

AURWEST ANNOUNCES TERMINATION OF OPTION AGREEMENTS ON PARADISE LAKE & MIGUELS LAKE PROPERTIES

CALGARY, ALBERTA (February 15, 2024) – Aurwest Resources Corporation (“**Aurwest**” or the “**Company**”) (CSE: **AWR**) announces that it has provided a termination notice for both of its Option Agreements in Central Newfoundland with Tenacity Gold Mining Company Ltd. and Alexander Duffitt, (the “Optionors”) dated November 6, 2020 (“the Option Agreements”). Under the terms of the Option Agreements, the Company had the right to earn up to 100% interest in the Paradise Lake & Miguel’s Lake properties in Central Newfoundland.

Cameron MacDonald, interim Chief Executive Officer of the Company states, “Given the difficulty in raising capital in the current junior equity markets, the Company has deemed the ability to comply with the terms of the Option Agreements as too much of a financial burden for the Company at the current stage to continue”. In particular, the Company considered the following key factors:

1. **High Work Commitments and Costs:** In accordance with the Option Agreements, these two Newfoundland projects require an additional investment totaling approximately \$3.5 million between today’s date and November 2025, inclusive of option payments and exploration commitments. The associated financial burden was deemed by the Company as being unsustainable in this market, and significantly surpassing the now highest work commitment in the Company’s current project portfolio, which stands at \$2.4 million.
2. **Equity Financing:** Given the current state of the junior mining markets, while also considering valuation and dilution, raising sufficient capital to finance these two Newfoundland projects through till completion, while satisfying the Option Agreements, was deemed unattainable by the Company.
3. **Timely Action:** Termination of the Option Agreements was a prudent step to maintain good standing of certain claims while considering both the Company and the Optionors best interests.
4. **Focus:** Terminating the Option Agreements now means the Company can focus its capital and efforts on its 100% owned projects in British Columbia. The Stars claims do not have a minimum work commitment and their associated tenures and will remain in good standing ranging from 2026 to 2029, which provide financial flexibility and optionality.

Stars & Stellar – A unique opportunity to unlock a District Scale Copper Porphyry Project

The Company will now focus its efforts on its early-stage porphyry copper-gold- silver-molybdenum properties, Stellar & Stars projects located in British Columbia. The Company currently holds both these interests in its wholly owned subsidiary ‘Copper Star Exploration Ltd.’. The Stellar project is a 100% interest totaling 6,073 hectares and an additional 3,762 hectares of continuous claims at the Stars property, located 65 km southwest of Houston, British Columbia.

The Stars discovery exhibits high-grade, drill ready targets which require further exploration and can be accessed year-round. The Company acquired 100% of all three mineral tenures in the Stars project through two acquisitions, see the press releases dated December 13, 2021, and September 30, 2021, which discloses the details of these acquisitions. The mineralization consists of porphyry style veins hosted and disseminated chalcopyrite/bornite, and quartz vein hosted molybdenite with low but significant concentrations of copper, gold, silver and molybdenum. In 2017 and 2018, a diamond drill program consisting of 16 holes, totaling 6,472 m, discovered the “Tana Zone” a continuously expanding mineralized porphyry intrusion intersected over 400 m of copper mineralization extending the entire length of drill hole DH-010, ending in mineralization at a final depth of 490 m.

Historical Drilling Highlights at “Tana Zone” Stars Project

- DD18SS004 – **204 m of 0.45 % Cu** from 23.5 m to 227.7 m, including 40.2 m of 0.93% Cu and 3.27 g/t Ag.
- DD18SS010 – **405 m of 0.20 % Cu** from 29.6 m to 435.0 m, including 30.5 m of 0.40% Cu and 1.34 g/t Ag.
- DD18SS013 – **73 m of 0.30 % Cu** from 54.3 m to 127.4 m, including 15.5m of 0.40% Cu and 1.46 g/t Ag.
- DD18SS015 – **67 m of 0.35 % Cu** from 231.0 m to 298.1 m, with an additional 9.9m (444.4 m – End of Hole) interval of 0.45 % Cu.
