Spearmint to Commence Exploration on Whabouchi Lakes Lithium Prospect in Quebec

Spearmint Resources Inc. (“SRJ” or the “Company”) (SRJ—TSX.V) wishes to announce that the company is actively evaluating the recently acquired "Whabouchi Lakes Property" located in the James Bay area of the Province of Quebec. Management is formulating the first phase of exploration. This property is approximately 2.13 square kilometers that overlay the possible source of a lake sediment geochemical anomaly. The anomalous elements are bismuth, rare earth elements, lithium, niobium and tungsten, which represent good indicators of pegmatite-hosted type of mineralization also present at Nemaska Lithium Inc.’s (NMX.V) Whabouchi deposit.

James Nelson, Director of Spearmint states, "This new lithium district has certainly garnered significant market attention recently. Nemaska Lithium Inc (NMX.V) has recently seen a noteworthy increase in market capitalization as they have recently updated their feasibility study. We look forward to getting to work on our lithium property shortly."
