MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

This Management's Discussion and Analysis ("MD&A") of Meryllion Resources Corp. should be read in conjunction with the Company's condensed interim consolidated financial statements and related notes for the three months ended December 31, 2015. The Company's condensed interim consolidated financial statements for the three months ended December 31, 2015 have been prepared in accordance with International Accounting Standard ("IAS") 34, 'Interim Financial Reporting'. This MD&A should also be read in conjunction with the Company's audited consolidated financial statements and related notes for the twelve months ended September 30, 2015, prepared under International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB"). All dollar amounts included therein and in this MD&A are expressed in Canadian Dollars unless otherwise noted. The information contained within this MD&A is current to February 25, 2016.

1. OVERVIEW

Meryllion Resources Corp. was incorporated on July 25, 2013 under the laws of British Columbia, Canada. Meryllion Resources Corp. together with its subsidiaries (collectively known as "Meryllion" or the "Company") is a natural resource company, at the exploration stage, engaged in the acquisition and exploration of resource properties in South America with its focus on the advancement of its Samenta Project in Argentina. The Company's shares trade on the Canadian Securities Exchange ("CSE") under the symbol MYR.

Additional disclosures pertaining to the Company's filings, technical reports, press releases and other information are available on SEDAR at www.sedar.com.

2. BACKGROUND

On July 25, 2013, Kaizen Discovery Inc. formerly Concordia Resource Corp. ("Concordia"), incorporated a wholly-owned subsidiary Meryllion Resources Corp. (the subsidiary of Concordia is referred to as "MRC") under the Business Corporations Act of British Columbia. In October 2013, Concordia and MRC entered into a vend-in agreement (the "Vend-In Agreement"), whereby MRC issued 17,125,510 common shares to Concordia in exchange for approximately \$4,700,000 in cash, subject to closing adjustments, and Concordia's 100% interest in Meryllion Minerals Corporation ("MMC"). The Vend-In Agreement resulted in MRC controlling a 100% interest in MMC and Concordia's indirect interest in the Providencia and Cerro Amarillo Projects and the related assets in Meryllion Argentina SA ("MAS"), a wholly-owned subsidiary of MMC (together called the "Argentine Assets").

On December 4, 2013, Concordia completed a Plan of Arrangement (the "Arrangement") under the Business Corporations Act of British Columbia whereby it distributed 100% of its interest in MRC to its shareholders. Concurrently with the completion of the Arrangement, Meryllion obtained approval to list its common shares on the TSX-V and began trading under the ticker symbol MYR on December 6, 2013. The net cash received by the Company after closing adjustments was \$4,527,006.

Management cautions readers that the allocation of historic expenses may not be indicative of the actual expenses that would have been incurred, and do not reflect the Company's consolidated results of operations, financial position and cash flows, had the Company been operating as a separate, stand-alone public company for the periods presented.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

3. CORPORATE ACTIVITY

On December 1, 2014, the Company announced that during the congressional deliberations that took place in November 2014, it was determined that any decision regarding the ratification of the Cerro Amarillo *Declaración de Impacto Ambiental* ("DIA") would be delayed pending the completion of an inventory of glaciers in or near the project to be conducted by *Instituto Argentino de Nivología Glaciología y Ciencias Ambientales* ("IANIGLA"), the federal body charged with conducting the inventory under the Protection of Glaciers Law 26.639. IANIGLA has already begun the inventory, which was expected to be completed in 2015. Given the timing required to complete the inventory, the Company did not receive ratification of its DIA in time to undertake a 2015 drill program at Cerro Amarillo. Due to uncertainty of the timing for the completion of the glaciers inventory and the ratification of the permits, the Company has written down the Cerro Amarillo property by \$408,913 to \$1.

On November 14, 2014, the Company announced that Terry Krepiakevich had resigned as a member of the Board of Directors of the Company. Mr. Krepiakevich also resigned as the Company's Chief Executive Officer effective December 14, 2014. David Birkenshaw, Chairman of the Company's Board, took on the duties of Chief Executive Officer. Greg Shenton resigned as a member of the Board of Directors of the Company effective February 26, 2015. On October 23, 2015 David Birkenshaw resigned as a director of the Company and Zula Kropivnitski was appointed as a director.

On March 3, 2015 the Company announced that its Board of Directors has appointed Zula Kropivnitski as Chief Financial Officer and Cassandra Gee as Corporate Secretary both effective March 1, 2015. Ms. Kropivnitski replaces Saurabh Handa while Ms. Gee replaces Alex Bayer.

4. TRENDS AND OUTLOOK

Meryllion is an exploration company with its focus on South America. It has a highly qualified team of professionals engaged in exploration activities and the search for quality resource opportunities. The Company's goal is to discover and develop mineral projects that can significantly add value to its shareholders while building for the future. The Company has set realistic targets for each of the projects currently under development and will make decisions to progress the properties based entirely on the results generated from those properties and the perceived risks and expenses associated with taking those properties to the next phase of development.

In the 2014 fiscal year the Company completed a NI 43-101 technical report for its Cerro Amarillo Project setting a drill proposal for the first-stage target testing. The Company also submitted the necessary documentation required for a drilling permit to the relevant authorities of the Province of Mendoza. Due to a requirement for IANIGLA to complete a glacier inventory and the anticipated timing of the completion of the inventory on the property, the Company did not receive the ratification for the drill permit in time to conduct a 2015 drill program. Accordingly, the Company will focus on reducing costs as it awaits final ratification of its DIA for Cerro Amarillo.

The Company will also turn its focus on other strategic initiatives. In July 2015 the Company's wholly owned Argentine subsidiary acquired the option to purchase the Samenta Cu-Mo porphyry prospect located in the province of Salta in northwestern Argentina. For the Providencia Project, the Company terminated two option agreements and is currently exploring strategic options for the remaining option agreement that now makes up the Providencia Project.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

4. TRENDS AND OUTLOOK (Continued)

The Company does not believe its current working capital is sufficient to maintain its core operations for the next twelve months, and additional funding will be required by the Company to complete its strategic objectives and continue as a going concern. There is no certainty that additional funding at terms that are acceptable to the Company will be available. The Company may raise additional funds through debt, the issuance of shares or through a strategic partnership. The inability to obtain additional financing may cast substantial doubt on the Company's ability to continue as a going concern.

5. SELECTED ANNUAL INFORMATION

For the years ended September 30, 2015, 2014 and 2013:

	September 30, 2015	September 30, 2014	September 30, 2013
Revenue	\$ -	\$ -	\$ -
Net loss for the year	\$(2,017,496)	\$(4,007,758)	\$(1,578,590)
Basic and diluted loss per share	\$ (0.12)	\$ (0.28)	\$ (0.09)
Total assets	\$ 108,495	\$ 1,936,933	\$ 798,078
Total liabilities	\$ 314,558	\$ 207,263	\$ 60,376
Cash dividends declared	\$ -	\$ -	\$ -

During fiscal 2015, the Company signed an agreement to explore the Samenta Project in Argentina. The Company has no revenue to report for the 2015, 2014 and 2013 fiscal years.

