

LOBE SCIENCES LTD.

Management Discussion & Analysis

For the three months ended November 30, 2022 and 2021

This management discussion and analysis (“MD&A”) of the financial condition and results of operations of Lobe Sciences Ltd. and its subsidiaries (“Lobe” or the “Company”), prepared as at January 30, 2023, is for the three months ended November 30, 2022 and 2021. This MD&A is a supplement to and should be read in conjunction with the Company’s unaudited condensed interim consolidated financial statements for the three months ended November 30, 2022 and 2021 (“interim financial statements”). The Company’s interim financial statements have been prepared in accordance with International Financial Reporting Standards (“IFRS”) as issued by the International Accounting Standards (“IASB”) and interpretations of the International Financial Reporting Interpretations Committee applicable to the preparation of interim financial statements including International Accounting Standard 34 - *Interim Financial Reporting*. All amounts presented herein are stated in Canadian dollars unless otherwise indicated. The first, second, third and fourth quarters of the Company’s fiscal years are referred to as “Q1”, “Q2”, “Q3” and “Q4”, respectively. The years ended August 31, 2022 and 2021, are also referred to as “fiscal 2022” and “fiscal 2021”, respectively.

This MD&A has been prepared by reference to the MD&A disclosure requirements established under National Instrument 51-102 “Continuous Disclosure Obligations” of the Canadian Securities Administrators. Additional information regarding Lobe is available through the SEDAR website at www.sedar.com.

Forward Looking Information

This MD&A contains “forward-looking statements” that involve risks and uncertainties. Such information, although considered to be reasonable by the Company’s management at the time of preparation, may prove to be inaccurate and actual results may differ materially from those anticipated in the statements made. This MD&A may contain forward-looking statements that reflect the Company’s current expectations and projections about its future results. When used in this MD&A, words such as “estimate”, “intend”, “expect”, “anticipate” and similar expressions are intended to identify forward-looking statements, which, by their very nature, are not guarantees of the Company’s future operational or financial performance, and are subject to risks and uncertainties and other factors that could cause the Company’s actual results, performance, prospects or opportunities to differ materially from those expressed in, or implied by, these forward-looking statements. Readers are cautioned not to place undue reliance on these forward-looking statements, which speak only as of the date of this MD&A or as of the date otherwise specifically indicated herein. Due to risks and uncertainties, including the risks and uncertainties identified above and elsewhere in this MD&A, actual events may differ materially from current expectations. Such statements reflect management’s current views with respect to future events and are subject to risks and uncertainties and are necessarily based upon a number of estimates and assumptions that, while considered reasonable by the Company, are inherently subject to significant business, economic, competitive, political and social uncertainties and known or unknown risks and contingencies. Many factors could cause our actual results, performance, or achievements to be materially different from any future results, performance, or achievements that may be expressed or implied by such forward-looking statements. Please see the risk factors discussed under the heading “Risk Factors.”. There is a significant risk that such forward-looking statements will not prove to be accurate. Investors are cautioned not to place undue reliance on these forward-looking statements. No forward-looking statement is a guarantee of future results. The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, except as required by law.

Drug development involves long lead times, is very expensive and involves many variables of uncertainty. Anticipated timelines regarding drug development are based on reasonable assumptions informed by current knowledge and information available to the Company. Every patient treated on future studies can change those assumptions either positively (to indicate a faster timeline to new drug applications and other approvals) or negatively (to indicate a slower timeline to new drug applications and other approvals). This MD&A contains certain forward-looking statements regarding anticipated or possible drug development timelines. Such statements are informed by, among other things, regulatory guidelines for developing a drug with safety studies, proof of concept studies, and pivotal studies for new drug application submission and approval, and assumes the success of implementation and results of such studies on timelines indicated as possible by such guidelines, other industry examples, and the Company’s development efforts to date. In addition to the factors set out above and those identified in Company’s MD&A under the heading “Risk Factors”, other factors not currently viewed as material could cause actual results to differ materially from those described in the forward-looking statements. Although Lobe has attempted to identify important risks and factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors and risks that cause actions, events or results not to be anticipated, estimated or intended. Accordingly, readers should not place any undue reliance on forward-looking statements.

1. LOBE SCIENCES LTD.

Lobe was incorporated under the Business Corporations Act (British Columbia) on May 13, 2010. The head office, principal address and registered office of the Company are located at 1400 - 1199 West Hasting Street, Vancouver, B.C. V6E 3T5. The Company's common shares are listed under the symbol "LOBE" on the Canadian Securities Exchange and under the symbol "LOBEF" on the OTCQB.

On June 10, 2022, the Company consolidated its issued share capital on a ratio of six old common shares for every one new post-consolidated common share. All current and comparative references to the number of common shares, weighted average number of common shares, loss per share, stock purchase options, share purchase warrants, performance warrants, restricted share units and deferred share units have been restated to give effect to this share consolidation.

Lobe is a life sciences company focused on psychedelic medicines. The Company, through collaborations with industry-leading partners, is engaged in drug research and development using sub-hallucinatory doses of proprietary psychedelic compounds to improve brain and mental health and wellness. Initially the Company will develop psilocin-based therapeutics for the treatment of severe forms of anxiety such as post-traumatic stress disorder, cluster headaches, and an undisclosed pediatric Orphan disease associated with severe anxiety.

2. HIGHLIGHTS

FOR THE THREE MONTHS ENDED NOVEMBER 30, 2022 CONSOLIDATED FINANCIAL HIGHLIGHTS

- Net and comprehensive loss of \$ \$2,017,435 or \$0.03 per share, compared to net loss from continuing operations of \$4,574,516 or \$0.12 per share for the three months ended November 30, 2021. The decrease in net loss is related to a reduction in non-cash fair value changes on the consideration received from the sale of Cowlitz County Cannabis Cultivation, Inc. ("Cowlitz"), partially offset by non-cash consulting fees resulting from a mutual separation agreement with a Director of the Company and with an arm's length independent consultant.

NOVEMBER 30, 2022 COMPARED TO AUGUST 31, 2022 CONSOLIDATED BALANCE SHEET HIGHLIGHTS

- Cash was \$449,413, compared to \$907,537 at August 31, 2022, a decrease of 50%.
- Total assets were \$1,498,753, compared to \$1,747,695 at August 31, 2022, a decrease of 14% due to a decrease in cash, partially offset by an increase to prepaid expenses and deposit.
- Working capital deficit was \$639,512, compared to \$266,084 at August 31, 2022, a decrease of 140%.

3. 2023 BUSINESS DEVELOPMENT AND OVERVIEW

The Company, through collaborations with industry leading partners, is engaged in drug research and development using proprietary psilocin compounds to improve neurologic, brain and mental health and wellness. Lobe is currently working to develop effective psychedelic-based therapeutics for the treatment of severe forms of anxiety such as PTSD, cluster headaches and an undisclosed pediatric Orphan disease associated with severe anxiety.

Other than medicines that mask individual symptoms related to these conditions, there are currently few therapeutic options or US Food and Drug Administration ("FDA") approved drugs for the treatment of severe anxiety conditions and cluster headaches. The Company, intends to prove that clinical and physiological outcomes are improved by administering doses of L-130 or L131 our proprietary psilocin compounds. The Company expects these drugs to elicit positive clinical outcomes allowing patients to return to normal daily activities when suffering from severe anxiety and cluster headache patients should experience fewer and less debilitating headaches.

The Company intends to sponsor and work with licensed third parties to conduct any clinical trials and research and does not handle controlled substances. If the Company were to conduct this work without the reliance on third parties, it would need to obtain additional licences and approvals described below.

Relationships with Third Parties

Clearway Global LLC

On June 21, 2022, the Company announced an exclusive agreement with Clearway Global LLC ("Clearway") to lead the Company's global regulatory and development strategy and its implementation.

Ingenu Pty Ltd.

On September 1, 2022, the Company announced that it plans to conduct Phase 1b/2a clinical trials in Australia with iNGENū Pty Ltd. ("iNGENū").

Drug Development Program

The following summarizes the drug development program for L-130 and L-131:

L-130

On July 12, 2022, the Company filed patent 63/388,414, for a proprietary form of psilocin ("L-130"). L-130 is a molecular modification of naturally occurring psilocin, which is the active component of psilocybin. On October 13, 2022, the Company, through an exclusive pharmaceutical discovery and development Agreement with an FDA licensed manufacturer, completed the synthesis of bulk L-130 and of the clinical supplies to be used in upcoming trials. The L-130 was manufactured in compliance with U.S. Current Good Manufacturing Practices ("cGMPs").

The exclusive pharmaceutical discovery and development agreement provides the Company with an exclusive source of L-130. Affirming our access to cGMP pharmaceutical grade active pharmaceutical ingredients will enable us to efficiently conduct clinical trials and plan for further work using these differentiated compounds to investigate the safety and tolerability of the drug candidate, L-130 and measure absolute pharmacokinetics of this new chemical entity ("NCE"). As the Company continues to progress through the L-130 program, additional milestones related to the Phase 1b/2a clinical trial have been identified. The Company intends to:

- provide an interim pharmacokinetic and safety readout from the Phase 1/2a trial in the first half of calendar 2023; and,
- receive its first in human clinical trial full study report in calendar Q2 2023¹.

The Company and Clearway are preparing a pre-IND meeting request with the FDA to confirm its regulatory strategy and clinical protocols. We expect to have this meeting in the in the second half of calendar 2023. Following FDA's input, an IND will be filed and clinical trials will be initiated when it becomes active¹.

