

# Spearmint Discovers Multiple Anomalies on its Perron-East Gold Project in Quebec

Vancouver, British Columbia--(Newsfile Corp. - April 12, 2021) - **Spearmint Resources Inc. (CSE: SPMT) (OTC Pink: SPMTF) (FSE: A2AHL5) (the "Company")** is pleased to announce that multiple soil anomalies have been discovered on the 100-percent owned Perron-East gold project in Quebec. Immediate plans are now being formulated for an Induced Polarization (IP) survey over these anomalies with the expectation for a summer drill program once the highest priority drill targets are defined.

The company also wishes to announce that the metallurgy from the Clayton Valley lithium clay project in Nevada, where Spearmint discovered lithium in 10 out of 10 drill holes, is now expected in 2-3 weeks from today, with the potential maiden resource calculation to follow that.

James Nelson, President of Spearmint Resources stated, "We are very pleased to have discovered multiple anomalies on the Perron-East gold project. This project is situated in the direct vicinity of Amex Exploration Inc. and Starr Peak Mining Ltd. who are both undertaking significant drill programs currently utilizing the same geological team as Spearmint (Laurentia Exploration). When you couple this exciting development on the Quebec gold project with the highly anticipated metallurgy data and resource calculation pending, it is clear this is one of the most transformational periods for Spearmint. Not only do we have multiple upcoming catalysts, but we are in the best financial shape in the company's history. We are very optimistic about the next few months in terms of corporate growth for Spearmint."

## Clayton Valley Ownership Map
