

## **Bee Vectoring Technologies to Appear on Discovery Network's Daily Planet TV Show**

**MISSISSAUGA, ON – MAY 17, 2016 – Bee Vectoring Technologies International Inc.** (the “Company” or “BVT”) (TSXV: BEE) announces that it will appear on Discovery Network’s flagship science news show, Daily Planet, today, May 17<sup>th</sup>, at 7pm Eastern Time.

The show is expected to include interviews with members of the BVT executive team and take an in depth look at the work BVT is doing with international fruit growers with its patented crop protection system utilizing commercially reared bumblebees as delivery mechanisms for organic inoculants.

### **About [Bee Vectoring Technologies International Inc.](#)**

BVT has developed and owns patented and pending bee vectoring technology (consisting of a proprietary tray dispenser containing a unique carrier agent) that is designed to harmlessly utilize commercially reared bumblebees as natural delivery mechanisms for a variety of powdered mixtures comprised of organic compounds that inhibit or eliminate common crop diseases, while at the same time stimulating and enhancing the same crops. This unique and proprietary process facilitates a targeted delivery of crop controls using the simple process of bee pollination to replace traditional crop spraying, resulting in better yield, organic product and less impact on the environment without the use of water or disruptions to labour.