The Company intends to continue funding L-130 research in Australia with proceeds from convertible note financing bearing interest at 15% per annum with a term of 12 months (the "Convertible Notes") with Cantheon Capital ("Cantheon"). The Company intends to complete future clinical trials for this program in Australia through our research partner iNGENū. There is no assurance that the aforementioned timelines will be met. Anticipated timelines regarding drug development are based on reasonable assumptions informed by current knowledge and information available to the Company. Such statements are informed by, among other things, regulatory guidelines for developing a drug with safety studies, proof of concept studies, and pivotal studies for new drug application submission and approval, and assumes the success of implementation and results of such studies on timelines indicated as possible by such guidelines, other industry examples, and the Company's development efforts to date.

L-131

On July 7, 2022, the Company announced the advancement a second NCE, L-131 as our second NCE to enter clinical development, The exclusive pharmaceutical discovery and development agreement provides the Company with an exclusive source of L-131. Affirming our access to cGMP pharmaceutical grade active pharmaceutical ingredients will enable us to efficiently conduct clinical trials to investigate the safety and tolerability of the drug candidate, L-131 and measure absolute pharmacokinetics of this NCE. As the Company continues to progress through the L-131 program, additional milestones related to the Phase 1b/2a clinical trial have been identified.

¹ There is no assurance that the aforementioned timeline will be met or that the program will advance to clinical trials, at all. Anticipated timelines regarding drug development are based on reasonable assumptions informed by current knowledge and information available to the Company. Such statements are informed by, among other things, regulatory guidelines for developing a drug with safety studies, proof of concept studies, and pivotal studies for new drug application submission and approval, and assumes the success of implementation and results of such studies on timelines indicated as possible by such guidelines, other industry examples, and the Company's development efforts to date.

The Company intends to:

- provide results of preclinical rodent studies in the first half of calendar 2023 to evaluate its safety and pharmacokinetics. The studies will be a 28-day preclinical safety study; and
- provide results of human Phase 1 trials planned in calendar Q4 2023²;

The Company is also investigating filing a Pediatric Orphan Drug application with the FDA using L-131 in the first half of 2023. If approved by the FDA this Orphan Drug indication may qualify the Company for a Priority Review Voucher from the FDA³.

The Company intends to complete future clinical trials for this program in Australia. There is no assurance that the aforementioned timelines will be met. Anticipated timelines regarding drug development are based on reasonable assumptions informed by current knowledge and information available to the Company. Such statements are informed by, among other things, regulatory guidelines for developing a drug with safety studies, proof of concept studies, and pivotal studies for new drug application submission and approval, and assumes the success of implementation and results of such studies on timelines indicated as possible by such guidelines, other industry examples, and the Company's development efforts to date.

Intellectual Property

The Company has title to five provisional patent applications and one Patent Cooperation Treaty ("PCT") application as summarized below.

	Patent Application Number	Status	Description
1	Not yet known	Pending	Methods for Treating Mild Traumatic Brain Injury, Post Traumatic Stress Disorder, and Mild Traumatic Brain Injury
2	3,176,225	Pending	Methods for Treating Mild Traumatic Brain Injury, Post Traumatic Stress Disorder, and Mild Traumatic Brain Injury
3	21792649.2	Pending	Methods for Treating Mild Traumatic Brain Injury, Post Traumatic Stress Disorder, and Mild Traumatic Brain Injury
4	17/916,855	Pending	Methods for Treating Mild Traumatic Brain Injury, Post Traumatic Stress Disorder, and Mild Traumatic Brain Injury
5	PCT/US2021/037319	Pending	Methods and Compositions for Treating Post-Traumatic Stress Disorder or Mild Traumatic Brain Injury with Post Traumatic Stress Disorder
6	63/388,414	Pending	Preparation of Stable Psilocin Salts and Uses Thereof

Regulatory Framework and Licensing Regimen

The Company intends to sponsor and work with licensed third parties to conduct any clinical trials and research and does not handle controlled substances. If the Company were to conduct this work without the reliance on third parties, it would need to obtain additional licences and approvals described below.

Canada

In Canada, oversight of healthcare is divided between the federal and provincial governments. The federal government is responsible for regulating, among other things, the approval, import, sale, and marketing of drugs such as psilocybin and other psychedelic substances, whether natural or novel. The provincial/territorial level of government has authority over the delivery of health care services, including regulating health facilities, administering health insurance plans such as the Ontario Health

² There is no assurance that the aforementioned timeline will be met or that the program will advance to clinical trials, at all. Anticipated timelines regarding drug development are based on reasonable assumptions informed by current knowledge and information available to the Company. Such statements are informed by, among other things, regulatory guidelines for developing a drug with safety studies, proof of concept studies, and pivotal studies for new drug application submission and approval, and assumes the success of implementation and results of such studies on timelines indicated as possible by such guidelines, other industry examples, and the Company's development efforts to date.

³ This statement is based on the following material assumption: drug development involves long lead times, is very expensive and involves many variables of uncertainty. Anticipated timelines regarding drug development are based on reasonable assumptions informed by current knowledge and information available to the Company. As of the date hereof, it has not yet completed the aforementioned items. Such statements are informed by, among other things, regulatory guidelines for developing a drug with safety studies, proof of concept studies, and pivotal studies for new drug application submission and approval, and assumes the success of implementation and results of such studies on timelines indicated as possible by such guidelines, other industry examples, and the Company's development efforts to date. See "Risk Factors".

Insurance Plan, distributing prescription drugs within the province, and regulating health professionals such as doctors, psychologists, psychotherapists and nurse practitioners. Regulation is generally overseen by various colleges formed for that purpose, such as the College of Physicians and Surgeons of Ontario. Certain psychoactive compounds, such as psilocybin, are considered controlled substances under Schedule III of the Controlled Drugs and Substances Act (Canada) (the "CDSA"). In order to conduct any scientific research, including preclinical and clinical trials, using psychoactive compounds listed as controlled substances under the CDSA, an exemption under Section 56 of the CDSA ("Section 56 Exemption") is required. This exemption allows the holder to possess and use the controlled substance without being subject to the restrictions set out in the CDSA. The Company has not applied for a Section 56 Exemption from Health Canada. The possession, sale or distribution of controlled substances is prohibited unless specifically permitted by the government. A party may seek government approval for a Section 56 Exemption to allow for the possession, transport or production of a controlled substance for medical or scientific purposes. Products that contain a controlled substance such as psilocybin cannot be made, transported or sold without proper authorization from the government. A party can apply for a Dealer's Licence under the Food and Drug Regulations (Part J). In order to qualify as a licensed dealer, a party must meet all regulatory requirements mandated by the regulations including having compliant facilities, compliant materials and staff that meet the qualifications under the regulations of a senior person in charge and a qualified person in charge. Assuming compliance with all relevant laws (Controlled Drugs and Substances Act, Food and Drugs Regulations) and subject to any restrictions placed on the licence by Health Canada, an entity with a Dealer's Licence may produce, assemble, sell, provide, transport, send, deliver, import or export a restricted drug (as listed in Part J in the Food and Drugs Regulations – which includes psilocybin and psilocin) (see s. J.01.009 (1) of the Food and Drug Regulations).

United States

The FDA and other federal, state, local and foreign regulatory agencies impose substantial requirements upon the clinical development, clinical testing, approval, labeling, manufacture, marketing and distribution of drug products. These agencies regulate, among other things, research and development activities and the testing, approval, manufacture, quality control, safety, effectiveness, labeling, storage, record keeping, advertising and promotion of any prescription drug product candidates or commercial products. The regulatory approval process is generally lengthy and expensive, with no guarantee of a positive result. Moreover, failure to comply with applicable FDA or other requirements may result in civil or criminal penalties, recall or seizure of products, injunctive relief including partial or total suspension of production, or withdrawal of a product from the market. The Company intends to file an IND application related to L-130 for one or more clinical indications⁴.

Anticipated timelines related to regulatory filings are based on reasonable assumptions informed by current knowledge and information available to the Company. Psilocybin and psilocin are strictly controlled under the federal Controlled Substances Act, 21 U.S.C. §801, et. seq. ("CSA") as Schedule I substances. Schedule I substances by definition have no currently accepted medical use in the United States, a lack of accepted safety for use under medical supervision, and a high potential for abuse. Schedule I and II drugs are subject to the strictest controls under the CSA, including manufacturing and procurement quotas, security requirements and criteria for importation. Anyone wishing to conduct research on substances listed in Schedule I under the CSA must register with the United States Drug Enforcement Administration ("DEA") and obtain DEA approval of the research proposal. A majority of state laws in the United States also classify psilocybin and psilocin as Schedule I controlled substances. For any product containing psilocybin or any Schedule I substance to be available for commercial marketing in the United States, such substance must be rescheduled, or the product itself must be scheduled, by the DEA to Schedule II, III, IV or V. Scheduling determinations by the DEA are dependent on FDA approval of a substance or a specific formulation of a substance.

⁴ This statement is based on the following material assumption: drug development involves long lead times, is very expensive and involves many variables of uncertainty. Anticipated timelines regarding drug development are based on reasonable assumptions informed by current knowledge and information available to the Company. As of the date hereof, it has not yet completed the aforementioned items. Such statements are informed by, among other things, regulatory guidelines for developing a drug with safety studies, proof of concept studies, and pivotal studies for new drug application submission and approval, and assumes the success of implementation and results of such studies on timelines indicated as possible by such guidelines, other industry examples, and the Company's development efforts to date. See "Risk Factors".

