### **Product Highlights**

Frying Oils Recovery: Extensive testing indicates that the Beyond Oil Product extends the usable life of frying oil, improves product quality, and reduces frying oil costs. As a preferential adsorbent, the product reduces and prevents the formation of harmful components such as free fatty acids (“**FFA**”), total polar materials

("TPM"), acrylamide, polycyclic aromatic hydrocarbons ("PAHs"), trans fats, and other impurities, ensuring frying oil stays fresh and fried food tastes fantastic.

One-of-a-Kind: Beyond Oil has developed a unique solution that can absorb the FFAs and TPMs generated in frying oil, together with other harmful components and undesired off-flavors, colors, and odors.

Patent Protected: The Company also has a portfolio of registered and patent-pending solutions that extend the shelf-life of produced and used vegetable oils.

Potential Cost-Savings: One of Beyond Oil's unique value propositions is that it can dramatically lower costs for quick-service restaurants by significantly extending the useful life of the oil while meeting food quality and safety requirements. For more information on how the Beyond Oil Product extends the life of frying oil, see the Company's news release dated December 12, 2022.

Distribution Ready: The Company received a non-objection letter from the US Food & Drug Administration ("FDA") in March 2022, on the basis that all the Beyond Oil Product ingredients meet food-grade specifications of the FDA. In May 2022, Beyond Oil received a non-objection letter from Health Canada and a National Sanitation Foundation certification. Beyond Oil is legally permitted to sell its product into the Israeli market according to the processing-aid and filtering-aid regulations.

### **How the Beyond Oil Product Works**

The Beyond Oil Product integrates into the existing filtration systems of both commercial and industrial fryers. The combination of active filtration by the powder and passive filtration by the filter and filtration machine ensures the best results by removing other degradation particles. The powder remains on the filter and creates an additional layer which provides the microfiltration benefit.
