

**FORM 51-102F3  
MATERIAL CHANGE REPORT**

**CONTENT OF MATERIAL CHANGE REPORT**

**Item 1 Name and Address of Company**

Far Resources Ltd. (the “Company” or “Far Resources”)  
302-1620 West 8<sup>th</sup> Avenue  
Vancouver, B.C.  
V6J 1V4

**Item 2 Date of Material Change**

August 20, 2012

**Item 3 News Release**

The information pertaining to this material change was disseminated by news release via the services of TheNewswire.ca on August 20, 2012.

**Item 4 Summary of Material Change**

Far Resources has acquired an option to purchase, subject to a 3% net smelter return royalty (of which 2% can be bought back), a 100% interest in the Silver Switchback property located southwest of Smithers in central British Columbia (the “Property”).

Pursuant to an option agreement with Multiple Metals Resources Ltd., a private B.C. company (“MMR”), the Company can earn a 100% interest in the Property, subject to a 3.0% net smelter return royalty, by making cash payments totaling \$255,000 and issuing 1,000,000 common shares of the Company over a period of four years, of which \$15,000 cash and 200,000 shares are payable upfront. In addition, the Company is required to incur exploration expenses of \$200,000 on the Property over a period of two years, of which \$100,000 must be incurred as a firm commitment prior to December 31, 2012.

The Company is also responsible for keeping the Property in good standing and, if terminating the option, will return the Property to MMR with a minimum of 12 months assessment work. MMR will retain a 3.0% net smelter return royalty, subject to the Company’s right to purchase back up to 2.0% at any time for \$2,000,000 based on \$500,000 per 0.5% segment.

**Item 5 Full Description of Material Change**

Far has acquired of an option to purchase, subject to a 3% net smelter return royalty (of which 2% can be bought back), a 100% interest in the Silver Switchback property located southwest of Smithers in central British Columbia (the “Property”). Previous reconnaissance sampling program on the Property by Silver Quest Resources Ltd. in 2006 had returned anomalous silver and copper values up to **802.0 grams per tonne silver (23.39 ounces per ton) and 7.24 % copper** from a mineralized grab sample (#51687).

The Property, located midway between Terrace and Smithers in central British Columbia along the west flank of the Howson Range, comprises approximately 3,125 hectares and is readily accessible by logging roads from Terrace. Several historic showings of silver, copper and gold occur on the Property; however, sampling of a new road cut in 1995 returned significant silver and copper values that prompted the acquisition of the Property and the recent prospecting and sampling program. This

occurrence, known as the “Switchback Zone”, has been defined discontinuously over a length of more than 300 metres by grab and chip samples taken in 2006 by Silver Quest from a gossanous shear zone with the following results:

<b>Sample #</b>	<b>Type</b>	<b>Silver g/t</b>	<b>Copper %</b>
51686	Chip 0.35 m	10.3	0.37
51685	Chip 0.5 m	44.5	0.14
51687	grab	802.0	7.24
51688	chip 1.25 m	4.3	0.11
51691	grab	0.9	0.01
51692	Chip 0.4 m	20.1	0.17
51689	Chip 1.25 m	86.7	0.10

The 2006 assay results were performed at Eco Tech Laboratory in Kamloops, B.C.

Sample 51689 was taken from the lower portion of the road cut, and all the remaining samples were taken from discontinuous outcrops over a length of about 300 metres along the upper road cut. All samples are moderately to strongly oxidized, hosted in early Jurassic age volcanic rocks of the Hazelton Group. The volcanic sequence strikes northerly, dips moderately to the east and consists of maroon, reddish and purple and grey-green coarse pyroclastics and finer grained, well-bedded tuffs. Sulphide mineralization is dominated by pyrite, with minor chalcopyrite, galena and arsenopyrite noted, along with occasional copper oxides (Silver Quest Press Release, October 12, 2006).

Sampling in 1995 (BC Assessment report #24405) from the upper Switchback occurrence returned similar results (table below):

<b>Sample #</b>	<b>Type</b>	<b>Silver g/t</b>	<b>Copper %</b>
5648	Grab	8.0	0.19
5513	Grab	28.7	0.09
5512	Grab	257.1	4.49
5511	Chip 2.0 m	357.9	2.38
5510	Grab	1.8	0.09
5509	Grab	4.8	2.38
5508	Grab	12.1	0.02
5649	Grab	12.7	0.09
5507	Chip 2.5 m	0.1	0.01
5650	Grab	572.9	6.69

Although preliminary sampling in 1995 and 2006 from the Switchback zone has returned encouraging indications of widespread silver and copper mineralization, sampling has not systematically tested the target areas, and additional exploration is required to determine the full extent of the mineralization.

The silver and copper mineralization and associated alteration at the Property are subtle and, at this time, the controls of mineralization are not well understood. However, the Company believes that the mineralization may be similar to “sediment-hosted stratabound copper-silver deposits” or “volcanic hosted (tuffs) redbed deposits”. These types of deposits constitute significant producers of both silver and copper throughout the world. With excellent access via logging roads, it is anticipated that the Switchback Zone can be quickly advanced to the drilling stage.