6. SUMMARY OF SELECTED QUARTERLY RESULTS

(Amounts are expressed in thousands of Canadian dollars, except per-share amounts)

	2016	2015				2014		
	Q1	Q4	Q3	Q2	Q1	Q4	Q3	Q2
Total assets	\$ 71	\$ 108	\$ 550	\$ 847	\$ 1,486	\$ 1,937	\$ 2,735	\$ 3,913
Mineral interests	42	40	409	416	351	339	521	991
Evaluation and exploration expenses	(78)	(137)	(73)	(115)	(212)	(251)	(517)	(510)
Net loss for the period	(105)	(720)	(235)	(564)	(499)	(824)	(1,251)	(874)
Comprehensive loss for the period	(96)	(688)	(270)	(525)	(486)	(811)	(1,272)	(836)
Basic and diluted loss per share	(0.01)	(0.04)	(0.01)	(0.03)	(0.03)	(0.05)	(0.07)	(0.05)

Note: Quarterly amounts added together may not equal the total reported for the period due to rounding.

As the Company is currently in the exploration stage, the variations in financial results of the Company on a quarter by quarter basis are primarily due to fluctuations in the level of exploration activity and administration costs.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

7. RESULTS OF OPERATIONS

The operating results of junior mining companies can fluctuate significantly from period to period. The Company is in the exploration stage and has no revenue from operations.

Review of Quarterly Financial Results – Three months ended December 31, 2015 (“Q1 2016”) compared to the Three months ended December 31, 2014 (“Q1 2015”)

The Company recorded a net loss of \$105,184 for Q1 2016, as compared to a net loss of \$498,822 for Q1 2015. The decrease in the loss of \$393,638 was attributable to the following material differences:

Evaluation and exploration expenses were \$78,078 for Q1 2016 as compared to \$211,583 for Q1 2015. This decrease of \$133,505 was related to the decreased level of exploration activities in Q1 2016 as compared to Q1 2015.

Salaries and benefits were \$(6,250) for Q1 2016, as compared to \$123,657 for Q1 2015. This decrease of \$129,907 is because the Company changed its management team in the second quarter of 2015. A director resigned subsequent to the three months ended December 31, 2015 and relinquished directors fees payable to him in the amount of \$18,750 as at December 31, 2015, resulting in net recovery of \$6,250 of the directors fee recorded during the three month ended December 31, 2015.

Professional fees were \$10,789 for Q1 2016, as compared to \$77,227 for Q1 2015. This decrease of \$66,438 was related primarily to changes in Argentina, elections and uncertainties how to move the Company forward.

Share-based compensation was \$26,390 for Q1 2015. There was no share-based compensation recorded during the Q1 2016. All stock options granted by the Company vested in 2015 fiscal year.

Travel expense was \$40,612 for Q1 2015. Rent expense was \$24,654 during the Q1 2015. The Company did not record any travelling or rent expenses in Q1 2016. These decreases were due to the Company preserving available resources during a period of unprecedented downturn in the industry.

8. MINERAL INTERESTS

Through the Company's wholly-owned subsidiaries, the Company controls exploration concessions in Argentina classified by the Company as the Cerro Amarillo Project, Providencia Project and Samenta Project.

On October 1, 2013, the Company granted Fitzcarraldo Ventures Inc. and Willem Fuchter (combined the “FVI”) a 1% NSR on the Providencia and Cerro Amarillo Projects (the “FVI NSR”). The Company has the right to buy half of the FVI NSR for US\$500,000 until September 30, 2018. The FVI NSR is in addition to any NSR royalties granted on each option agreement as detailed below.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

8. MINERAL INTERESTS (Continued)

(a) Cerro Amarillo Project, Argentina

The Cerro Amarillo Project is a Copper-Gold-Molybdenum porphyry project located in West-Central Argentina, and lies at the southern end of the highly mineralized late Miocene – Pliocene aged magmatic arc which hosts the El Teniente and Los Bronces porphyry deposits in Chile. The property comprises some 16,740 ha and contains a cluster of mineralized porphyry systems, including five which are believed prospective. These porphyry systems include Cerro Apero, Vaca de Cobre, Cerro Choro, Cajon Grande, and La Blanca, and lie within a northeast-trending corridor which cross-cuts the property, with Cerro Apero and Vaca de Cobre in the northeast, Cerro Choro and Cajon Grande in the center, and La Blanca in the southwest of the 14 km x 11 km property.

Cerro Amarillo Project – Option to Purchase Agreement

In February 2015, the Company amended its option agreement on Cerro Amarillo with the underlying owner by simultaneously terminating its earlier agreement, paying US\$22,000 and signing a new agreement which grants the Company the exclusive rights to conduct exploration activities on the property and to acquire a 100% interest in the property.

Under the terms of the new agreement, Meryllion has the right to purchase the property by paying US\$ 3,128,000 as follows:

- | | |
|---|-------------------|
| • On acceptance of the offer | US\$ 3,000 (Paid) |
| • On ratification and receipt of permit | US\$ 25,000 |
| • On initiation of exploration activities
(or 30 November following receipt of permit) | US\$ 50,000 |
| • 12 months after ratification and receipt of permit | US\$ 250,000 |
| • 24 months after ratification and receipt of permit | US\$ 300,000 |
| • 36 months after ratification and receipt of permit | US\$ 2,500,000 |

If ratification is delayed, then a US\$25,000 payment will be due on every anniversary of the revised date until ratification and permitting is achieved.

The underlying owners of the property will also be entitled to a 1% NSR in the event that the properties are placed into commercial production, which the Company may purchase for US\$ 3,000,000. In addition, Meryllion has granted a further 1% NSR to Fitzcarraldo Ventures Inc (FVI); the Company has the right to buy back half of the FVI NSR for US\$500,000 until September 2018.

Cerro Amarillo Project – Exploration

The Company has conducted exploration campaigns on the property during the austral summers of 2011/2012 and 2013/2014. During the 2011/2012 campaign, detailed mapping and rock grab-sampling better defined the Cerro Apero and Cajon Grande prospects, and reconnaissance-scale mapping and sampling identified the La Blanca alteration zone.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

8. MINERAL INTERESTS (Continued)

(a) Cerro Amarillo Project, Argentina (continued)

The 2013/2014 exploration program consisted of mapping and sampling at the Vaca de Cobre prospect and detailed follow-up work at La Blanca which lead to the identification of the La Blanca mineralized breccia pipes. In addition, close-spaced and locally gridded geochemical surveys were completed over La Blanca, Cajon Grande, Cerro Choro, and Vaca de Cobre. Ground geophysical surveys (IP and ground magnetics) were completed at Cerro Apero and Cajon Grande, and an airborne magnetic and radiometric survey was conducted over the entire property. As well, the Company continued its routine reconnaissance-scale prospecting and mapping program, following-up on hydrothermal alteration-related color anomalies over other portions of the property.