4. SUMMARY OF QUARTERLY RESULTS

	Q1 2023	Q4 2022	Q3 2022	Q2 2022
Net loss and comprehensive loss	\$(2,017,435)	\$(2,369,301)	\$(1,961,634)	\$(3,112,634)
Basic and diluted net loss per share	\$(0.03)	\$(0.06)	\$(0.05)	\$(0.08)
Number of weighted average shares - Basic	70,575,069	38,442,056	38,712,285	37,438,997

	Q1 2022	Q4 2021	Q3 2021	Q2 2021
Net loss from continuing operations	\$(4,574,516)	\$(12,418,127)	\$(6,585,685)	\$(2,573,243)
Net income (loss) from discontinued operations	-	\$(4,655,427)	\$17,788,170	\$(1,889)
Comprehensive income (loss)	\$(4,574,516)	\$(17,072,942)	\$11,083,403	\$(2,674,216)
Basic and diluted income (loss) per share	\$(0.12)	\$(0.46)	\$0.32	\$(0.09)
Number of weighted average shares - Basic	37,438,997	37,438,997	34,384,468	28,243,324

The Company reported Net loss and comprehensive loss in Q4 2022 primarily related to a loss from fair value changes on Preferred Shares, a loss from fair value changes on common shares received as consideration for the sale of the of certain assets relating to Washington-based Cowlitz County Cannabis Cultivators LLC (the "Cowlitz Disposal Group") and an impairment loss on Eleusian's intangible assets.

The Company reported comprehensive income in Q3 2021 primarily related to the sale of the Cowlitz Disposal Group.

5. COMPARISON OF RESULTS FOR THE THREE MONTHS ENDED NOVEMBER 30, 2022 AND 2021

	Q1 2023	Q1 2022
	\$	\$
Advertising	60,000	91,417
Amortization	1,220	-
Consulting fees	1,381,022	363,229
General and administrative	66,637	70,675
Insurance	90,121	82,452
Professional fees	46,469	61,689
Research	285,515	323,537
Share-based compensation	18,107	149,539
Other expense	68,344	3,431,978
Net loss from continuing operations	2,017,435	4,574,516

Advertising

During Q1 2023, the Company incurred advertising expenses of \$60,000, compared to \$91,417 during Q1 2022. The decrease is due to lower spend in these discretionary expenses.

Amortization

During Q1 2023, the Company incurred advertising expenses of \$1,220, compared to \$nil during Q1 2022. The increase is due to intangible assets amortization which did not occur in Q1 2022.

Consulting fees

During Q1 2023, the Company incurred consulting fees of \$1,381,022, compared to \$363,229 during Q1 2022. The increase is due to mutual separation agreements with a Director of the Company and with an arm's length independent consultant entered in Q1 2023. As part of the agreements, the Company agreed to issue to an aggregate of 9,800,836 common shares of the Company valued at \$0.11 per common share, for total non-cash consideration of \$1,029,088 which was recorded as a consulting expense.

General and administration

During Q1 2023, the Company incurred general and administration expenses of \$66,637, compared to \$70,675 during Q1 2022. The expense has remained consistent period over period.

Insurance

During Q1 2023, the Company incurred insurance expenses of \$90,121, compared to \$82,452 during Q1 2022. The expense relates to a director and officers insurance policy that was put in place during Q1 2022.

Professional fees

During Q1 2023, the Company incurred professional fees of \$46,469, compared to \$61,689 during Q1 2022. The decrease is attributable to lower spend since the prior period as Q1 2022 included legal fees incurred in relation to general corporate matters of the Company.

Research

During Q1 2023, the Company incurred research expense of \$285,515, compared to \$323,537 during Q1 2022. The balance in Q1 2023 relates to the preparation for preclinical studies for L-130 and L-131 including consulting fee with our manufacturing partner and Clearway. The Company and its exclusive partners has initiated formal import and export permitting activities within the United States and Countries abroad. The balance in Q1 2022 relates to our research agreement with the University of Miami.

Share-based compensation

During Q1 2023, the Company incurred share-based compensation of \$18,107, compared to \$149,539 during Q1 2022. The Company uses the Black-Scholes valuation model for options, restricted share units ("RSUs") and deferred share units ("DSUs") granted to officers, management, and consultants. Share-based compensation expense decreased during Q1 2023 as compared to Q1 2022 due to the reversal of expenses associated with unvested RSUs and DSUs which were cancelled pursuant to the mutual separation agreement with a former Director.

Other expense

Consists of foreign exchange movements, dividend income, interest income, loss on change in fair value of common shares, loss on change in fair value of preferred shares, loss on change fair value of warrants, and share of loss on Krysalis. During Q1 2023, the Company incurred other expense of \$68,344, compared to \$3,431,978 during Q1 2022. The decrease in net loss is primarily the result of a reduction of a loss from change in fair value of preferred shares from \$3,584,148 at Q1 2022 to \$nil at Q1 2023.

6. LIQUIDITY, CASH FLOWS AND CAPITAL RESOURCES

6.1 Liquidity

Liquidity risk is the risk that the Company will encounter difficulties in meeting obligations associated with its financial liabilities and other contractual obligations. The Company's strategy for managing liquidity is based on the sale of Preferred Shares and dividend receivable, accessing capital markets through equity financing and achieving positive cash flows from operations to internally fund operating and capital requirements.

Factors that may affect the Company's liquidity are continuously monitored. These factors include fair value of the Preferred Shares and dividend receivable, patent application costs, research and development costs to develop the Company's patents, operating costs, capital costs, income tax refunds, foreign currency fluctuations, market immaturity and a highly fluid environment related to state and federal law passage and regulations. The Company's main use for liquidity is to fund the development of its research programs as noted above. The primary source of liquidity has been from public financing to date. The ability to fund operations, to make planned capital expenditures and execute the growth/acquisition strategy depends on the future operating performance and cash flows, which are subject to prevailing economic conditions, regulatory and financial, business and other factors, some of which are beyond the Company's control.

In the event that the Company is adversely affected by any of these factors and, as a result, the operating cash flows are not sufficient to meet the Company's working capital requirements there is no guarantee that the Company would be able to raise additional capital on acceptable terms to fund a potential cash shortfall. Consequently, the Company is subject to liquidity risk. As at November 30, 2022, the Company had working capital deficit of \$227,394, as follows:

<i>As at</i>	November 30, 2022	August 31, 2022
	\$	\$
Cash	449,413	907,537
Receivables	34,625	18,282
Prepaid expenses and deposits	313,133	110,102
Total current assets	797,171	1,035,921
Accounts payable and accrued liabilities	1,436,683	1,302,005
Total current liabilities	1,436,683	1,302,005
Working capital	(639,512)	(266,084)

The current Company had a working capital deficit of \$639,512 as at November 30, 2022, and incurred a net loss of \$2,017,435 during the three months ended November 30, 2022. As at November 30, 2022, the Company has an accumulated deficit of \$32,992,461. These factors form a material uncertainty that may raise significant doubt regarding the Company's ability to continue as a going concern. The Company's ability to continue as a going concern is dependent upon the Company's ability to raise sufficient financing to acquire or develop a profitable business. The Company intends on financing its future development activities and operations from the sale of equity securities and through debt financing through Convertible Notes. Management will continue to monitor and assess its capital resources to meet operating requirements over the next twelve months.

6.2. Cash Flows

Review of cash flow for the three months ended November 30, 2022 and 2021:

<i>Net cash provided by (used in)</i>	November 30, 2023	November 30, 2022
	\$	\$
Net loss and comprehensive loss	(1,044,744)	(659,055)
Investing activities	-	961,120
Financing activities	586,620	-
Cash, beginning of period	907,537	1,141,839
Cash, end of period	449,413	1,443,904

Cash used in operating activities during Q1 2023 was \$1,044,744, compared to cash used in operating activities of \$659,055 during Q1 2022. The increase in cash used in operating activities is attributable to the following:

- Net loss and comprehensive loss of \$2,017,435, compared to net loss from continuing operations of \$4,574,516 due primarily to non-cash changes in dividend income, consulting fees, changes in fair value of common shares, changes in fair value of preferred shares, changes in fair value of common shares, and share-based compensation. Included in net loss are non-cash items of \$27,079 for the three months ended November 30, 2022, compared to \$3,552,770 for the three months ended November 30, 2021.
- Movements in receivables decreased cash by \$16,343, compared to a \$175,042 increase for the three months ended November 30, 2021.
- Movements in prepaid expenses decreased cash by \$203,031, compared to a \$113,928 decrease for the three months ended November 30, 2021.
- Movements in accounts payable and accrued liabilities increased cash by \$138,928, compared to increasing cash by \$301,577 for the three months ended November 30, 2021.

Cash used in investing activities for the three months ended November 30, 2022 was \$nil as compared to \$961,120 during the three months ended November 30, 2021. Cash used in investing activities during the three months ended November 30, 2021 were the result of sale of common shares.

Cash provided by financing activities for the three months ended November 30, 2022 was \$586,620 as compared to \$nil during the three months ended November 30, 2021. Movements during Q1 2023 were the result of funds raised through private placements and on the exercise of stock options which were partially offset by share issue costs.

6.3 Capital Resources

The capital of the Company consists of consolidated equity, net of cash.

	November 30, 2022	August 31, 2022
	\$	\$
Cash	449,413	907,537
Receivables	34,625	18,282
Less:		
Accounts payable and accrued liabilities	(1,436,683)	(1,302,005)
Net capital	(952,645)	(376,186)
Add:		
Equity	62,070	445,690
Net capital and equity	(890,575)	69,504

The board of directors of the Company has overall responsibility for the establishment and oversight of the Company's risk management policies on an annual basis. The Company's board of directors identifies and evaluates the Company's financial risks and is charged with the responsibility of establishing controls and procedures to ensure financial risks are mitigated. The Company's objectives when managing capital are to maintain adequate capital resources to fund development of the Company's patents, operating costs and capital costs. The Company does not have any externally imposed capital requirements to which it is subject. The Company manages the capital structure and adjusts it in light of changes in economic conditions and the risk characteristics of the underlying assets. To maintain or adjust the capital structure, the Company may attempt to issue new common shares for cash consideration. The Company's investment policy is to invest excess cash in investment instruments at high credit, quality financial institutions with terms to maturity selected with regards to the expected time of expenditures from continuing operations.

