1. Nature of Operations

Zadar Ventures Ltd. ("Zadar" or the "Company") was incorporated on August 6, 2008 under the Business Corporations Act of British Columbia and its principal activity is the exploration of mineral properties. Zadar is a public company with shares listed on the TSX Venture Exchange. The head office, principal address and records office of the Company are located at Suite 1500 – 888 Dunsmuir Street, Vancouver, British Columbia, Canada, V6C 3K4.

Going concern of operations

These financial statements have been prepared assuming the Company will continue on a going-concern basis. The Company has incurred $2,322,635 of losses since its inception and the ability of the Company to continue as going-concern depends on its ability to raise adequate financing and to develop profitable operations. This creates a material uncertainty and raises significant doubt about the Company's ability to continue as a going concern.

Management is actively targeting sources of additional financing. Although the Company has been successful in past financings, there is no assurance that future financings will be successful. As the Company is in the exploration and evaluation stage, the Company has not identified a known body of commercial grade mineral on any of its properties. The ability of the Company to realize the costs it has incurred to date on these properties is dependent upon the Company identifying a commercial mineral body, to finance its development costs and to resolve any environmental, regulatory or other constraints which may hinder the successful development of the property.

2. Basis of Preparation

These interim financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB") applicable to the preparation of interim financial statements, including IAS 34, Interim Financial Reporting. The interim financial statements should be read in conjunction with the annual financial statements for the year ended July 31, 2014, which have been prepared in accordance with IFRS as issued by the IASB.

The accounting policies adopted are consistent with those of the previous financial year. The interim financial statements were approved by the Board of Directors on July 6, 2015.

All dollar amounts are presented in Canadian dollars unless otherwise specified.

On acquisition, the GRIT shares were valued at $1,248,000. The GRIT shares have been designated as held for trading and are recorded at fair value, with unrealized gains and losses recognized in profit or loss. At April 30, 2015, the fair value of the GRIT shares is $200,934.

Option pricing models require the input of highly subjective assumptions, particularly the expected stock price volatility. Changes in the subjective input assumptions can materially affect the fair value estimate, and therefore the existing models do not necessarily provide a reliable single measure of the fair value of the Company's stock options.

6. Financial Instruments and Risk Management

Fair Values

Financial instruments measured at fair value are classified into one of three levels in the fair value hierarchy according to the relative reliability of the inputs used to estimate the fair values. The three levels of the fair value hierarchy are:

Level 1 – Unadjusted quoted prices in active markets for identical assets and liabilities

Level 2 – Inputs other than quoted prices that are directly or indirectly observable for the asset or liability; and

Level 3 – Inputs that are not based on observable market data.

Investments are carried at level 1 fair value measurement.

The carrying values of cash, due from/to related parties, accounts payable and accrued liabilities approximate their fair value due to the short-term nature of these instruments.

Credit risk

Credit risk is the risk of financial loss to the Company if a customer or counterparty to a financial instrument fails to meet its contractual obligations. The Company's cash and due from related parties are subject to credit risk. The Company manages credit risk by placing cash with major Canadian financial institutions. Management believes that credit risk related to these amounts is nominal.

Liquidity risk

Liquidity risk arises from the excess of financial obligations over available financial assets due at any point in time. The Company's approach to managing liquidity risk is to try to have sufficient liquidity to meet liabilities when due. As at April 30, 2015, the Company had a cash balance of $553 to settle current liabilities of $351,805. All of the Company's accounts payable and accrued liabilities have contractual maturities of 30 days or due on demand and are subject to normal trade terms. To maintain liquidity, the Company is currently investigating financing opportunities and recently completed a share exchange agreement (Note 3) and private placement. Management intends to continue to finance its activities by raising funds by private equity investments. While the Company has been successful in obtaining its required funding in the past there is no assurance that this financing will be extended or that any additional future financing will be available. The Company is exposed to risk that it will encounter difficulty in satisfying its liabilities. The Company may mitigate this risk by selling its investment to cover its current liabilities.

6. Financial Instruments and Risk Management (continued)

Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates, foreign exchange rates, and commodity and equity prices.

Interest rate risk

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The Company's exposure to interest rate risk is not material.

Foreign currency risk

Foreign currency risk is the risk that the future cash flows or fair value of the Company's financial instruments that are denominated in a currency that is not the Company's functional currency will fluctuate due to the change in foreign exchange rate.

The functional currency of the Company is the Canadian dollar. The Company does not conduct business outside of Canada. However, the Company holds an investment that is denominated in British Pounds. As such, it is subject to fluctuations in the exchange rates for the Canadian dollar and British Pound. As at April 30, 2015, the Company has a held for trading investment with a fair value of $200,934. Each 10% change in the Canadian dollar versus the British Pound will result in a gain/loss of approximately $30,000.

Other price risk

Other price risk is the risk that changes in market prices including commodity or equity prices will have an effect on the fair value or future cash flows associated with financial instruments. The equity price risk associated with the Company's current held for trading investment primarily relates to the change in the market prices of the investments in the portfolio. As at April 30, 2015, the Company owns 676,129 GRIT common shares with each common share valued at $0.30. Management believes there is price risk related to this investment.

7. Capital Management

The Company includes cash and equity, comprising issued common shares, contributed surplus and deficit in the definition of capital.

The Company manages its capital to ensure it will be able to continue as a going concern largely through equity financing. These stock issues depend on numerous factors including a positive mineral exploration environment, positive stock market conditions, a company's track record, and the experience of management. The Company is not exposed to externally imposed capital requirements. There were no changes in the Company's approach to capital management during the period ended April 30, 2015.