Results to-date have confirmed the presence of mineralization at Cerro Apero, Vaca de Cobre, Cajon Grande, and La Blanca which were originally targeted from satellite imagery color-anomalies; preliminary work on Cerro Choro has indicated the presence of alteration and geochemical anomalies requiring further follow-up.

Cerro Amarillo Project – NI 43-101 Technical Report

On July 28, 2014, the Company announced that it has released a NI 43-101 technical report entitled "*Technical Report on the Cerro Amarillo Project, Mendoza Province, Argentina*" which is available on SEDAR at www.sedar.com. The report recommends that the Company proceed with a 14-hole, 5,300 m first stage drilling program on the property. Details about the prospects and the results of the exploration program can be found in this technical report.

Cerro Amarillo Project – Permitting Update

In Argentina, individual provinces implement and enforce the federally enacted Mining Code through their own provincial statutes, which provide broad authority to grant and govern all activities associated with mineral rights. Under the Mining Code, an Environmental Impact Report ("EIR") must be filed with, and approved by, the provincial mining authorities who then issue an Environmental Impact Statement or *Declaración de Impacto Ambiental* ("DIA"). Furthermore, under Provincial Law 7722, Mendoza Province mandates that any DIA approved by provincial mining authorities must also be ratified by the Provincial Congress.

On September 16, 2014, the Company announced that the relevant authorities in Mendoza Province had approved the EIR for planned drilling operations at the Company's Cerro Amarillo Project. The Company was issued a DIA which was submitted to the Mendoza Provincial Congress for ratification.

On December 1, 2014, the Company announced that during the congressional deliberations that took place in November 2014, it was determined that any decision regarding the issuance and ratification of the Cerro Amarillo DIA should be delayed pending the completion of an inventory of glaciers in or near the project to be conducted by *Instituto Argentino de Nivología Glaciología y Ciencias Ambientales* ("IANIGLA"), the federal body charged with conducting the inventory under the Protection of Glaciers Law 26.639. IANIGLA has already begun the inventory, which was expected to be completed in 2015. The Company did not receive ratification of its DIA in time to undertake a 2015 drill program at Cerro Amarillo.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

8. MINERAL INTERESTS (Continued)

(a) Cerro Amarillo Project, Argentina (continued)

The Company remains hopeful that after the conclusion of the glacier inventory by IANIGLA, the Company's Cerro Amarillo Project will receive ratification from the Provincial Congress of its drill permit. The timing, and ultimate receipt, of such ratification is not clear at this time. Failure to receive a drill permit in a timely fashion, or at all, will have a direct impact on the Company's ability to advance the Cerro Amarillo Project and resulted in the impairment of the project recorded in 2015.

Cerro Amarillo Project – Future Plans

Exploration carried to-date confirms the over-all potential of the numerous prospects as well as other anomalies which require further testing. Each prospect has a large-scale footprint indicating large-tonnage Cu-Au-Mo potential. This, together with Cerro Amarillo's geological similarity to the world-class El Teniente and Los Bronces deposits as well as its location within the extension of the same Neogene magmatic arc, are positive indications for future exploration success.

Due to the delay in receiving the DIA for Cerro Amarillo, the Company will focus on reducing costs in Argentina as it awaits final ratification. Once the Company has received a drill permit it will need to raise additional capital as its current resources will not be sufficient to conduct a drill campaign.

There is no certainty that additional financing at terms that are acceptable to the Company will be available.

(b) Providencia Project, Argentina

The Providencia Project is a Ag-Cu prospect located in North-West Argentina comprising a number of properties, each subject to their own option agreement. The Providencia Project comprises mineral concessions situated at 4,200 m above sea level and some 260 km by good road from San Salvador de Jujuy, the capital of the Jujuy Province.

On August 22, 2014, the Company announced that it had terminated the La Providencia & M. Tola option agreement, which was one of four option agreements that previously made up its Providencia Project. Following the encouraging results from its 2014 exploration campaign at Cerro Amarillo, the Company terminated the most expensive option agreement at Providencia. Although the option agreement that was terminated contains the previously disclosed inferred resource estimate, the cost and development profile did not fit with the Company's strategic direction, after numerous attempts failed to joint venture and/or sell the property. The decision to terminate the La Providencia & M. Tola option agreement will save the Company US\$825,000 in option payments.

During the year ended September 30, 2015, the Company terminated the remaining agreements that made up the Providencia Project.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

8. MINERAL INTERESTS (Continued)

(b) Providencia Project, Argentina (continued)

At the fiscal year ended September 30, 2014 the Company assessed the Providencia Project for indications of impairment. The Company has determined that although it has not terminated all the option agreements for the project, the option agreement that was terminated contained all of the previously disclosed inferred resource. Based on the lack of defined resources on the remaining Providencia Project and the Company's focus on the Cerro Amarillo Project going forward, all costs capitalized as mineral interests for the Providencia Project were written off as at September 30, 2014 and an impairment charge of \$749,054 was recorded in the twelve months ended September 30, 2014.

(c) Samenta Project, Argentina

In July 2015 the Company's wholly owned Argentine subsidiary acquired the option to purchase the Samenta Cu-Mo porphyry prospect located in the Salta province of northwestern Argentina. The Company signed exploration-with-option-to-purchase agreements on two separate but contiguous claim groups, Cerro Samenta Norte and Cerro Samenta Sur, comprising the Samenta Project. The option agreement was subject to final legal due diligence which was completed within 45 days. Meryllion made a US\$30,000 payment upon completion of the due diligence and will make a US\$50,000 payment after 12 months, US\$70,000 after 24 months, US\$90,000 after 36 months and US\$130,000 after 48 months. An exercise fee of US\$4,230,000 will be due at the end of month 60. The underlying owners are also entitled to a 1.5% NSR royalty of which 0.5% can be purchased back for US\$1,000,000.

Samenta covers an area of 5,308 ha (53 sq-km) and lies at elevations between 3,900 m and 4,800 m above sea level in the Puna region, 270 km west of the city of Salta. Access is via paved and all-season gravel roads, and infrastructure is moderate with adequate water sources and a railhead nearby. More importantly, the Project forms part of a rapidly developing mineral district which includes the Taca Taca porphyry Cu deposit (First Quantum Minerals), Rio Grande porphyry Cu-Au prospect (Regulus Resources), and the Lindero porphyry Cu-Au project (Goldrock Mines). Samenta, Rio Grande and Lindero/Arizaro are all situated along the Archibarca Lineament which controls the Diablillos Au-Ag project (Silver Standard Resources) southeast of Samenta, as well the world-class Escondida (BHP-Billiton) porphyry cluster in Chile, some 120 km to the northwest of the project area (Figure 1).

