if any); and iii) initiation of feasibility studies (if warranted).

About Westridge Resources

Westridge Resources Inc. is a Canadian-based mineral exploration company focused on the acquisition, evaluation and exploration of mineral resource properties. As recently announced, Westridge has entered into an option agreement, the completion of which is subject to TSX Venture Exchange Approval, to acquire up to a 100% interest in the Charay Project, located in Sinaloa State, Mexico. Westridge expects to initiate an exploration and core drilling program on the Charay property before the end of 2011.

Phil Van Angeren, is an independent Qualified Person, as defined by National Instrument 43-101, and has reviewed the technical aspects of this news release.

Forward Looking Statements

Statements contained in this news release that are not historical facts constitute “forward-looking statements” or “forward-looking information” within the meaning of applicable securities laws and are based on expectations, estimates and projections as of the date of this release. Forward-looking statements include, without limitation, possible events, statements with respect to possible events, the future price of gold and other commodities, the realization of mineral resource estimates and success of exploration activities. The words “is expected” or “estimates” or variations of such words and phrases or statements that certain actions, events or results “may” or “could” occur and similar expressions identify forward-looking statements. Forward-looking statements are necessarily based upon a number of estimates and assumptions that, while considered reasonable by the Company as of the date of such statements, are inherently subject to significant business, economic and competitive uncertainties and contingencies. The estimates and assumptions of the Company contained in this release which may prove to be incorrect, include, but are not limited to, (1) the completion of Company’s acquisition of an interest in the Charay property; (2) the initiation of an exploration and core drilling program on the Charay property before the end of 2011. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements. Such factors include, but are not limited to: fluctuations in the spot and forward price of gold or certain other commodities; changes in national and local government legislation, taxation, controls, regulations and political or economic developments in Canada; business opportunities that may be presented to, or pursued by, the Company; operating or technical difficulties in connection with mining activities; the speculative nature of gold exploration and development, including the risks of obtaining necessary licenses and permits; diminishing quantities or grades of reserves; and contests over title to properties, particularly title to undeveloped properties. In addition, there are risks and hazards associated with the business of gold exploration, development and mining, including environmental hazards, industrial accidents, unusual or unexpected formations, pressures, cave-ins, flooding and gold bullion losses (and the risk of inadequate insurance, or the inability to obtain insurance, to cover these risks). Many of these uncertainties and contingencies can affect the Company’s actual results and could cause actual results to differ materially from those expressed or implied in any forward-looking statements made by, or on behalf of, the Company. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Forward-

looking statements are provided for the purpose of providing information about management's expectations and plans relating to the future. All of the forward-looking statements made in this release are qualified by these cautionary statements and those made in our other filings with the securities regulators in Canada. These factors are not intended to represent a complete list of the factors that could affect the Company. Although the Company believes that the expectations in the forward-looking statements are reasonable, actual results may vary, and future results, levels of activity, performance or achievements cannot be guaranteed.