7. OFF-BALANCE SHEET ARRANGEMENTS

The Company does not have any off-balance sheet arrangements such as guarantee contracts, contingent interests in assets transferred to unconsolidated entities, derivative financial obligations, or arrangements with respect to any obligations under a variable interest equity arrangement.

8. CONTINGENCY

On April 20, 2022, the Company entered a voting support and lock-up agreement ("VLA") with Ionic and Yourway Cannabis Brands Inc. ("Yourway"). The VLA is contingent on the execution of a plan of arrangement between Yourway and Ionic ("Plan of Arrangement") in which Yourway would acquire all Ionic issued and outstanding common shares and preferred shares. There is no expiry date for the Plan of Arrangement; however, it may be cancelled if Ionic and Yourway mutually consent or by either party if certain conditions are not met. As at November 30, 2022, the Plan of Arrangement had not been cancelled and had not been executed. Due to the contingent nature of the VLA, the Company has not reflected the impact of the VLA in these interim financial statements.

Pursuant to the VLA, the Company agreed to the following on the effective date of the Plan of Arrangement:

- convert 36,707,180 preferred shares to Ionic common shares resulting in the Company holding 57,229,991 Ionic common shares;
- convert 57,229,991 Ionic common shares to Yourway common shares at an exchange ratio of 0.0525 Yourway common shares for each Ionic common share resulting in the Company holding approximately 3,000,000 Yourway common shares;
- enter into an escrow agreement for the Yourway common shares held by the Company whereby the Yourway common shares will be released quarterly in 5 equal tranches commencing 12 months from the effective date of the Plan of Arrangement;
- accept 9,900,000 Ionic common share purchase warrants (the "Consideration Warrants") with each Consideration Warrant entitling the Company to acquire one Ionic common share at \$0.05 per Ionic common share for three years from the date of issuance in exchange for forgiveness of the dividend receivable; and
- convert the 4,000,000 Warrants and 9,900,000 Consideration Warrants, at an exchange ratio of 0.0525, into warrants exercisable into approximately 720,000 Yourway common shares at an exercise price of \$0.95

9. RELATED PARTY DISCLOSURES

Key management personnel compensation for the three months ended November 30, 2022 and 2021 were as follows:

	2022	2021
	\$	\$
Consulting fees	129,678	142,583
Directors' fees included in consulting fees	40,500	34,000
Professional fees	33,825	30,750
Share-based compensation	(38,487)	18,262
	165,516	225,595

For the three months ended November 30, 2022, included in consulting fees is \$30,172 (three months ended November 30, 2021 - \$87,389) in consulting fees charged by the former executive chairman as per an executive consulting agreement.

For the three months ended November 30, 2022, included in consulting fees is \$59,067 (three months ended November 30, 2021 - \$55,194) in consulting fees charged by the Chief Executive Officer and executive chairman as per an executive consulting agreement.

For the three months ended November 30, 2022, included in consulting fees is \$40,439 (three months ended November 30, 2021 - \$nil) in consulting fees charged by the Chief Science Officer as per an executive consulting agreement.

For the three months ended November 30, 2022, included in professional fees is \$33,825 (three months ended November 30, 2021 - \$30,750) in consulting fees charged by a Company related to the Chief Financial Officer.

Share-based compensation represents the expense recognized during the period for vesting of share purchase options, RSUs and DSUs. Share-based compensation was a recovery for the three months ended November 30, 2022 due to the reversal of expenses associated with unvested RSUs and DSUs which were cancelled pursuant to the mutual separation agreement with a former Director.

Due to related parties as at November 30, 2022 and August 31, 2022 were as follows:

	November 30, 2022	August 31, 2022
	\$	\$
Accounts payables and accrued liabilities	84,881	106,664
	84,881	106,664

As at November 30, 2022, included in accounts payable and accrued liabilities is \$14,241 (August 31, 2022 - \$27,561) payable to a Company owned by the Chief Executive Officer for consulting fees. The amount is unsecured, non-interest bearing and due on demand.

As at November 30, 2022, included in accounts payable and accrued liabilities is \$nil (August 31, 2022 - \$13,111) payable to a Company related to the Chief Science Officer for consulting fees. The amount is unsecured, non-interest bearing and due on demand.

As at November 30, 2022, included in accounts payable and accrued liabilities is \$14,538 (August 31, 2022 - \$10,763) payable to a Company related to the Chief Financial Officer for professional fees. The amount is unsecured, non-interest bearing and due on demand.

As at November 30, 2022, included in accounts payable and accrued liabilities is \$56,102 (August 31, 2022 - \$55,229) payable to directors for director fees. The amounts are unsecured, non-interest bearing and due on demand.

10. FINANCIAL INSTRUMENTS

IFRS 13 - *Fair Value Measurement* establishes a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities and the lowest priority to unobservable inputs.

The three levels of the fair value hierarchy are as follows:

- Level 1 - Unadjusted quoted prices in active markets for identical assets or liabilities;
- Level 2 - Inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly (i.e. as prices) or indirectly (i.e. from derived prices); and
- Level 3 - Inputs for the asset or liability that are not based on observable market data.

The fair value of cash is measured using Level 1 inputs. The carrying value of accounts payable and accrued liabilities approximate their respective fair values due to the short-term nature of these instruments.

The fair value of common shares, dividend receivable, promissory note receivable, Preferred Shares and Warrants is measured using Level 2 inputs and are measured at fair value through profit or loss. The valuation methodology and significant assumptions for the preferred shares is disclosed in note 6(a) of the interim financial statements and warrants is disclosed in note 7 of the interim financial statements.

11. OUTSTANDING SHARE DATA

As of the date of this MD&A, the Company's authorized share capital consists of an unlimited number of common shares without par value. The Company had the following securities outstanding as at January 27, 2023.

Type of Security	Number Outstanding
Common Shares	76,970,172
Share Purchase Options	3,098,981
Performance Warrants	776,000
Share Purchase Warrants	29,186,216
Restricted Share Units	375,000
Deferred Share Units	240,004
Fully Diluted	110,646,373

12. INTERNATIONAL FINANCIAL REPORTING STANDARDS

The consolidated financial statements have been prepared in accordance with IFRS as issued by the IASB, effective as of August 31, 2022. The accounting policies applied in the preparation of the consolidated financial statements are consistent with those applied and disclosed in note 3 to the annual financial statements.

13. CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS

The preparation of financial statements requires management to make judgments, estimates and assumptions that affect the application of policies and reported amounts of assets and liabilities, and income and expenses. Although management uses historical experience and its best knowledge of the amount, events, or actions to form the basis for judgments and estimates, actual results may differ from these estimates.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized in the period in which the estimate is revised if the revision affects only that period or in the period of the revision and further periods if the review affects both current and future periods. These financial statements do not include any accounts that require significant estimates as the basis for determining the stated amounts.

Critical judgments exercised in applying accounting policies that have the most significant effect on the amounts recognized in the financial statements are as the follows:

Functional currency

The functional currency for each of the Company's subsidiaries is the currency of the primary economic environment in which the respective entity operates. Such determination involves certain judgements to identify the primary economic environment in which the respective entity operates. The Company reconsiders the functional currency of its subsidiaries if there is a change in events and/or conditions which determine the primary economic environment.

Impairment

Long-lived assets, including intangible assets are reviewed for indicators of impairment at each statement of financial position date or whenever events or changes in circumstances indicate that the carrying amount of an asset exceeds its recoverable amount. Judgments and estimates are required in determining the indicators of impairment and the estimates required to measure an impairment, if any.

Valuation of investments

The Company's investments in common shares are measured at the quoted market price Ionic Brands Corp ("Ionic") common shares and adjusted for the qualitative factors as noted below.

The Company's investment in Preferred Shares is measured using the Black-Scholes option pricing model due to the vesting terms and lack of marketability at the current market price of Ionic common shares which the Preferred Shares can be converted into and adjusted for the qualitative factors as noted below. The Black-Scholes option pricing model utilizes subjective assumptions such as expected price volatility and expected life of the option. Changes in these input assumptions can significantly affect the fair value estimate.

In addition, the fair value measurement is adjusted for qualitative factors related to the significant uncertainty of the Company recovering the value of the preferred shares due to lack of marketability of the asset, deteriorating credit quality of Ionic, the VLA and the probability of the Plan of Arrangement completing as currently structured or without further significant delays. Currently, the common shares of Ionic have been suspended for trading.

Equity-settled share-based payments

Share-based payments are measured at fair value. Options and warrants are measured using the Black-Scholes option pricing model based on estimated fair values of all share-based awards at the measurement date and are expensed to the consolidated statement of loss and comprehensive loss over each award's vesting period. The Black-Scholes option pricing model utilizes subjective assumptions such as expected price volatility and expected life of the option. Changes in these input assumptions can significantly affect the fair value estimate.

Current and deferred income taxes

The Company's provision for income taxes is estimated based on the annual effective tax rates (and tax laws) that have been enacted or substantively enacted by the end of the reporting period. The current and deferred components of income taxes are estimated based on forecasted movements in temporary differences. Changes to the annual effective tax rate and differences between the actual and expected effective tax rate and between actual and forecasted movements in temporary differences will result in adjustments to the Company's provision for income taxes in the period changes are made and/or differences are identified.

In assessing the probability of realizing income tax assets recognized, management makes estimates related to expectations of future taxable income, applicable tax planning opportunities, expected timing of reversals of existing temporary differences and the likelihood that tax positions taken will be sustained upon examination by applicable tax authorities. In making its assessments, management gives additional weight to positive and negative evidence that can be objectively verified. Estimates of future taxable income are based on forecasted cash flows from operations and the application of existing tax laws in each jurisdiction. Forecasted cash flows from operations are based on contractual revenues and expenses and planned expenses, which are internally developed and reviewed by management.