The geological setting of Samenta is typical of classical porphyry-Cu deposits, comprising a sequence of andesitic and dacitic volcanics and underlying basement granitoids, all intruded by a composite quartz monzonite stock. So far, two distinct porphyry-Cu systems have been identified, termed the North and South Zones, both of which are characterized by the development of an extensive leached capping and host several phases of hydrothermal brecciation, and early potassic and propylitic alteration overprinted by large zones of sericitic alteration.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

8. MINERAL INTERESTS (Continued)

(c) Samenta Project, Argentina (continued)

These alteration zones were initially identified by Fabricaciones Militares during the 1960s. Meaningful exploration commenced with the programs of Mansfield Minerals and their joint venture partner Teck Resources. Later, Peregrine Metals undertook further exploration while holding the property under option from Rio Tinto. More recently, Marifil Mines Ltd. and joint venture partner Southern Copper Corporation completed additional work. These exploration programs developed a considerable database consisting of geological mapping, geochemical surveys, and geophysics (Induced Polarization).

Both the North and South Zones are defined by large chargeability/resistivity geophysical anomalies (Figure 2) together with coincident Cu and Mo soil geochemical anomalies. Follow-up trenching has identified a number of Cu oxide zones. Limited, relatively shallow, first-stage drilling intersected mineralization on both the North and the South Zones, as disseminations and in veinlets forming stockworks. Primary mineralization is with pyrite, chalcopyrite, and subordinate molybdenite, while secondary minerals comprise chalcocite, covellite, and chrysocolla.

Work carried out to-date has indicated the presence of large sulphide systems, which remain largely untested, particularly at depth. Considerable potential for additional targets exists under pediment which covers much of the property.

(d) Qualified Person

Dr. Willem Fuchter P.Geo, CEO of Meryllion Argentina SA, a qualified person for the purposes of NI 43-101, has approved the scientific and technical information in this MD&A.

9. FINANCIAL INSTRUMENTS

Financial assets and liabilities are recognized when the Company becomes a party to the contractual provisions of the instrument. Financial assets are derecognized when the rights to receive cash flows from the assets have expired or have been transferred and the Company has transferred substantially all risks and rewards of ownership.

All of the Company's financial instruments are classified into one of two categories: loans-and-receivables or other-financial-liabilities. All financial instruments are measured in the consolidated statement of financial position at fair value initially. Subsequent measurement and changes in fair value will depend on their initial classification. Loans-and-receivables and other-financial-liabilities are measured at amortized cost.

The Company has designated its cash and cash equivalents and accounts receivable as loans-and-receivables and accounts payable and accrued liabilities as other-financial-liabilities. Cash and cash equivalents and accounts receivable are included in current assets due to their short term nature. Accounts payable and accrued liabilities are included in current liabilities due to their short-term nature.

The Company's financial instruments as at December 31, 2015 are as follows:

	As at	
	December 31, 2015	September 30, 2015
Financial assets		
Loans-and-receivables		
Cash and cash equivalents	\$ 10,732	\$ 55,914
Accounts receivable	1,822	4,636
Total financial assets	\$ 12,554	\$ 60,550
Financial liabilities		
Other financial-liabilities		
Accounts payable and accrued liabilities	\$ 373,523	\$ 314,558
Total financial liabilities	\$ 373,523	\$ 314,558

Additional financial instruments disclosure, including an analysis of risks associated with financial instruments, is contained in Note 3 of the Company's condensed interim consolidated financial statements for the three months ended December 31, 2015.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis

(Unaudited)

(In Canadian Dollars unless otherwise stated)

10. LIQUIDITY AND CAPITAL RESOURCES

(a) Liquidity

The Company's working capital deficiency as at December 31, 2015 was \$344,040 as compared to working capital deficiency of \$246,246 at September 30, 2015. Included in working capital were cash and cash equivalents of \$10,732 (September 30, 2015 - \$55,914).

Except as disclosed, the Company does not know of any trends, demands, commitments, events or uncertainties that will result in, or that are reasonably likely to result in, its liquidity either materially increasing or decreasing at present or in the foreseeable future. Material increases or decreases in liquidity are substantially determined by the success or failure of the Company's exploration programs and the Company's ability to raise additional capital as required.

The Company is not now and does not expect in the future, to be engaged in currency hedging to offset any risk of currency fluctuations.

(b) Capital Resources

The Company's focus for the recently completed fiscal period and going forward is the advancement and development of its exploration projects. The major expenses that will be incurred by the Company in the next twelve months will be costs associated with its exploration activities and general and administrative activities. The Company does not believe its current working capital is sufficient to maintain its core operations for the next twelve months, and additional funding will be required by the Company to complete its strategic objectives and continue as a going concern.

The Company depends on external financing to fund its activities and there can be no guarantee that external financing will be available at terms acceptable to the Company. The Company will be relying on further equity financing, debt financing, strategic partnerships or joint-venture partnerships as the most likely source of funds for the advancement of the Company's exploration assets to a resource delineation or feasibility stage. In the future the Company may also receive additional funds through the exercise of stock options. If adequate funds are not available when required, the Company may, based on the Company's cash position, delay, scale back or eliminate various programs.

There can be no assurance that the Company will have sufficient financing to meet its future capital requirements or that future additional financing will be available to the Company at acceptable terms. The inability to obtain additional financing may cast substantial doubt on the Company's ability to continue as a going concern.

(c) Off-Balance Sheet Arrangements

The Company has no off-balance sheet arrangements other than those disclosed under mineral interests.

(d) Proposed Transactions

The Company has no proposed transactions.

(Unaudited)

(In Canadian Dollars unless otherwise stated)

10. LIQUIDITY AND CAPITAL RESOURCES (Continued)

(e) Commitments

As at December 31, 2015, the Company has mineral interest commitments at its Cerro Amarillo and Samenta projects in the form of option payments and minimum work commitments for various mineral exploration concessions. The Company is in the process of conducting a strategic review of its properties under option and although as at December 31, 2015 the Company had the commitments shown in the table below some of these commitments could be reduced or eliminated completely pending the outcome of the strategic review.

The Company also has minimum rental and operating expense payments for the Company's office space in Buenos Aires where the lease expired on November 20, 2015 and operating expense payments in Vancouver.

The Company's commitments for these items as at December 31, 2015 and when they are expected to be incurred were as follows:

	As at December 31,				
	2016	2017	2018	2019	Total
Mineral interest commitments					
Cerro Amarillo Project	\$ 33,485	\$ 33,485	\$ 33,485	\$ 33,485	\$ 133,940
Samenta	66,970	93,758	120,546	174,122	455,396
Total mineral interest commitments	100,455	127,243	154,031	207,607	589,336

11. RELATED PARTY TRANSACTIONS

(a) Key management compensation

The remuneration of the Company's Directors consists of the following amounts:

	Three months ended December 31,	
	2015	2014
Short-term benefits ⁽¹⁾	\$ (6,250)	\$ 105,350
Share-based compensation ⁽²⁾	-	15,558
Total directors compensation	\$ (6,250)	\$ 120,908

(1) Short term benefits include salaries, bonuses, consulting fees (included in professional fees) and directors fees for all directors and key management personnel.

