

Spearmint Acquires the George Lake South Antimony Project in New Brunswick, Canada

Vancouver, British Columbia--(Newsfile Corp. - November 27, 2024) - **Spearmint Resources Inc. (CSE: SPMT) (OTC Pink: SPMTF) (FSE: A2AHL5) (the "Company" or "Spearmint")** wishes to announce that it has acquired the George Lake South Antimony Project in New Brunswick, Canada. This project consists of 1,945 contiguous acres prospective for antimony.

James Nelson, President of Spearmint stated, "Year to date, antimony prices have more than doubled, making it one of the best performing commodities this year. This is a great addition to our stable of projects and being in Canada, it allows us to access flow through money if needed. Management is formulating a plan on this project and intends to update the market on Spearmint's crypto diversification plan once additional information is ready. These are truly exciting times for Spearmint and Spearmint shareholders."

This new project is in the direct vicinity of the Lake George Antimony Mine in New Brunswick which was operated intermittently from 1876 to 1996 and was once the largest primary antimony producer in North America. Antimony's primary uses are:

- **Semiconductors and Electronics:** The growing electronics and semiconductor industries require antimony, making it a critical material for technological development, including infrared sensors and components for military and aerospace uses.
- **Battery Technology:** Antimony is also used in lead-acid batteries and in emerging technologies, such as energy storage and lithium-ion battery enhancements, which is a significant driver of demand in the future.
- **Flame Retardants:** The demand for antimony remains strong due to its use in flame-retardant materials, which are essential in a wide range of products like textiles, electronics, and plastics. As safety regulations around fire-resistant materials become stricter, the need for antimony-based compounds continues to grow.

About Spearmint Resources Inc.

Spearmint's projects include four projects in Clayton Valley, Nevada: the 1,136-acre McGee lithium clay deposit, which has a resource estimate of 1,369,000 indicated tonnes and 723,000 inferred tonnes of lithium carbonate equivalent (LCE) for a total of 2,092,000 tonnes of LCE, directly bordering Pure Energy Minerals & Century Lithium Corp.; the 280-acre Elon lithium brine project, which has access to some of the deepest parts of the only lithium brine basin in production in North America; the 124-acre Green Clay lithium project; and the 248-acre Clayton Ridge gold project and now the 1,945 acres George Lake South Antimony Project in New Brunswick.

For a cautionary note and disclaimer on the crypto diversification, please refer to the news release dated November 12, 2024.