Weight is attached to tax planning opportunities that are within the Company's control and are feasible and implementable without significant obstacles.

The likelihood that tax positions taken will be sustained upon examination by applicable tax authorities is assessed based on individual facts and circumstances of the relevant tax position evaluated in light of all available evidence.

14. RISKS AND UNCERTAINTIES

Any investment in the securities of the Company is speculative, due to the nature of its business and its general stage of development. These risk factors could materially affect the Company's future operating results and could cause actual events to differ materially from those described in forward looking statements relating to the Company. In addition to the usual risks associated with investment in a business, investors should carefully consider the following risk factors as well as the risk factors set out in the Company's other public disclosure.

The Company's business and results of operations are subject to a number of risks and uncertainties, including but not limited to the following:

Early Stage of the Industry and Product Development

Given the early stage of its prescription drug product development, the Company can make no assurance that its research and development programs will result in regulatory approval or commercially viable products. To achieve profitable operations, the Company, alone or with others, must successfully develop, gain regulatory approval for, and market its future products. The Company currently has no products that have been approved by Health Canada, the FDA, or any similar regulatory authority. To obtain regulatory approvals for its prescription drug product candidates being developed and to achieve commercial success, clinical trials must demonstrate that the prescription drug product candidates are safe for human use and that they demonstrate efficacy.

Many prescription drug product candidates never reach the stage of clinical testing and even those that do have only a small chance of successfully completing clinical development and gaining regulatory approval. Prescription drug product candidates can fail for a number of reasons, including, but not limited to, being unsafe for human use or due to the failure to provide therapeutic benefits equal to or better than the standard of treatment at the time of testing. Unsatisfactory results obtained from a particular study relating to a research and development program may cause the Company or its collaborators to abandon commitments to that program. Positive results of early preclinical research may not be indicative of the results that will be obtained in later stages of preclinical or clinical research. Similarly, positive results from early-stage clinical trials may not be indicative of favourable outcomes in later-stage clinical trials, and the Company can make no assurance that any future studies, if undertaken, will yield favourable results.

The early stage of the Company's product development makes it particularly uncertain whether any of its product development efforts will prove to be successful and meet applicable regulatory requirements, and whether any of its prescription drug product candidates will receive the requisite regulatory approvals, be capable of being manufactured at a reasonable cost or be successfully marketed. If the Company is successful in developing its current and future prescription drug product candidates into approved products, it will still experience many potential obstacles, which would affect its ability to successfully market and commercialize such approved products, such as the need to develop or obtain manufacturing, marketing and distribution capabilities, price pressures from third-party payors, or proposed changes in health care systems. If the Company is unable to successfully market and commercialize any of its products, its financial condition and results of operations may be materially and adversely affected.

The Company can make no assurance that any future studies, if undertaken, will yield favorable results. Many companies in the pharmaceutical and biotechnology industries have suffered significant setbacks in later-stage clinical trials after achieving positive results in early-stage development, and the Company cannot be certain that it will not face similar setbacks. These setbacks have been caused by, among other things, preclinical findings made while clinical trials were underway or safety or efficacy observations made in clinical trials, including previously unreported adverse events or latent defects in the manufactured drug product or the formulation or stability thereof. Moreover, preclinical and clinical data are often susceptible to varying interpretations and analyses, and many companies that believed their prescription drug product candidates performed satisfactorily in preclinical studies and clinical trials nonetheless failed to obtain Health Canada or FDA approval. If the Company fails to produce positive results in future clinical trials and other programs, the development timeline and regulatory approval and commercialization prospects for the Company's leading prescription drug product candidates, and, correspondingly, its business and financial prospects, would be materially adversely affected.

Preclinical testing and clinical trials for the Company's products may not achieve the desired results. The results of preclinical testing and clinical trials are uncertain. Product approvals are subject to a number of contingencies and may not be obtained in the time expected or at all. The Company's products may not attract a following among patients, retailers and/or providers. The Company expects to face an inherent risk of exposure to product liability claims, regulatory action and litigation if the products it plans to distribute are alleged to have caused loss or injury. There can be no assurance that the Company will be able to obtain or maintain product liability insurance on acceptable terms or with adequate coverage against potential liabilities.

The Company's business relies on its ability to access, develop, and sell psilocybin. Psilocybin is a controlled substance in many jurisdictions, including in Canada under Schedule III of the Controlled Drugs and Substances Act and in the United States. The Company may face difficulty accessing psilocybin and the public capital markets in Canada as a result of the response of regulators, stock exchanges, and other market participants to the Company's development and sale of a controlled substance. The Company may also have limited access to traditional banking services, as well as limited access to debt financing from traditional institutional lenders. The medical efficacy of psilocybin has not been confirmed and requires further study and scientific rigour.

Regulatory Risks and Uncertainties

In Canada, certain psychedelic drugs, including psilocybin, are classified as Schedule III drugs under the CDSA and as such, medical and recreational use is illegal under Canadian federal laws. In the United States, certain psychedelic drugs, including psilocybin and psilocin are classified as Schedule I drugs under the CSA and the Controlled Substances Import and Export Act and as such, medical and recreational use is illegal under the U.S. federal laws. Anyone wishing to conduct research on substances listed in Schedule I under the CSA must register with the DEA and obtain DEA approval of the research proposal.

There is no guarantee that psychedelic drugs or psychedelic inspired drugs will ever be approved as medicines in any jurisdiction in which the Company operates. All activities involving such substances by or on behalf of the Company are conducted in accordance with applicable federal, provincial, state and local laws. Further, all facilities engaged with such substances by or on behalf of the Company do so under current licences and permits issued by appropriate federal, provincial and local governmental agencies. While the Company is focused on programs using psychedelic inspired compounds, the Company does not have any direct or indirect involvement with the illegal selling, production or distribution of any substances in the jurisdictions in which it operates and does not intend to have any such involvement. However, the laws and regulations generally applicable to the industry in which the Company is involved in may change in ways currently unforeseen. Any amendment to or replacement of existing laws or regulations, including the classification or re-classification of the substances the Company is developing or working with, which are matters beyond the Company's control, may cause the Company's business, financial condition, results of operations and prospects to be adversely affected or may cause the Company to incur significant costs in complying with such changes or it may be unable to comply therewith. A violation of any applicable laws and regulations of the jurisdictions in which the Company operates could result in significant fines, penalties, administrative sanctions, convictions or settlements arising from civil proceedings initiated by either government entities in the jurisdictions in which the Company operates, or private citizens or criminal charges.

The loss of the necessary licences and permits for any of the above scheduled drugs could have an adverse effect on the Company's operations.

The psychedelic drug industry is a fairly new industry and the Company cannot predict the impact of the ever evolving compliance regime in respect of this industry. Similarly, the Company cannot predict the time required to secure all appropriate regulatory approvals for future products, or the extent of testing and documentation that may, from time to time, be required by governmental authorities. The impact of compliance regimes, any delays in obtaining, or failure to obtain regulatory approvals may significantly delay or impact the development of markets, its business and products, and sales initiatives and could have a material adverse effect on the business, financial condition and operating results of the Company.

The success of the Company's business is dependent on the reform of controlled substances laws pertaining to psilocybin. If controlled substances laws are not favourably reformed in Canada, the United States, and other global jurisdictions, the commercial opportunity that the Company is pursuing may be highly limited.

The Company makes no medical, treatment or health benefit claims about the Company's proposed products. The FDA, Health Canada, or other similar regulatory authorities have not evaluated claims regarding psilocybin, psilocybin analogues, or other psychedelic compounds. The efficacy of such products have not been confirmed by approved research. There is no assurance that the use of psilocybin, psilocybin analogues, or other psychedelic compounds can diagnose, treat, cure or prevent any disease or condition. Vigorous scientific research and clinical trials are needed. The Company has not conducted clinical trials for the use of its proposed products. Any references to quality, consistency, efficacy and safety of potential products do not imply that the Company verified such in clinical trials or that the Company will complete such trials. If the Company cannot obtain the approvals or research necessary to commercialize its business, it may have a material adverse effect on the Company's performance and operations.

No Assurance of Commercial Success

The successful commercialization of the Company's products will depend on many factors, including, the Company's ability to establish and maintain working partnerships with industry participants in order to market its products, the Company's ability to supply a sufficient amount of its products to meet market demand, and the number of competitors within each jurisdiction within which the Company may from time to time be engaged. There can be no assurance that the Company or its industry partners will be successful in their respective efforts to develop and implement, or assist the Company in developing and implementing, a commercialization strategy for the Company's products.

Reliance on Third Parties for Clinical Development Activities

The Company relies and will continue to rely on third parties to conduct a significant portion of its preclinical and clinical development activities. For example, clinical development activities include trial design, regulatory submissions, clinical patient recruitment, clinical trial monitoring, clinical data management and analysis, safety monitoring and project management. If there is any dispute or disruption in its relationship with third parties, or if it is unable to provide quality services in a timely manner and at a feasible cost, the Company's active development programs will face delays. Further, if any of these third parties fails to perform as the Company expects or if their work fails to meet regulatory requirements, the Company's testing could be delayed, cancelled or rendered ineffective.

Risks Related to Third Party Relationships

The Company intends to enter into strategic alliances with third parties that the Company believes will complement or augment its proposed business or will have a beneficial impact on the Company. Strategic alliances could present unforeseen integration obstacles or costs, may not enhance the Company's business, and may involve risks that could adversely affect the Company, including significant amounts of management time that may be diverted from operations in order to pursue and complete such transactions or maintain such strategic alliances. Future strategic alliances could result in the incurrence of additional debt, costs and contingent liabilities, and there can be no assurance that future strategic alliances will achieve, or that the Company's existing strategic alliances will continue to achieve, the expected benefits to the Company's business or that the Company will be able to consummate future strategic alliances on satisfactory terms, or at all. Any of the foregoing could have a material adverse effect on the Company's business, financial condition and results of operations.

