

RECHARGE RESOURCES ENTERS IN TO AGREEMENT TO ACQUIRE 50% INTEREST IN REDONDA COPPER PROJECT WITH RECENT DRILL INTERCEPTS OF UP TO 142.6 METERS .279% COPPER .0281 MOLYBDENUM

Vancouver, BC – November 11th, 2024 – Recharge Resources Ltd. ("Recharge" or the "Company") (RR: CSE) (RECHF: OTC) (SL5: Frankfurt) has entered into a binding earn-in option agreement (the "Agreement") with Stamper Oil and Gas Ltd. ("Stamper" or the "Optionor") whereby Recharge may earn up to a 50% interest in the Redonda Project (the "Project"), located within the Vancouver Mining Division of British Columbia.

Figure 1 – Boyles 25 Diamond Drill on Setup #1 during previous drill campaign at Redonda Copper Project

Recent drilling at the project returned up to 142.6 Meters (467.8 of Feet) .279% Cu, .0281% Mo. (See Figure 2 & 3).

Figure 2. Hole 5 at 14.33 Meters

The Project, previously explored by Teck Resources Limited (previously Teck Corp.) (“Teck”) has had a total of 14 holes drilled all showing consistent values with widespread mineralization near surface. Teck drilled a total of nine NQ core holes for a total of 1,681 metres (5,515 feet) at the Project in 1979 with recent follow up drilling completed in 2023 for a total of 5 holes and 799.81m (2,624 ft.).

The Project encompasses nine claims covering a total of 2,726 hectares (6,736 acres) and is situated 40 kilometers northeast of Campbell River, B.C. The Redonda Project benefits from year-round access via regularly scheduled barge service from Campbell River through Marine Link Transportation, marine freight solutions provider. From Redonda Bay, access to the project is facilitated by five kilometers of recently upgraded logging road. Active logging operations ensure a well-maintained network of forest service roads throughout the claims area. Work in 2021 proceeded under a letter of support from the Klahoose First Nation, acknowledging its traditional territory, along with a free use permit, drill permit, and induced polarization (IP) exemption from the Province of British Columbia’s Ministry of Energy, Mines, and Low Carbon Innovation (EMLI).

Transaction Terms

The Optionor hereby grants to the Optionee the sole and exclusive right and option to acquire a 50% interest in and to the Property, free and clear of all liens, charges, encumbrances, claims, rights or interest of any other person, in accordance with the terms and conditions of this Agreement.

In order to exercise the Option, payment of Expenditures on the Property of One Hundred and Thirteen Thousand Dollars (\$113,000) must be sent to HomeGold on/or before December 31, 2024.

Additionally, Stamper has granted Recharge the right of first refusal and the potential to acquire a majority interest exceeding 50%, with terms to be finalized at a later date.

Recharge may elect to purchase from the Optionor at any time one-half of the NSR Royalty (being one percent [1.5%]), upon the payment to HomeGold Resources Ltd. (“**HomeGold**”) of One Million Five Hundred Thousand Dollars (\$1,500,000)

The following schedule reflects maintaining a 50% option on the property

Date	Shares	Cash Payments	Expenditures
1st year 2024			\$113,000
4th year Anniversary 2025		\$30,000	\$50,000
5th year Anniversary 2026		\$200,000	
Total:	4,000,000*	\$230,000	\$163,000

*4 million shares delivered within 30 days from the date of this Agreement, vesting 10% after 4 months, and then 15% every 4 months thereafter.

Figure 3. 2023 Drill Results combined with Historic 1979 Intercepts

Further Trenching Sampling returned consistent values with the drilling returning up to 45 meters of .18% Copper and .13% Molybdenum at surface, as outlined below:

Trench No.	Sample Length (m)	% Copper	% MoS ₂
66-4	45 m	0.18	0.13
66-6	52 m	0.19	0.02
66-7	49 m	0.22	0.02
66-8	88 m	0.24	0.01
66-9	64 m	0.33	0.03
66-10	24 m	0.20	0.02

Figure 4. 1966 Trench Mineralization

The regional setting of the Redonda Property is part of the Coast suture zone between the Wrangellia terrane and the Coast plutonic complex. In the claim area, early Cretaceous dioritic intrusive rocks of the Coast plutonic complex have been intruded by at least three later intrusive units, including a quartz plug, a previously interpreted wide hornblende dike that which is locally brecciated over its 600-metre exposed length and several smaller feldspar dikes that cut dioritic rocks near the southwest margin of the previously interpreted hornblende-rich body. Higher concentrations of copper-molybdenum mineralization are closely associated with the hornblende dike, particularly in areas where it has been brecciated. The geological setting of the mineralization on the Redonda mineral claims shares a number of features similar to those observed at the OKover copper-molybdenum porphyry deposit located 34 kilometres to the southeast, north of Powell River and the Gambier copper deposit in Howe Sound.

Qualified Person

The scientific and technical information contained in this news release has been reviewed and approved by Lawrence Segerstrom, a consulting geologist who is a "Qualified Person" as such term is defined under *National Instrument 43-101 - Standards of Disclosure for Mineral Projects ("NI 43-101")*.

About Recharge Resources

Recharge Resources is a Canadian mineral exploration company focused on exploring and developing the production of high-value battery metals and uranium to create green, renewable energy to meet the demands of the advancing electric vehicle and fuel cell vehicle market.

All Stakeholders are encouraged to follow the Company on its social media profiles on [LinkedIn](#), [Twitter](#), [Facebook](#) and [Instagram](#).
