

Far Resources Receives Work Permit for Zoro1 Lithium Pegmatite Drill Program, Snow Lake Manitoba

June 7, 2016 - VANCOUVER, BRITISH COLUMBIA: Far Resources Ltd. (CSE:FAT) ("Far Resources" or "the Company") is pleased to announce that it has received a work permit from the government of Manitoba for their planned drill program to assess seven lithium-rare metal bearing pegmatites on its Zoro1 claim, Snow Lake, Manitoba (see news release dated April 28, 2016).

The Zoro1 Drill Program

The Zoro1 property (the "Property") has been the focus of historic drilling, however, many of the drill holes collared on the property were shallow and tested pegmatite above 200 m. The Company's upcoming drill campaign will assess the deeper portions of the Property where pegmatite drill intercepts between 30 and 50 m were encountered. This includes the high-grade Dyke#5 where grades of 2.42% to 7.28% Li₂O (see news release dated April 28, 2016) were intersected in a zone of multiple pegmatite dykes and andesite host rocks over 60-82 m in multiple drill holes. A compilation of historic drill results from the assessment files of the Manitoba government indicate Dyke#5 was 305 m long x 12 m wide.

Currently, historic and drill collar information is being used to construct a three-dimensional model that will aid drill targeting and place each of the seven known lithium-bearing pegmatites in spatial context to one another on the Property. Drill tenders are being reviewed and a contract will be awarded in the near future.

The above estimate of grade and intercept width is historical and was calculated prior to the implementation of National Instrument 43-101 *Standards of Disclosure of for Mineral Projects* ("NI 43-101") using historical terminology and is not meant to be interpreted as a current estimate as defined in sections 1.2 and 1.3 of NI 43-101. The grades are presented solely to provide a historical frame of reference and as a guide to future exploration. Although believed to be reliable, no "qualified person" as defined in NI 43-101 has done sufficient work to classify the historical estimate as a current mineral resource or mineral reserve. Accordingly, the Company is not treating the historical estimate as a current mineral resource or mineral reserve and it should not be relied upon. Further exploration including new diamond drilling will be required to assess and verify the historical estimate as current mineral resources or mineral reserves.

The scientific and technical information regarding the Zoro1 Property contained in this news release has been approved by Mark Fedikow, P.Geo., a consultant of Far Resources and a "qualified person" as defined in NI 43-101.

About the Company

Far Resources Ltd. is an exploration company, publicly traded on the Canadian Securities Exchange under the symbol FAT, focused on the identification and development of high potential mineral opportunities in stable jurisdictions.

ON BEHALF OF THE BOARD OF DIRECTORS OF

FAR RESOURCES LTD.

“Keith C. Anderson”

President