In addition to the foregoing, the success of the Company's business will depend, in large part, on the Company's ability to enter into, and maintain collaborative arrangements with various participants in the psychedelic pharmaceutical industry. There can be no assurance that the Company will be able to enter into collaborative arrangements in the future on acceptable terms, if at all. There can be no assurance that such arrangements will be successful, that the parties with which the Company has or may establish arrangements will adequately or successfully perform their obligations under such arrangements, that potential partners will not compete with the Company by seeking or prioritizing alternate, competitor products. The termination or cancellation of any such collaborative arrangement or the failure of the Company and/or the other parties to these arrangements to fulfill their obligations could have a material adverse effect on the Company's business, financial condition and results of operations. In addition, disagreements between the Company and any of its industry partners could lead to delays or time consuming and expensive legal proceedings, which could have a material adverse effect on the Company's business, financial condition and results of operations.

Reliance on Contract Manufacturers

The Company has limited manufacturing experience and relies on contract manufacturing organizations ("CMOs") to manufacture its prescription drug product candidates for preclinical studies and clinical trials. The Company relies on CMOs for manufacturing, filling, packaging, storing and shipping of drug product in compliance with cGMP regulations applicable to its products. All applicable jurisdictions, including Health Canada, and the FDA, ensure the quality of food, drug products and dietary supplements by carefully monitoring drug manufacturers' compliance with cGMP regulations. The cGMP regulations for drugs contain minimum requirements for the methods, facilities and controls used in manufacturing, processing and packing of a drug product. There can be no assurances that CMOs will be able to meet the Company's timetable and requirements. The Company has not contracted with alternate suppliers for drug substance production in the event that the current provider is unable to scale up production, or if it otherwise experiences any other significant problems. If the Company is unable to arrange for alternative thirdparty manufacturing sources on commercially reasonable terms or in a timely manner, the Company may be delayed in the development of its prescription drug product candidates. Further, CMOs must operate in compliance with cGMP and ensure that their appropriate permits and licences remain in good standing and failure to do so could result in, among other things, the disruption of product supplies. The Company's dependence upon third parties for the manufacture of its products may adversely affect its profit margins and its ability to develop and deliver products on a timely and competitive basis.

Safety and Efficacy of Products

Before obtaining marketing approval from regulatory authorities for the sale of the Company's prescription drug product candidates, the Company must conduct preclinical studies in animals and extensive clinical trials in humans to demonstrate the safety and efficacy of the prescription drug product candidates. Clinical testing is expensive and difficult to design and implement, can take many years to complete and has uncertain outcomes. The outcome of preclinical studies and early clinical trials may not predict the success of later clinical trials, and interim results of a clinical trial do not necessarily predict final results. A number of companies in the pharmaceutical and biotechnology industries have suffered significant setbacks in advanced clinical trials due to lack of efficacy or unacceptable safety profiles, notwithstanding promising results in earlier trials. The Company does not

know whether the clinical trials it may conduct will demonstrate adequate efficacy and safety to result in regulatory approval to market any of its prescription drug product candidates in any jurisdiction. A prescription drug product candidate may fail for safety or efficacy reasons at any stage of the testing process. A major risk the Company faces is the possibility that none of its prescription drug product candidates under development will successfully gain market approval from Health Canada, the FDA, or other regulatory authorities, resulting in the Company being unable to derive any commercial revenue from them after investing significant amounts of capital in their development.

Clinical trials are conducted in representative samples of the potential patient population which may have significant variability. Clinical trials are by design based on a limited number of subjects and of limited duration for exposure to the product used to determine whether, on a potentially statistically significant basis, the planned safety and efficacy of any such product can be achieved. As with the results of any statistical sampling, the Company cannot be sure that all side effects of its products may be uncovered, and it may be the case that only with a significantly larger number of patients exposed to such product for a longer duration, may a more complete safety profile be identified. Further, even larger clinical trials may not identify rare serious adverse effects, or the duration of such studies may not be sufficient to identify when those events may occur. There have been products that have been approved by the regulatory authorities but for which safety concerns have been uncovered following approval. Such safety concerns have led to labelling changes or withdrawal of such products from the market, and the Company's products may be subject to similar risks. The Company might have to withdraw or recall its products from the marketplace. The Company may also experience a significant drop in the potential future sales of its products if and when regulatory approvals for such products are obtained, experience harm to its reputation in the marketplace or become subject to lawsuits, including class actions. Any of these results could decrease or prevent any sales of the Company's products, or substantially increase the costs and expenses of commercializing and marketing its products.

Clinical Testing and Commercializing Products

Before obtaining marketing approval from regulatory authorities for the sale of the Company's prescription drug product candidates, it must conduct preclinical studies in animals and extensive clinical trials in humans to demonstrate the safety and efficacy of the prescription drug product candidates. Clinical testing is expensive and difficult to design and implement, can take many years to complete and has uncertain outcomes. The outcome of preclinical studies and early clinical trials may not predict the success of later clinical trials, and interim results of a clinical trial do not necessarily predict final results. A number of companies in the pharmaceutical and biotechnology industries have suffered significant setbacks in advanced clinical trials due to lack of efficacy or unacceptable safety profiles, notwithstanding promising results in earlier trials. The Company does not know whether the clinical trials it may conduct will demonstrate adequate efficacy and safety to result in regulatory approval to market any of its prescription drug product candidates in any jurisdiction. A prescription drug product candidate may fail for safety or efficacy reasons at any stage of the testing process. A major risk the Company faces is the possibility that none of its prescription drug product candidates under development will successfully gain market approval from the FDA, or other regulatory authorities, resulting in the Company being unable to derive any commercial revenue from this business segment after investing significant amounts of capital in its development.

The Company cannot predict whether any clinical trials will begin as planned, will need to be restructured, or will be completed on schedule, or at all. The Company's product development costs will increase if it experiences delays in clinical testing. Significant clinical trial delays could shorten any periods during which the Company may have the 48 exclusive right to commercialize its prescription drug product candidates or allow its competitors to bring products to market before the Company, which would impair the Company's ability to successfully commercialize its prescription drug product candidates and may harm its financial condition, results of operations and prospects. The commencement and completion of clinical trials for the Company's prescription drug product candidates may be delayed for a number of reasons, including but not limited, to:

- failure by regulatory authorities to grant permission to proceed or placing clinical trials on hold;
- suspension or termination of clinical trials by regulators for many reasons, including concerns about patient safety or failure of the Company's CMOs to comply with cGMP requirements or latent defects in product quality;
- any changes to the Company's manufacturing process that may be necessary or desired, delays or failure to obtain clinical supply from CMOs of the Company's products necessary to conduct clinical trials;
- prescription drug product candidates demonstrating a lack of safety or efficacy during clinical trials, reports of clinical testing on similar technologies and products raising safety or efficacy concerns;
- clinical investigators not performing the Company's clinical trials on their anticipated schedule, dropping out of a trial, or employing methods not consistent with the clinical trial protocol, regulatory requirements or other third parties not performing data collection and analysis in a timely or accurate manner;

- failure of the Company's contract research organizations to satisfy their contractual duties or meet expected deadlines;
- inspections of clinical trial sites by regulatory authorities;
- regulatory authorities or ethics committees finding regulatory violations that require the Company to undertake corrective action, resulting in suspension or termination of one or more sites or the imposition of a clinical hold on the entire study;
- one or more regulatory authorities or ethics committees rejecting, suspending or terminating the study at an investigational site, precluding enrollment of additional subjects, or withdrawing its approval of the trial; or
- failure to reach agreement on acceptable terms with prospective clinical trial sites.

The Company's product development costs will increase if it experiences delays in testing or approval or if the Company needs to perform more or larger clinical trials than planned. Additionally, changes in regulatory requirements and policies may occur, and the Company may need to amend study protocols to reflect these changes. Amendments may require the Company to resubmit its study protocols to regulatory authorities or ethics committees for re-examination, which may impact the cost, timing or successful completion of that trial. Delays or increased product development costs may have a material adverse effect on the Company's business, financial condition and prospects.

Prior to commencing clinical trials in Canada, the United States, or other jurisdictions, for any prescription drug product candidates developed by the Company, it may be required to have an IND (or equivalent) for each prescription drug product candidate and to file additional INDs prior to initiating any additional clinical trials. The Company believes that the data from its studies will support the filing of additional INDs to enable the Company to undertake additional clinical studies as it has planned. However, submission of an IND (or equivalent) may not result in the FDA (or equivalent authorities) allowing further clinical trials to begin and, once begun, issues may arise that will require the Company to suspend or terminate such clinical trials.

Additionally, even if relevant regulatory authorities agree with the design and implementation of the clinical trials set forth in an IND, these regulatory authorities may change their requirements in the future. Failure to submit or have effective INDs (or equivalent) and commence or continue clinical programs will significantly limit its opportunity to generate revenue.

Completion of Clinical Trials

As the Company's prescription drug product candidates advance from preclinical testing to clinical testing, and then through progressively larger and more complex clinical trials, the Company will need to enroll an increasing number of patients that meet its eligibility criteria. There is significant competition for recruiting patients in clinical trials, and the Company may be unable to enroll the patients it needs to complete clinical trials on a timely basis or at all. The factors that affect the Company's ability to enroll patients are largely uncontrollable and include, but are not limited to, the size and nature of the patient population, eligibility and exclusion criteria for the trial, design of the clinical 49 trial, competition with other companies for clinical sites or patients, perceived risks and benefits of the prescription drug product candidate, and the number, availability, location and accessibility of clinical trial sites.