(2) Share-based compensation is the fair value of stock options granted to directors and key management personnel where an expense was recorded in the period due to vesting conditions.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

11. RELATED PARTY TRANSACTIONS (Continued)

(a) Key management compensation (continued)

As at December 31, 2015, the Company owed \$62,103 (September 30, 2015: \$93,353) in directors fees, advances and expenses to the directors and former directors of the Company which will be paid at a later date. Subsequent to the period end a director resigned and forgone \$18,750 in director's fees.

(b) Other related party transactions

The Company shared office space, equipment and office administrative services with Western Lithium USA Corporation ("WLC"). These services had been mainly provided through a private management company, WMM Services Corporation ("WMM"), equally owned by the Company and WLC and were related by virtue of a common director. In November 2014, the Company transferred its ownership in WMM to the WLC. Costs incurred by the management company are allocated between the Company and WLC based on time incurred and use of services and are charged at cost.

The Company had related party transactions with WMM of \$19,798 for the three months ended December 31, 2014 which were included in the following expense categories:

	Three months ended December 31,	
	2015	2014
Office and administration	\$ -	\$ 6,168
Rent	-	22,861
Salaries and benefits	-	1,769
Total related party transactions	\$ -	\$ 19,798

As at December 31, 2015 and September 30, 2015 the balance due to WMM was \$nil. Starting from March 1, 2015 the Company terminated the agreement with WMM and entered into an Administration and Corporate Development Services Agreement with a management company to provide administrative services including services of a Chief Financial Officer. During the three months ended December 31, 2015 the Company incurred \$30,000 in fees paid to this management company. As at December 31, 2015 \$21,000 (September 30, 2015 - \$nil) was payable to this company.

12. OUTSTANDING SHARE DATA

The Company is authorized to issue an unlimited number of common shares without par value. As at February 25, 2016, the Company had 17,125,510 common shares issued and outstanding.

The Company has the following stock options that are outstanding and exercisable as at February 25, 2016:

Exercise price	Outstanding and Exercisable	
	Number	Weighted average remaining life (years)
\$0.30	550,000	2.87

As at February 25, 2016, the Company did not have any share purchase warrants outstanding.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

13. RISKS AND UNCERTAINTIES

The Company's exploration activities and related results are subject to a number of different risks at any given time. These factors, include but are not limited to disclosure regarding: receiving required permits in Argentina, exploration results, additional financing, project delay, titles to properties, price fluctuations and share price volatility, operating hazards, insurable risks and limitations of insurance, management, foreign country and regulatory requirements, currency fluctuations and environmental regulations risks. Exploration for mineral resources involves a high degree of risk. The cost of conducting programs may be substantial and the likelihood of success is difficult to assess. The Company seeks to counter this risk as far as possible by selecting exploration areas on the basis of their recognized geological potential to host economic deposits.

A summary of the Company's financial instruments risk exposure is provided in Note 6 of the Company's consolidated financial statements for the twelve months ended September 30, 2015. The following are additional risk factors which the Company's management believes are most important in the context of the Company's business. It should be noted that this list is not exhaustive and that other risk factors may apply.

The Company's exploration and mining activities are in Argentina and are subject to the risks of political and economic instability associated with this country.

Argentina has, from time to time, experienced economic or political instability. The Company may be materially adversely affected by risks associated with conducting exploration and mining activities in Argentina, including: political instability and violence; war and civil disturbance; acts of terrorism; expropriation or nationalization; inequitable treatment of non-domiciled companies; changing fiscal regimes; fluctuations in currency exchange rates; high rates of inflation; underdeveloped industrial and economic infrastructure; and unenforceability of contractual rights.

Argentine regulators have broad authority to shut down and/or levy fines against operations that do not comply with regulations or standards. In addition, factors such as those listed above, the Company's mineral exploration and potential future mining activities in Argentina may also be affected in varying degrees by government regulations with respect to exploration and mining permit application requirements, restrictions on production, price controls, foreign exchange controls, export controls, taxes, royalties, environmental legislation and mine safety. Regardless of the economic viability of the Company's interest in its properties, and despite being beyond the Company's control, such factors may prevent or restrict mining of some or all of any deposits which the Company may find on its properties.

In May 2012, the government of Argentina re-nationalized Yacimientos Petrolíferos Fiscales ("YPF"), the country's largest oil and gas company. There can be no assurance that the government of Argentina will not nationalize other businesses operating in the country, including the business of the Company.

Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

13. RISKS AND UNCERTAINTIES (Continued)

In addition, provincial governments of Argentina have considerable authority over exploration and mining in their province and there are Argentinean provinces where the provincial government has taken an anti-mining stance by passing laws to curtail or ban mining in those provinces. The current provincial government of Mendoza Province, where the Cerro Amarillo Project is situated, has not been supportive of the exploration and mining industry and although the situation may change in the future, there is no guarantee that such a change will occur. The current provincial government of Jujuy Province, where the Providencia Project is situated, is supportive of the exploration and mining industry; however such situation may change in the future.

Argentina has, in the past, and is currently enduring a period of high inflation which could increase the Company's operating costs relating to work carried out on its properties. The Company will also purchase certain supplies and retain the services of various companies in Argentina to meet its future business plans. It may be difficult to find or hire qualified people in the mining industry who are situated in Argentina or to obtain all of the necessary services or expertise in Argentina or to conduct operations on its Providencia, Cerro Amarillo Projects and Samenta (the "Projects") at reasonable rates. If qualified people and services or expertise cannot be obtained in Argentina, the Company may need to seek and obtain those services from people located outside of Argentina which will require work permits and compliance with applicable laws and could result in delays and higher costs to the Company to conduct its operations in Argentina. In addition, Argentina's status as a developing country may make it more difficult for the Company to obtain any required financing for its projects. If a dispute arises regarding the Company's interest to its properties, the Company cannot rely on Canadian legal standards in defending or advancing its interests.

As a result, the Company will be subject to various increased economic, political, operational and other risks, any one or more of which could have a material adverse effect on its business, financial condition, and results of operations or prospects.

The development and success of the Projects will be largely dependent on the future price of silver, copper and other metals

Metal price volatility may affect the future production, profitability, and financial condition of the Company. Metal prices are subject to significant fluctuation and are affected by a number of factors which are beyond the control of the Company. Such factors include, but are not limited to, interest rates, exchange rates, inflation or deflation, global supply and demand, and political economic conditions of major metal consuming countries throughout the world. The price of silver, copper, and other metals has fluctuated widely in recent years, and future material price declines could cause development of, and commercial production from, the Projects to be impracticable or uneconomic.