The Property is being acquired under terms of an option agreement with Multiple Metals Resources Ltd., a private B.C. company (“MMR”). The Company can earn a 100% interest in the Property, subject to a 3.0% net smelter return royalty, by making cash payments totaling \$255,000 and issuing 1,000,000 common shares of the Company over a period of four years, of which \$15,000 cash and 200,000 shares are payable upfront. In addition, the Company is required to incur exploration expenses of \$200,000 on the Property over a period of two years, of which \$100,000 must be incurred as a firm commitment prior to December 31, 2012.

The Company is also responsible for keeping the Property in good standing and, if terminating the option, will return the Property to MMR with a minimum of 12 months assessment work. MMR will retain a 3.0% net smelter return royalty, subject to the Company’s right to purchase back up to 2.0% at any time for \$2,000,000 based on \$500,000 per 0.5% segment.

**FAR RESOURCES OPTIONS SILVER SWITCHBACK PROPERTY**

**VANCOUVER**, British Columbia, Canada /**August 20, 2012**/ **CNSX:FAT**/ Far Resources Ltd. ("Far" or the "Company") is pleased to announce that is has acquired an option to purchase, subject to a 3% net smelter return royalty (of which 2% can be bought back), a 100% interest in the Silver Switchback property located southwest of Smithers in central British Columbia (the "Property"). Previous reconnaissance sampling program on the Property by Silver Quest Resources Ltd. in 2006 had returned anomalous silver and copper values up to **802.0 grams per tonne silver (23.39 ounces per ton) and 7.24 % copper** from a mineralized grab sample (#51687).

The Property, located midway between Terrace and Smithers in central British Columbia along the west flank of the Howson Range, comprises approximately 3,125 hectares and is readily accessible by logging roads from Terrace. Several historic showings of silver, copper and gold occur on the Property; however, sampling of a new road cut in 1995 returned significant silver and copper values that prompted the acquisition of the Property and the recent prospecting and sampling program. This occurrence, known as the "Switchback Zone", has been defined discontinuously over a length of more than 300 metres by grab and chip samples taken in 2006 by Silver Quest from a gossanous shear zone with the following results:

<b>Sample #</b>	<b>Type</b>	<b>Silver g/t</b>	<b>Copper %</b>
51686	Chip 0.35 m	10.3	0.37
51685	Chip 0.5 m	44.5	0.14
51687	grab	802.0	7.24
51688	chip 1.25 m	4.3	0.11
51691	grab	0.9	0.01
51692	Chip 0.4 m	20.1	0.17
51689	Chip 1.25 m	86.7	0.10

The 2006 assay results were performed at Eco Tech Laboratory in Kamloops, B.C.

Sample 51689 was taken from the lower portion of the road cut, and all the remaining samples were taken from discontinuous outcrops over a length of about 300 metres along the upper road cut. All samples are moderately to strongly oxidized, hosted in early Jurassic age volcanic rocks of the Hazelton Group. The volcanic sequence strikes northerly, dips moderately to the east and consists of maroon, reddish and purple and grey-green coarse pyroclastics and finer grained, well-bedded tuffs. Sulphide mineralization is dominated by pyrite, with minor chalcopyrite, galena and arsenopyrite noted, along with occasional copper oxides (Silver Quest Press Release, October 12, 2006).

Sampling in 1995 (BC Assessment report #24405) from the upper Switchback occurrence returned similar results (table below):

<b>Sample #</b>	<b>Type</b>	<b>Silver g/t</b>	<b>Copper %</b>
5648	Grab	8.0	0.19
5513	Grab	28.7	0.09
5512	Grab	257.1	4.49
5511	Chip 2.0 m	357.9	2.38
5510	Grab	1.8	0.09
5509	Grab	4.8	2.38
5508	Grab	12.1	0.02
5649	Grab	12.7	0.09
5507	Chip 2.5 m	0.1	0.01
5650	Grab	572.9	6.69

Although preliminary sampling in 1995 and 2006 from the Switchback zone has returned encouraging indications of widespread silver and copper mineralization, sampling has not systematically tested the target areas, and additional exploration is required to determine the full extent of the mineralization.

The silver and copper mineralization and associated alteration at the Property are subtle and, at this time, the controls of mineralization are not well understood. However, the

Company believes that the mineralization may be similar to "sediment-hosted stratabound copper-silver deposits" or "volcanic hosted (tuffs) redbed deposits". These types of deposits constitute significant producers of both silver and copper throughout the world. With excellent access via logging roads, it is anticipated that the Switchback Zone can be quickly advanced to the drilling stage.

The Property is being acquired under terms of an option agreement with Multiple Metals Resources Ltd., a private B.C. company ("MMR"). The Company can earn a 100% interest in the Property, subject to a 3.0% net smelter return royalty, by making cash payments of \$255,000 and issuing 1,000,000 common shares of the Company over a period of three years, of which \$15,000 cash and 200,000 shares are payable upfront. In addition, the Company is required to incur exploration expenses of \$200,000 on the Property, of which \$100,000 must be incurred prior to December 31, 2012.

The Company is also responsible for keeping the Property in good standing and, if terminating the option, will return the Property to MMR with a minimum of 12 months assessment work. MMR will retain a 3.0% net smelter return royalty, subject to the Company's right to purchase back up to 2.0% at any time for \$2,000,000 based on \$500,000 per 0.5% segment.