Commercial Grade Product Manufacturing

The Company's prescription drug products will be manufactured in small quantities for preclinical studies and clinical trials by third party manufacturers. In order to commercialize its product, the Company needs to manufacture commercial quality drug supply for use in registration clinical trials. Most, if not all, of the clinical material used in phase III/pivotal/registration studies must be derived from the defined commercial process including scale, manufacturing site, process controls and batch size. If the Company has not scaled up and validated the commercial production of its product prior to the commencement of pivotal clinical trials, it may have to employ a bridging strategy during the trial to demonstrate equivalency of early-stage material to commercial drug product, or potentially delay the initiation or completion of the trial until drug supply is available. The manufacturing of commercial quality product may have long lead times, may be very expensive and requires significant efforts including, but not limited to, scale-up of production to anticipated commercial scale, process characterization and validation, analytical method validation, identification of critical process parameters and product quality attributes, and multiple process performance and validation runs. If the Company does not have commercial drug supply available when needed for pivotal clinical trials, the Company's regulatory and commercial progress may be delayed, and it may incur increased product development costs. This may have a material adverse effect on the Company's business, financial condition and prospects, and may delay marketing of the product.

Nature of Regulatory Approvals

The Company's development and commercialization activities and prescription drug product candidates are significantly regulated by a number of governmental entities, including Health Canada, and the FDA. Regulatory approvals are required prior to each clinical trial and the Company may fail to obtain the necessary approvals to commence or continue clinical testing. The Company must comply with regulations concerning the manufacture, testing, safety, effectiveness, labeling, documentation, advertising, and sale of products and prescription drug product candidates and ultimately must obtain regulatory approval before it can commercialize a prescription drug product candidate. The time required to obtain approval by such regulatory authorities is unpredictable but typically takes many years following the commencement of preclinical studies and clinical trials. Any analysis of data from clinical activities the Company performs is subject to confirmation and interpretation by regulatory authorities, which could delay, limit or prevent regulatory approval. Even if the Company believes results from its sponsored clinical trials are favorable to support the marketing of its prescription drug product candidates, Health Canada, the FDA, or other regulatory authorities may disagree. In addition, approval policies, regulations, or the type and amount of clinical data necessary to gain approval may change during the course of a prescription drug product candidate's clinical development and may vary among jurisdictions.

The Company has not obtained regulatory approval for any prescription drug product candidate and it is possible that none of its existing prescription drug product candidates or any future prescription drug product candidates will ever obtain regulatory approval. The Company could fail to receive regulatory approval for its prescription drug product candidates for many reasons, including, but not limited to failure to demonstrate that a prescription drug product candidate is safe and effective for its proposed indication, failure of clinical trials to meet the level of statistical significance required for approval, failure to demonstrate that a prescription drug product candidate's clinical and other benefits outweigh its safety risks, or deficiencies in the manufacturing processes or the failure of facilities of CMOs with whom the Company contracts for clinical and commercial supplies to pass a pre-approval inspection.

A regulatory authority may require more information, including additional preclinical or clinical data to support approval, which may delay or prevent approval and the Company's commercialization plans, or the Company may decide to abandon the development program. If the Company were to obtain approval, regulatory authorities may approve any of its prescription drug product candidates for fewer or more limited indications than the Company request, may grant approval contingent on the performance of costly post-marketing clinical trials, or may approve a prescription drug product candidate with a label that does not include the labeling claims necessary or desirable for the successful commercialization of that prescription drug product candidate. Moreover, depending on any safety issues associated with the Company's prescription drug product candidates that garner approval, Health Canada, the FDA, or other regulatory authorities may impose a risk evaluation and mitigation strategy, thereby imposing certain restrictions on the sale and marketability of such products.

If there are changes in the application of legislation, regulations or regulatory policies, or if problems are discovered with the Company products, or if one of its distributors, licensees or co-marketers fails to comply with regulatory requirements, the regulators could take various actions. These include imposing fines on the Company, imposing restrictions on the Company's products or its manufacture and requiring the Company to recall or remove its products from the market. The regulators could also suspend or withdraw the Company's Co-marketing authorizations, requiring it to conduct additional clinical trials, change its labeling or submit additional applications for marketing authorization. If any of these events occurs, the Company's ability to sell its products may be impaired, and it may incur substantial additional expense to comply with regulatory requirements, which could materially adversely affect its business, financial condition and results of operations.

Product Viability

If the Company's psychedelic pharmaceutical products are not perceived to have the effects intended by the end user, the Company's business may suffer. In general, psychedelic pharmaceutical products have minimal long-term data with respect to efficacy, unknown side effects and/or interaction with individual human biochemistry or other supplements or medications. As a result, the Company's psychedelic pharmaceutical products could have certain side effects if not used as directed or if taken by an end user that has certain known or unknown medical conditions.

Limited operating history

The Company is subject to many risks common to early-stage enterprises, including under-capitalization, cash shortages, limitations with respect to personnel, financial and other resources, history of losses and lack of substantial revenues. There is no assurance that the Company will be successful in achieving a return on shareholders' investment and the likelihood of success must be considered in light of its relatively early stage of operations. Because the Company has a relatively limited operating history in emerging area of business, you should consider and evaluate its operating prospects in light of the risks and uncertainties frequently encountered by early-stage companies in rapidly evolving markets.

These risks may include:

- risks that it may not have sufficient capital to achieve its growth strategy;
- risks that it may not develop its product and service offerings in a manner that enables it to be profitable and meet its customers' requirements;
- risks that its growth strategy may not be successful;
- risks that fluctuations in its operating results will be significant relative to its revenues; and
- risks relating to an evolving regulatory regime.

Historically the Company has financed its operations through equity financing. While the Company generates revenues, these revenues may not be sufficient to support future operations or plans for business development. There is no assurance that the Company will be able to maintain the current level of revenue or access further equity. Due to the fact the Company operates a cannabis-related business certain financing options may not be available to the Company. If the Company is unable to sustain or grow its revenue and not be able to attract further equity financing, the Company may not be able to pay liabilities as they become due and thereby would suffer significant financial damage.

The Company's future growth will depend substantially on its ability to address these and the other risks described in this section. If it does not successfully address these risks, its business may be significantly harmed.

There is no assurance that the Company will turn a profit

There is no assurance as to whether the Company will be profitable or pay dividends. The Company has incurred and anticipates that it will continue to incur substantial expenses relating to the development and initial operations of its business. The payment and amount of any future dividends will depend upon, among other things, the results of operations, cash flow, financial condition, and operating and capital requirements. There is no assurance that future dividends will be paid, and, if dividends are paid, there is no assurance with respect to the amount of any such dividends. In the event that any of the Company's investments, or any proceeds thereof, any dividends or distributions therefrom, or any profits or revenues accruing from such investments in the United States were found to be in violation of money laundering legislation or otherwise, such transactions may be viewed as proceeds of crime under one or more of the statutes noted above or any other applicable legislation. This could restrict or otherwise jeopardize the ability of the Company to declare or pay dividends, effect other distributions or subsequently repatriate such funds back to Canada.

The Company may not be able to effectively manage its growth and operations, which could materially and adversely affect its business.

If the Company implements its business plan as intended, it may in the future experience rapid growth and development in a relatively short period of time.

The management of this growth will require, among other things, continued development of financial and management controls, stringent control of costs, the ability to attract and retain qualified management personnel and the training of new personnel. The Company intends to utilize outsourced resources, and hire additional personnel, to manage its expected growth and expansion. Failure to successfully manage its possible growth and development could have a material adverse effect on the Company's business and the value of the Company's common shares.

The Company may be unable to adequately protect its proprietary and intellectual property rights, particularly in the U.S.

The Company's ability to compete may depend on the superiority, uniqueness and value of any intellectual property and technology that it may develop. To the extent the Company is able to do so, to protect any proprietary rights, the Company intends to rely on a combination of patent, trademark, copyright and trade secret laws, confidentiality agreements with its employees and third parties, and protective contractual provisions. Despite these efforts, any of the following occurrences may reduce the value of any of the Company's intellectual property:

- (1) the market for the Company's products and services may depend to a significant extent upon the goodwill associated with its trademarks and trade names, and its ability to register certain of its intellectual property under U.S. federal and state law is impaired by the illegality of cannabis under U.S. federal law;
- (2) patents in the cannabis industry involve complex legal and scientific questions and patent protection may not be available for some or any products; the Company's applications for trademarks and copyrights relating to its business may not be granted and, if granted, may be challenged or invalidated;

- (3) issued patents, trademarks and registered copyrights may not provide the Company with competitive advantages; the Company's efforts to protect its intellectual property rights may not be effective in preventing misappropriation of any its products or intellectual property;
- (4) The Company's efforts may not prevent the development and design by others of products or marketing strategies similar to or competitive with, or superior to those the Company develops;
- (5) another party may assert a blocking patent and the Company would need to either obtain a license or design around the patent in order to continue to offer the contested feature or service in its products; or
- (6) the expiration of patent or other intellectual property protections for any assets owned by the Company could result in significant competition, potentially at any time and without notice, resulting in a significant reduction in sales. The effect of the loss of these protections on the Company and its financial results will depend, among other things, upon the nature of the market and the position of the Issuer's products in the market from time to time, the growth of the market, the complexities and economics of manufacturing a competitive product and regulatory approval requirements but the impact could be material and adverse.

The Company may be forced to litigate to defend its intellectual property rights, or to defend against claims by third parties against the Company relating to intellectual property rights.

The Company may be forced to litigate to enforce or defend its intellectual property rights, to protect its trade secrets or to determine the validity and scope of other parties' proprietary rights. Any such litigation could be very costly and could distract its management from focusing on operating the business. The existence and/or outcome of any such litigation could harm the business.