The metals market also tends to move in cycles. Periods of high demand, increasing profits and high capacity utilization lead to additional capacity through expansion of existing mines and investment in new mines which results in increased production. This growth increases supply until the market is saturated, leading to declining prices and declining capacity utilization until the cycle repeats. This cyclical nature in prices can result in supply/demand imbalances and pressures on mineral prices and profit margins which could have a material adverse effect on the Company's business, financial condition, results of operations or prospects.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

13. RISKS AND UNCERTAINTIES (Continued)

Depending on the price of silver, copper, and other metals, projected cash flow from planned mining operations may not be sufficient and the Company could be forced to discontinue development and may lose its interest in, or may be forced to sell, one or more of the mining properties. Future production from the Company's mining properties will be dependent on metal prices that are adequate to make these properties economically viable. Furthermore, future mine plans using significantly lower metal prices could result in material write-downs of the Company's investment in mining properties.

In addition to adversely affecting any future Mineral Reserve estimates and its financial condition, declining commodity prices can impact operations by requiring a reassessment of the feasibility of a particular project. Such a reassessment may be the result of a management decision or may be required under financing arrangements related to a particular project. If such a reassessment determines that any of the Company's projects are not economically viable, then operations may cease and such projects may never be developed. Even if the projects are ultimately determined to be economically viable, the need to conduct such a reassessment may cause substantial delays or may interrupt operations until the reassessment can be completed. The occurrence of any of the foregoing could have a material adverse effect on the Company's business, financial condition, results of operations or prospects.

Meryllion will need substantial additional financing in the future and cannot assure that such financing will be available

To meet its operating costs and to finance its respective future acquisition, exploration, development and operating activities, the Company will require financing from external sources, including from the sale of equity and debt securities, the sale of an interest in one or more of its mineral projects, entering into joint ventures or seeking other means to meet its financing requirements. There can be no assurance that additional funding will be available to the Company or, if available, that such funding will be offered on terms acceptable to the Company. If additional financing is raised through the issuance of equity or convertible debt securities, control of the Company may change and the interests of shareholders in the net assets of the respective company may be diluted. If unable to secure financing on acceptable terms, the Company may have to cancel or postpone certain of its planned exploration and development activities and may not be able to take advantage of acquisition opportunities. If the Company is unable to complete minimum work obligations on its exploration concessions, the concessions could be relinquished under applicable exploration concession agreements. The failure of the Company to obtain additional financing would have a material adverse effect on its business, financial condition, results of operations or prospects.

Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

13. RISKS AND UNCERTAINTIES (Continued)

The volatility of the capital markets may affect the Company's access to and cost of capital

Securities markets throughout the world are cyclical and, over time, tend to undergo high levels of price and volume volatility, and the market price of securities of many companies, particularly those in the resource sector, can experience wide fluctuations which are not necessarily related to the operating performance, underlying asset values or prospects of such companies. Increased levels of volatility and resulting market turmoil may adversely impact the Company and its share price. If the Company is required to access credit markets to carry out their respective development objectives, the state of domestic and international credit markets and other financial systems could affect their respective access to, and cost of, capital. If these credit markets were significantly disrupted, as they were in 2007 and 2008, such disruptions could make it more difficult for the Company to obtain, or increase its cost of obtaining capital and financing for its operations. Such capital may not be available on terms acceptable to the Company or at all, which may have a material adverse impact on its business, financial condition, results of operations or prospects.

Currency fluctuations may affect the costs that the Company incurs in its operations

The Company's reporting currency is the Canadian dollar. Any future equity financing activities are expected to be completed in Canadian dollars while a significant portion of operating expenses for the Company will be incurred in Argentine pesos, among other foreign currencies. From time to time, the Company may be required to borrow funds and incur expenditures that are denominated in a foreign currency. In addition, in the event that the Company successfully develops an operating mine, it expects to sell some or all of its products to foreign markets. Metals are sold throughout the world, based principally on a U.S. dollar price, but, a significant portion of the Company's operating expenses are incurred in non-U.S. dollar currencies. The appreciation of the Argentinean peso, the U.S. dollar or any other foreign currency with which the Company operates against the Canadian dollar would increase its cost of operations, which could have a material adverse effect on its business, financial conditions, results of operations and prospects.

Exploration Risk

In addition to the Projects, the Company may engage in the potential acquisition and exploration of other resource properties, an inherently risky business, and there is no assurance that economic mineral deposits will ever be discovered, or if discovered, subsequently put into production. Most exploration activities do not result in the discovery of commercially mineable deposits.

Early Stage of Development

The predecessor entity of the Company, Concordia, conducted mineral exploration activities for a relatively short period. There is limited financial, operational and other information available with which to evaluate the prospects of the Company. There can be no assurance that the Company's operations will be profitable in the future or will generate sufficient cash flow to satisfy its working capital requirements.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

13. RISKS AND UNCERTAINTIES (Continued)

The Company's prospects depend on its ability to attract and retain qualified personnel

Recruiting and retaining qualified personnel will be critical to the Company's success. The number of persons skilled in the acquisition, exploration and development of mining properties is limited and competition for such persons is intense. The Company believes that it will have the necessary personnel to meet its corporate objectives but, as its business activities grow, it will require additional key financial, administrative, mining and public relations personnel as well as additional staff on the operations side. Although the Company believes that it will be successful in attracting and retaining qualified personnel, there can be no assurance of such success.

Future mining operations and exploration activities are subject to laws and regulations relating to the protection and remediation of the environment

The Company's future mining operations and exploration activities are and will be subject to laws and regulations relating to the protection and remediation of the environment. Environmental legislation provides for restrictions and prohibitions on spills, releases or emissions of various substances produced in association with certain mining industry operations, such as seepage from tailings disposal areas, which would result in environmental pollution. These laws, regulations and the governmental policies for implementation of such laws and regulations are constantly changing and are generally becoming more restrictive. The costs associated with compliance with these laws and regulations are substantial and possible future laws and regulations and changes to existing laws and regulations (including the imposition of higher taxes and mining royalties) could cause additional expense or capital expenditure, or result in restrictions or delays in the Company's development plans.

The Company cannot give any assurance that, notwithstanding its precautions and careful operating practices, breaches of environmental laws, whether inadvertent or not, or some type of environmental problem will not occur. In the event of any such breach, it is possible that the respective regulatory authority can suspend the rights of the Company, as applicable, to develop its mineral interests.

A breach of environmental laws and regulations may allow governmental authorities and third parties, who have an interest in any future mining operations or the consequences of mining operations, to bring lawsuits based upon damages to property and injury to persons resulting from the environmental impact of the Company's potential future operations which could lead to the imposition of substantial fines, penalties or other civil or criminal sanctions and could have a material adverse effect on the Company's business, financial condition, results of operations or prospects.

If the Company's environmental compliance obligations were to vary as a result of changes to legislation, or if certain assumptions the Company makes to estimate liabilities are incorrect, or if unanticipated conditions were to arise in the Company's future mining operations, the Company's expenses and other obligations could increase, which could have a material adverse effect on the Company's business, financial condition, results of operations or prospects.

