Altitude Acquires New Coking Coal Lease Applications at its Altitude North Property

Coking Coal Prices Continue to Surge – futures over \$300US

CALGARY, ALBERTA: Altitude Resources Inc. (TSX-V: ALI) (“Altitude”) is pleased to announce that it has acquired new Alberta Crown coal lease applications adjoining its Altitude North property in west central Alberta. The additional coal leases cover an area of 842 ha (see map) and are located near Grande Cache, Alberta approximately 60 km north-west of the company’s Palisades Coal Project and less than 10 km from the Grande Cache Coal Mine property. The Altitude North Project’s close proximity to CN rail (running on spare capacity) means that coal from the project can be shipped to either Vancouver or Prince Rupert ports, both of which currently have spare capacity. The addition of the new lease applications increases the company’s land position at its Altitude North Project to approximately 9,094 ha.

Altitude North Coal Lease Extension Location Map

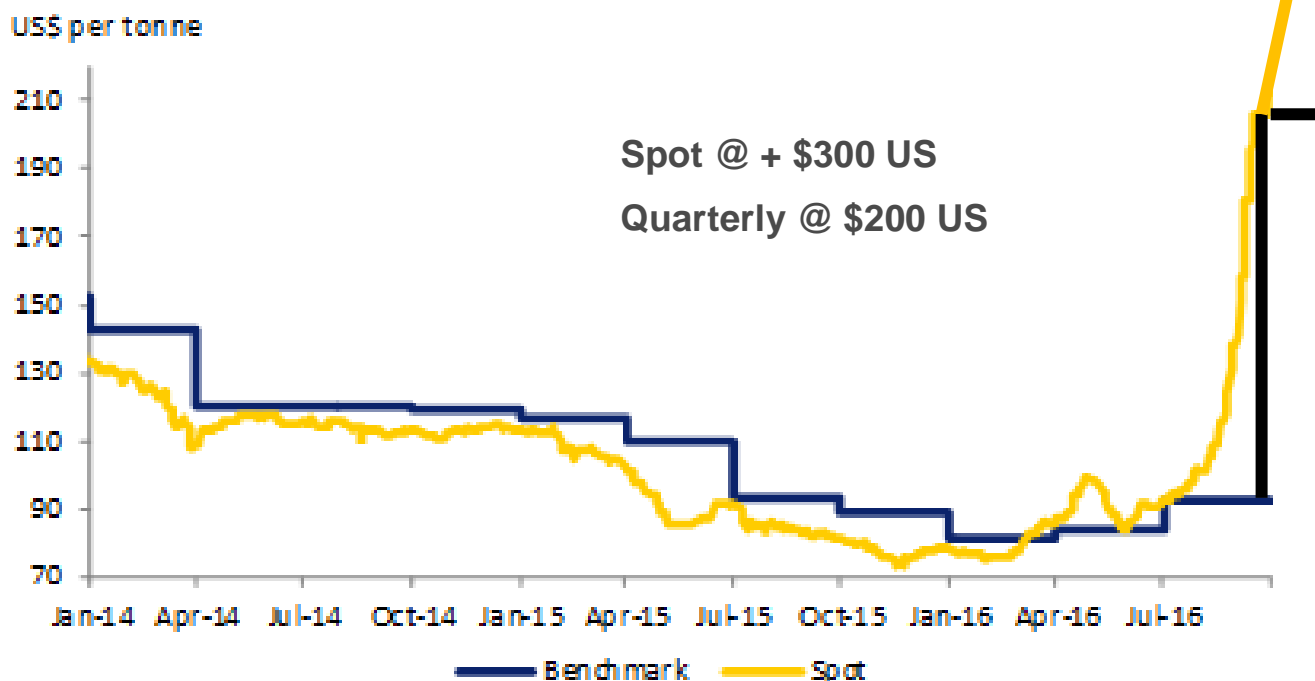

In 2014 Altitude Resources Inc. announced that it had discovered a multiple near surface mid-volatile coking coal deposit at its Altitude North property. The property stretches over a length of 23 km (northwest to southeast). Seven individual seams were identified ranging in estimated true thickness from .3 to 6.0 m. Significant coal seam intersections were identified and stretched along the entire extent of the property. Testing indicated the coal rank to be Mid Volatile Coking coal. Initial historic Alberta government

exploration reports showed some coal outcrops which were identified from field work in the 1960 – 1980s but there are no reports of any field drilling.

“Altitude North is one of the few areas remaining in Alberta which has never been properly explored for coking coal. It offers us an excellent opportunity to prove up a potentially significant mid volatile coking coal deposit close to rail and port with spare capacity during this period of robust commodity pricing,” said Gene Wusaty, Altitude’s CEO. “We are now planning for a larger, more comprehensive field program for 2017 to further explore the property and determine potential drilling targets”.

Coking Coal - Spot vs Quarterly Benchmark

Source: TSI, Company data

A quarterly price of USD\$200 per tonne for premium coking coal deliveries is in place for the last quarter of the 2016 calendar year. While this represents a rise of 116% over the previous quarter USD\$92.50, it's a long way away from spot prices, which have recently peaked in excess of USD\$300/tonne.

About Altitude

Altitude Resources Inc. is a Canadian coking coal exploration and development company focused on developing its portfolio of coking coal properties in west-central and southwestern Alberta, Canada. The Palisades, Elan and Altitude North, properties are located near rail lines which have capacity to provide transport of coal to deep-water ports on the west coast of Canada to service the growing demand from world markets.