Further, because the content of much of the Company's intellectual property concerns cannabis and other activities that are not legal in some state jurisdictions or under federal law, the Company may face additional difficulties in defending its intellectual property rights.

The Company may become subject to litigation, including for possible product liability claims, which may have a material adverse effect on the Company's reputation, business, results from operations, and financial condition.

The Company may be named as a defendant in a lawsuit or regulatory action. The Company may also incur uninsured losses for liabilities which arise in the ordinary course of business, or which are unforeseen, including, but not limited to, employment liability and business loss claims. Any such losses could have a material adverse effect on the Company's business, results of operations, sales, cash flow or financial condition.

The Company faces competition from other companies where it will conduct business that may have higher capitalization, more experienced management or may be more mature as a business.

An increase in the companies competing in this industry could limit the ability of the Company to expand its operations. Current and new competitors may have better capitalization, a longer operating history, more expertise and able to develop higher quality equipment or products, at the same or a lower cost. The Company cannot provide assurances that it will be able to compete successfully against current and future competitors. Competitive pressures faced by the Company could have a material adverse effect on its business, operating results and financial condition.

If the Company is unable to attract and retain key personnel, it may not be able to compete effectively in the cannabis market.

The Company's success has depended and continues to depend upon its ability to attract and retain key management, including its Chief Executive Officer. The Company will attempt to enhance its management and technical expertise by continuing to recruit qualified individuals who possess desired skills and experience in certain targeted areas. The Company's inability to retain employees and attract and retain sufficient additional employees could have a material adverse effect on its business, results of operations, sales, cash flow or financial condition. Shortages in qualified personnel or the loss of key personnel could adversely affect the financial condition of the Company and results of operations of the business. The loss of any of the Company's senior management could materially adversely affect its ability to execute its business plan and strategy, and the Company may not be able to find adequate replacements on a timely basis, or at all.

Failure to successfully integrate acquired businesses, its products and other assets into the Company, or if integrated, failure to further the business strategy, may result in the Company's inability to realize any benefit from such acquisition

The Company expects to grow by acquiring businesses. The consummation and integration of any acquired business, product or other assets into the Company may be complex and time consuming and, if such businesses and assets are not successfully integrated, the Company may not achieve the anticipated benefits, cost-savings or growth opportunities. Furthermore, these acquisitions and other arrangements, even if successfully integrated, may fail to further the Company's business strategy as anticipated, expose the Company to increased competition or other challenges with respect to the Company's products or geographic markets, and expose the Company to additional liabilities associated with an acquired business, technology or other asset or arrangement.

Future offerings and dilution

If additional funds are raised through issuances of equity or convertible debt securities, existing shareholders could suffer significant dilution. The Company's articles permit the issuance of an unlimited number of common shares, and shareholders will have no pre-emptive rights in connection with such further issuance. The directors of the Company have discretion to determine the price and the terms of issue of further issuances. Moreover, additional common shares will be issued on the exercise of options under the Option Plan and upon the exercise of outstanding Warrants. In addition, from time to time, the Company may enter into transactions to acquire assets or the shares of other companies. These transactions may be financed wholly or partially with debt, which may temporarily increase the Company's debt levels above industry standards. Any debt financing secured in the future could involve restrictive covenants relating to capital raising activities and other financial and operational matters, which may make it more difficult for the Company to obtain additional capital and to pursue business opportunities, including potential acquisitions. The Company may require additional financing to fund its operations to the point where it is generating positive cash flows. Negative cash flow may restrict the Company's ability to pursue its business objectives.

The Company continues to sell shares for cash to fund operations, capital expansion, mergers and acquisitions that will dilute the current shareholders.

The Company could be liable for fraudulent or illegal activity by its contractors and consultants resulting in significant financial losses to claims against the Company

The Company is exposed to the risk that its independent contractors and consultants may engage in fraudulent or other illegal activity. Misconduct by these parties could include intentional, reckless and/or negligent conduct or disclosure of unauthorized activities to the Company that violate government regulations. It is not always possible for the Company to identify and deter misconduct by its contractors and consultants and other third parties, and the precautions taken by the Company to detect and prevent this activity may not be effective in controlling unknown or unmanaged risks or

losses or in protecting the Company from governmental investigations or other actions or lawsuits stemming from a failure to be in compliance with such laws or regulations. If any such actions are instituted against the Company, and it is not successful in defending itself or asserting its rights, those actions could have a significant impact on its business, including the imposition of civil, criminal and administrative penalties, damages, monetary fines, contractual damages, reputational harm, diminished profits and future earnings, and curtailment of the Company's operations, any of which could have a material adverse effect on its business, financial condition and results of operations.

The Company's officers and directors may be engaged in a range of business activities resulting in conflicts of interest

Although certain officers and board members of the Company are bound by anti-circumvention agreements limiting their ability to enter into competing and/or conflicting ventures or businesses, the Company may be subject to various potential conflicts of interest because some of its officers and directors may be engaged in a range of business activities. In addition, Company's executive officers and directors may devote time to their outside business interests, so long as such activities do not materially or adversely interfere with their duties to the Company. In some cases, the Company's executive officers and directors may have fiduciary obligations associated with these business interests that interfere with their ability to devote time to the Company's business and affairs and that could adversely affect the Company's operations. These business interests could require significant time and attention of the Company's executive officers and directors.

In addition, the Company may also become involved in other transactions which conflict with the interests of its directors and the officers who may from time to time deal with persons, firms, institutions or companies with which the Company may be dealing, or which may be seeking investments similar to those desired by it. The interests of these persons could conflict with those of the Company. In addition, from time to time, these persons may be competing with the Company for available investment opportunities. Conflicts of interest, if any, will be subject to the procedures and remedies provided under applicable laws. In

particular, if such a conflict of interest arises at a meeting of the Company's directors, a director who has such a conflict will abstain from voting for or against the approval of such participation or such terms. In accordance with applicable laws, the directors of the Company are required to act honestly, in good faith and in the best interests of the Company.

The Company's contracts may not be legally enforceable in the U.S.

Because the Company's contracts involve cannabis and other activities that are not legal under U.S. federal law and in some jurisdictions, the Company may face difficulties in enforcing its contracts in U.S. federal and certain state courts.

The market price for the Company's common shares may be volatile and subject to wide fluctuations in response to numerous factors, many of which are beyond the Company's control.

The market price for the Company's common shares may be volatile and subject to wide fluctuations in response to numerous factors, many of which are beyond the Company's control, including the following:

- (1) actual or anticipated fluctuations in the Company's quarterly results of operations;
- (2) recommendations by securities research analysts;
- (3) changes in the economic performance or market valuations of companies in the industry in which the Company operates;
- (4) addition or departure of the Company's executive officers and other key personnel;
- (5) release or expiration of lock-up or other transfer restrictions on outstanding Company common shares;
- (6) sales or perceived sales of additional Company common shares;
- (7) significant acquisitions or business combinations, strategic partnerships, joint ventures or capital commitments by or involving us or the Company's competitors;
- (8) operating and share price performance of other companies that investors deem comparable to the Company; fluctuations to the costs of vital production materials and services;
- (9) changes in global financial markets and global economies and general market conditions, such as interest rates;
- (10) operating and share price performance of other companies that investors deem comparable to the Company or from a lack of market comparable companies;
- (11) news reports relating to trends, concerns, technological or competitive developments, regulatory changes and other related issues in the Company's industry or target markets; and
- (12) regulatory changes in the cannabis industry.

Financial markets have recently experienced significant price and volume fluctuations that have particularly affected the market prices of equity securities of companies and that have often been unrelated to the operating performance, underlying asset values or prospects of such companies. Accordingly, the market price of the Company's common shares may decline even if the Company's operating results, underlying asset values or prospects have not changed. Additionally, these factors, as well as other related factors, may cause decreases in asset values that are deemed to be other than temporary, which might result in impairment losses. There can be no assurance that continuing fluctuations in price and volume will not occur. If such increased levels of volatility and market turmoil continue, the Company's operations could be adversely affected and the trading price of the Company's common shares might be materially adversely affected.

Currency fluctuations

The Company's revenues and expenses are expected to be primarily denominated in U.S. dollars, and therefore may be exposed to significant currency exchange fluctuations. Recent events in the global financial markets have been coupled with increased volatility in the currency markets. Fluctuations in the exchange rate between the U.S. dollar and the Canadian dollar may have a material adverse effect on the Company's business, financial condition and operating results. The Company may, in the future, establish a program to hedge a portion of its foreign currency exposure with the objective of minimizing the impact of adverse foreign currency exchange movements. However, even if the Company develops a hedging program, there can be no assurance that it will effectively mitigate currency risks.

Achieving Publicly Announced Milestones

From time to time, the Company may announce the timing of certain events it expects to occur, such as the anticipated timing of results from clinical trials. These statements are forward-looking and are based on the best estimates of management at the time relating to the occurrence of such events. However, the actual timing of such events may differ from what has been publicly disclosed. The timing of events such as initiation or completion of a clinical trial, filing of an application to obtain regulatory approval, or announcement of additional clinical trials may ultimately vary from what is publicly disclosed. See "Commercial Grade Product Manufacturing", "Safety and Efficacy of Products", "Clinical Testing and Commercializing Products", "Completion of Clinical Trials", and "Nature of Regulatory Approvals" as discussed under this heading "Risk Factors" for further disclosure of

risks and events that may affect the timing of certain events the Company may announce. The Company undertakes no obligation to update or revise any forward-looking information or statements, whether as a result of new information, future events or otherwise, except as otherwise required by-law. Any variation in the timing of previously announced milestones could have a material adverse effect on the Company's business plan, financial condition or operating results and the trading price of its common shares.