(Unaudited)

(In Canadian Dollars unless otherwise stated)

13. RISKS AND UNCERTAINTIES (Continued)

As a participant in the resource extraction industry, the Company may face opposition from local and international groups

There is an increasing level of public concern relating to the effects of mining production on its surroundings, communities, and environment. Certain non-governmental organizations, public interest groups and reporting organizations ("NGOs"), who oppose globalization and resource development and who may not be bound to codes of ethical reporting, can be vocal critics of the mining industry. In addition, there have been many instances in which local community groups have opposed resource extraction activities, which have resulted in disruption and delays to the relevant operation. While the Company will seek to operate in a socially responsible manner, NGOs or local community organizations could direct adverse publicity and/or disrupt its operations in respect of one or more properties, regardless of the Company's successful compliance with social and environmental best practices, due to political factors and/or activities of unrelated third parties on lands in which the Company has an interest or operates. Any such actions and the resulting media coverage could have an adverse effect on the reputation and financial condition of the Company, as applicable, or its relationships with the communities in which it operates, which could have a material adverse effect on the Company's business, financial condition, results of operations or prospects.

The costs of complying with applicable laws and governmental regulations may have an adverse impact on the Company's business

The Company's operations and exploration activities will be subject to laws and regulations governing various matters. These include without limitation laws and regulations relating to repatriation of capital and exchange controls, taxation, labour standards and occupational health and safety and historic and cultural preservation.

Amendments to current laws, regulations and permits governing operations and activities of mining companies, or the more stringent enforcement thereof, could have a material adverse effect on the Company's business, financial condition, results of operations or prospects by increasing exploration expenses, future capital expenditures or future production costs or by reducing the future level of production, or cause the abandonment of or delays in the development of the Projects.

Competition in the mining industry may adversely affect the Company

The mining industry is intensely competitive. The Company will compete with other mining companies, many of which have greater resources and experience. Competition in the mining industry is primarily for: (i) properties which can be developed and can produce economically; (ii) the technical expertise to find, develop, and operate such properties; (iii) labour to operate the properties; and (iv) capital to fund such properties. Such competition may result in the Company being unable to acquire desired properties, to recruit or retain qualified employees or to acquire the capital necessary to fund their respective operations and develop their respective properties. The Company's inability to compete with other mining companies for these resources could have a material adverse effect on the Company's business, financial condition, results of operations or prospects.

(In Canadian Dollars unless otherwise stated)

13. RISKS AND UNCERTAINTIES (Continued)

The Company's insurance coverage may not cover all of its potential losses, liabilities and damages related to its business and certain risks are uninsured or uninsurable

The Company's business will be subject to a number of risks and hazards (as further described herein). Although the Company will maintain insurance to protect against certain risks in such amounts as it considers being reasonable, such insurance will likely not cover all the potential risks associated with its activities, including any future mining operations. The Company may also be unable to maintain insurance to cover its risks at economically feasible premiums, or at all. Insurance coverage may not continue to be available or may not be adequate to cover any resulting liability. Moreover, insurance against risks such as environmental pollution or other hazards as a result of exploration or production may not be available to the Company on acceptable or any terms. The Company might also become subject to liability for pollution or other hazards which it is not currently insured against and/or in the future may not insure against because of premium costs or other reasons. Losses from these events may cause the Company to incur significant costs which could have a material adverse effect on the Company's business, financial condition, results of operations or prospects.

Mining and mineral exploration is inherently dangerous and subject to factors or events beyond the Company's control

The Company's business, and any future development or mining operations, will involve various types of risks and hazards typical of companies engaged in the mining industry. These risks will affect the exploration, development and refurbishment activities of the Company, and will affect its business to an even larger extent once commercial mining operations, if any, commence. Such risks include, but are not limited to: (i) industrial accidents; (ii) unusual or unexpected rock formations; (iii) structural cave-ins or slides and pitfall, ground or slope failures and accidental release of water from surface storage facilities; (iv) fire, flooding and earthquakes; (v) rock bursts; (vi) metals losses; (vii) periodic interruptions due to inclement or hazardous weather conditions; (viii) environmental hazards; (ix) discharge of pollutants or hazardous materials; (x) failure of processing and mechanical equipment and other performance problems; (xi) geotechnical risks, including the stability of the underground hanging walls and unusual and unexpected geological conditions; (xii) unanticipated variations in grade and other geological problems, water, surface or underground conditions; (xiii) labour disputes or slowdowns; (xiv) work force health issues as a result of working conditions; and (xv) force majeure events, or other unfavorable operating conditions.

These risks, conditions and events could result in: (i) damage to, or destruction of, the value of, the Projects or their facilities; (ii) personal injury or death; (iii) environmental damage to the Projects or the properties of others; (iv) delays or prohibitions on mining or the transportation of minerals; (v) monetary losses; and (vi) potential legal liability. Any of the foregoing could have a material adverse effect the Company's business, financial condition, results of operation or prospects.

Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

13. RISKS AND UNCERTAINTIES (Continued)

Directors and officers may be subject to conflicts of interest

Certain directors and officers of the Company are or may become associated with other mining and/or mineral exploration and development companies which may give rise to conflicts of interest. Directors who have a material interest in any person who is a party to a material contract or a proposed material contract with the company with which they serve are required, subject to certain exceptions, to disclose that interest and generally abstain from voting on any resolution to approve such a contract. In addition, directors and officers are required to act honestly and in good faith with a view to the best interests of their respective company. Some of the directors and officers have either other full-time employment or other business or time restrictions placed on them and accordingly, the Company will not be the only business enterprise of these directors and officers. Further, any failure of the directors or officers of the Company to address these conflicts in an appropriate manner, or to allocate opportunities that they become aware of to the Company, could have a material adverse effect on the Company's business, financial condition, results of operations or prospects.

14. CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS

The Company's management is required to make judgements in the process of applying the Company's accounting policies in the preparation of its financial statements. In addition, the preparation of the financial statements in accordance with IFRS requires that the Company's management make assumptions and estimates of effects of uncertain future events on the carrying amounts of the Company's assets and liabilities at the end of the reporting period and the reported amounts of revenues and expenses during the reporting period. Actual results may differ from those estimates as the estimation process is inherently uncertain. Estimates are reviewed on an ongoing basis based on historical experience and other factors that are considered to be relevant under the circumstances. While management believes the estimates are reasonable, actual results could differ from these estimates and could impact future results of operations and cash flows. Revisions to estimates and the resulting effects on the carrying amounts of the Company's assets and liabilities are accounted for prospectively.

(a) Critical Estimates in Applying Accounting Policies

Significant assumptions about the future and other sources of estimation uncertainty that management has made at the end of the reporting period, that could result in a material adjustment to the carrying amounts of assets and liabilities, in the event that actual results differ from assumptions made, relate to, but are not limited to, the determination of environmental obligations, the recoverability of mineral interests, the assumptions used in the determination of the fair value of share-based compensation and the assumptions used to estimate the useful life of property, plant and equipment.

(Unaudited)

(In Canadian Dollars unless otherwise stated)

14. CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS (Continued)

(b) Critical Judgements in Applying Accounting Policies

Critical accounting judgments are accounting policies that have been identified as being complex or involving subjective judgments or assessments. The critical accounting judgments used in the preparation of the audited consolidated financial statements are discussed below. Please note this list is not exhaustive.

Functional currency

In accordance with IAS 21 "*The Effects of Changes in Foreign Exchange Rates*", management determined that the functional currency of MRC is the Canadian dollar and the functional currency of the Company's wholly-owned subsidiaries Huayra Minerals Corp. and Meryllion Argentina SA is the US dollar, as they are the currencies of the primary economic environments in which the companies operate.

Impairment of property, plant and equipment and mineral interests

Assets or cash generating units are evaluated at each reporting date to determine whether there are any indications of impairment. The Company considers both internal and external sources of information when making the assessment of whether there are indications of impairment for the Company's property plant and equipment and mineral interests. External sources of information considered are changes in the Company's economic, legal and regulatory environment which it does not control but affect the recoverability of its mining assets. Internal sources of information the Company considers include the manner in which mining properties and plant and equipment are being used or are expected to be used and indications of economic performance of the assets.

If any indication of impairment exists, a formal estimate of recoverable amount is performed and an impairment loss recognized to the extent that carrying amount exceeds recoverable amount. The recoverable amount of an asset or cash generating group of assets is measured at the higher of fair value less costs to sell and value in use.

Going concern risk assessment

The assessment of the Company's ability to continue as a going concern involves significant judgement. Refer to our discussion in Note 1 of the audited consolidated financial statements.

15. CHANGES IN ACCOUNTING POLICIES

The Company adopted the following accounting standards effective October 1, 2014. The adoption of these accounting standards had no significant impact on the audited consolidated financial statements.

MERYLLION RESOURCES CORP.
Management's Discussion and Analysis
Three months ended December 31, 2015

(Unaudited)

(In Canadian Dollars unless otherwise stated)

15. CHANGES IN ACCOUNTING POLICIES (Continued)

The following accounting standards were amended:

- IAS 36 Impairment of Assets - narrow-scope amendment - Recoverable Amount Disclosures
- IFRS 2 Share-based payments
- IFRS 3 Business combinations
- IFRS 8 Operating segments
- IFRS 13 Fair Value Measurement
- IAS 16 Property, Plant and Equipment and IAS 38 Intangible Assets
- IAS 24 Related Party Disclosures
- IAS 40 Investment Property
- IAS 32 Financial Instruments: Presentation

The following are revised accounting standards, amendments and interpretations that are effective for annual periods beginning on or after January 1, 2016. The Company has not yet fully assessed the impact of these standards and amendments. Where permitted, the Company has determined to not adopt any of these future accounting policies early.

IFRS 9 Financial Instruments

The IASB has previously published versions of IFRS 9 that introduced new classification and measurement requirements (in 2009 and 2010) and a new hedge accounting model (in 2013). The July 2014 publication represents the final version of the Standard, replaces earlier versions of IFRS 9 and completes the IASB's project to replace IAS 39 *Financial Instruments: Recognition and Measurement*. This standard is effective for the periods beginning on or after January 1, 2018.

IFRS 16 Leases

IFRS 16 was issued in January 2016 and specifies how an IFRS reporter will recognize, measure, present and disclose leases. The standard provides a single lessee accounting model, requiring lessees to recognize assets and liabilities for all leases unless the lease term is 12 months or less or the underlying asset has a low value. Lessors continue to classify leases as operating or finance, with IFRS 16's approach to lessor accounting substantially unchanged from its predecessor, IAS 17. This standard is effective for reporting periods beginning on or after January 1, 2019.

Annual Improvements to IFRSs 2012 - 2014 Cycle

These amendments are applicable for annual reporting periods beginning on or after January 1, 2016.

- IFRS 5 Non-current Assets Held for Sale and Discontinued Operations was amended to clarify the application guidance in which an entity reclassifies an asset/disposal group from held for sale to held for distribution (or vice versa), and the circumstances in which an asset/disposal group no longer meets the criteria for held for distribution.
- IFRS 7 Financial Instruments: Disclosures was amended to clarify guidance on servicing contracts and the applicability of certain amendments to IFRS 7 to interim financial statements.
- IAS 19 Employee Benefits was amended to clarify application of the discount rate for certain currencies.
- IAS 34 Interim Financial Reporting was amended to clarify the meaning of disclosure of information "elsewhere in the interim financial report".

16. FORWARD LOOKING STATEMENTS

Certain of the statements made and information contained herein are considered "forward-looking information" within the meaning of the British Columbia Securities Act. These statements relate to future events or the Company's future performance. All statements, other than statements of historical fact, may be forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "plan", "continue", "estimate", "expect", "may", "will", "project", "predict", "propose", "potential", "targeting", "intend", "could", "might", "should", "believe" and similar expressions. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. The Company believes that the expectations reflected in those forward-looking statements are reasonable but no assurance can be given that these expectations will prove to be correct and such forward-looking statements included in this MD&A should not be unduly relied upon by investors as actual results may vary. These statements speak only as of the date of this MD&A and are expressly qualified, in their entirety, by this cautionary statement.

In particular, this MD&A contains forward-looking statements, pertaining to the following: capital expenditure programs, development of resources, treatment under governmental and taxation regimes, expectations regarding the Company's ability to raise capital, expenditures to be made by the Company on its properties and work plans to be conducted by the Company. With respect to forward-looking statements listed above and contained in the MD&A, the Company has made assumptions regarding, among other things:

- the impact of currency fluctuations in Argentina;
- the impact of increasing competition in gold, silver and copper business;
- unpredictable changes to the market prices for gold, silver and copper;
- exploration and development costs for its properties;
- availability of additional financing or joint-venture partners;
- anticipated results of exploration activities; and
- the Company's ability to obtain additional financing on satisfactory terms.

The Company's actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth above and elsewhere in this MD&A including, uncertainties relating to receiving mining and exploration permits in Argentina; volatility in the market price for minerals; uncertainties associated with estimating resources; geological, technical, drilling and processing problems; liabilities and risks, including environmental liabilities and risks, inherent in mineral exploration; fluctuations in currencies and interest rates; incorrect assessments of the value of acquisitions; unanticipated results of exploration activities; competition for, amongst other things, capital, undeveloped lands and skilled personnel; lack of availability of additional financing and/or joint venture partners and unpredictable weather conditions.

Investors should not place undue reliance on forward-looking statements as the plans, intentions or expectations upon which they are based might not occur. Readers are cautioned that the foregoing lists of factors are not exhaustive. The forward-looking statements contained in this MD&A are expressly qualified by this cautionary statement. The Company does not undertake any obligation to update or revise any forward-looking statements, whether as a result of new information, future events or otherwise, unless required by law.
