The geology of the Macusani Crucero-Picotani Plateau and surrounding area is unique in that it contains some of the world's most highly evolved rhyolitic peralkaline rocks, both intrusive and extrusive. Such rocks have anomalous accumulation of tin, tungsten, beryllium, rubidium and lithium. At this time lithium exploration has been focused on several flat lying horizons within the Chacaconiza member of the Quenamari Formation of rhyolitic tuff but the presence of lithium in both rhyolitic intrusive and pegmatite rocks has not been thoroughly examined. Most of Sol Sureno's concessions overlie the outcropping Chacsconiza member.

During the period ended June 30, 2022, the Company sold the Macusani Project to Salt Cay Horizon Ltd.

LIQUIDITY AND CAPITAL RESOURCES

The financial statements have been prepared on a going-concern basis, which assumes the realization of assets and liquidation of liabilities in the normal course of business. Continuing operations, as intended, are dependent on management's ability to raise required funding through future equity issuances, its ability to acquire resource property or business interests and develop profitable operations or a combination thereof, which is not assured, given today's volatile and uncertain financial markets. During the period ended June 30, 2022, the Company's working capital position increased a result the Company repaying promissory notes payable of $346,136, advancing $126,549 for a promissory note receivable and cash used in operating activities of $237,939, which was offset with the Company receiving $236,000 to settle share subscriptions receivable.

As at June 30, 2022, the Company had working capital of $2,790,886 (December 31, 2021 – $2,769,468) which primarily consisted of cash of $1,980,289 (2021 - $2,462,982), amounts receivable of $54,817 (2021 - $287,242), prepaid expenses of $5,599 (2021 - $13,820) and a promissory note receivable of $778,121 (2021 - $448,794). Refer to the Operating Activities below for more information on the use of cash in operating, investing and financing activities for the period ended June 30, 2022 and 2021.

Other than the current liabilities outlined above, the Company has no short-term capital spending requirements and future plans and expectations are based on the assumption that the Company will realize its assets and discharge its liabilities in the normal course of business rather than through a process of forced liquidation. There can be no assurance that the Company will be able to obtain adequate financing in the future or if available that such financing will be on acceptable terms. If adequate financing is not available when required, the Company may be required to delay, scale back or eliminate various programs and may be unable to continue in operation. The Company may seek such additional financing through debt or equity offerings. Any equity offering will result in dilution to the ownership interests of the Company's shareholders and may result in dilution to the value of such interests.

LIQUIDITY AND CAPITAL RESOURCES (CONTINUED)

The Company's future revenues, if any, are expected to be from the mining and sale of mineral products or interests related thereto. The economics of developing and producing mineral products are affected by many factors including the cost of operations, variations in the grade of ore mined, and the price of metals. Depending on the price of metals, the Company may determine that it is impractical to continue commercial production. The price of metals has fluctuated widely in recent years and is affected by many factors beyond the Company's control including changes in international investment patterns and monetary systems, economic growth rates, political developments, the extent of sales or accumulation of reserves by governments, and shifts in private supplies of and demands for metals. The supply of metals consists of a combination of mine production, recycled material, and existing stocks held by governments, producers, financial institutions and consumers. If the market price for metals falls below the Company's full production costs and remains at such levels for any sustained period of time, the Company will experience losses and may decide to discontinue operations or development of other projects or mining at one or more of its properties at that time.

Share consolidation

On September 15, 2021, the Company completed a consolidation of its share capital on a one new for twenty old basis. The share and per share amounts have been adjusted within this MD&A to reflect the share consolidation.

FINANCIAL INSTRUMENTS AND RISK FACTORS

The Company's activities expose it to a variety of financial risks: credit risk, liquidity risk and market risk (including interest rate risk, foreign currency risk and price risk).

Credit risk

Credit risk is the risk of loss associated with a counterparty's inability to fulfill its payment obligations. The Company's credit risk is primarily attributable to cash, amounts receivable and promissory note receivable. Cash is held with a Canadian chartered bank, from which management believes the risk of loss to be minimal.

Amounts receivable consists of sales tax receivable from government authorities in Canada, share subscriptions receivable and amounts due from an arms-length party in relation to exploration and evaluation expenditures. Amounts receivable are in good standing as of June 30, 2022. Management believes that the credit risk with respect to these amounts receivable is minimal.

Liquidity risk

Liquidity risk is the risk that the Company will not have sufficient cash resources to meet its financial obligations as they come due. The Company's liquidity and operating results may be adversely affected if its access to the capital market is hindered, whether as a result of a downturn in stock market conditions generally or matters specific to the Company. The Company generates cash flow primarily from its financing activities. As at June 30, 2022, the Company had cash of $1,980,289 (December 31, 2021 - $2,462,982) to settle trade accounts payable and accrued liabilities of $67,940 (December 31, 2021 - $97,234), the Company's financial liabilities have contractual maturities of less than 30 days and are subject to normal trade terms. The Company regularly evaluates its cash position to ensure preservation and security of capital as well as liquidity. The Company's ability to continually meet its obligations and carry out its planned exploration activities is uncertain and dependent upon the continued financial support of its shareholders and securing additional financing. Management is continuing in its efforts to secure financing and believes it will be successful.

FINANCIAL INSTRUMENTS AND RISK FACTORS (CONTINUED)

Market risk

Market risk is the risk of loss that may arise from changes in market factors such as interest rates and foreign exchange rates.

Interest rate risk

The Company has cash and cash equivalent balances and no variable interest-bearing debt. The Company's current policy is to invest excess cash in guaranteed investment certificates issued by a Canadian chartered bank with which it keeps its bank accounts. The Company periodically monitors the investments it makes and is satisfied with the creditworthiness of its Canadian chartered bank. The Company is not exposed to interest rate risk in respect of any loans payable and received which are subject to fixed rate of interest.

Price risk

The Company is exposed to price risk with respect to equity prices. Equity price risk is defined as the potential adverse impact on the Company's earnings due to movements in individual equity prices or general movements in the level of the stock market. The Company's marketable securities amounting to $40,000 are subject to fair value fluctuations. As at June 30, 2022, if the fair value of the Company's marketable securities had decreased/increased by 10% with all other variables held constant, loss and comprehensive loss for the period ended June 30, 2022 would have been approximately $4,000 higher/lower. Similarly, as at June 30, 2022, reported equity would have been approximately $4,000 lower/higher as a result of a 10% decrease/increase in the fair value of the Company's marketable securities.

Foreign currency risk

The Company's functional and presentation currency is the Canadian dollar and major purchases are transacted in Canadian dollars. The Company at the present time does not have any foreign currency balances subject to foreign currency risk.

Sensitivity analysis

Based on management's knowledge and experience of the financial markets, the Company believes the following movements are reasonably possible over a twelve-month period:

Cash is subject to floating interest rates. The Company has no variable debt and receives low interest rates on its cash and cash equivalents balances. As such, the Company does not have significant interest rate risk.

The Company's financial instruments consist of cash, amounts receivables, promissory note receivable, market securities, accounts payable and accrued liabilities, and promissory notes payable.

The Company has classified fair value measurements of its financial instruments using a fair value hierarchy that reflects the significance of inputs used in making the measurements as follows:

Level 1: Valuation based on quoted prices (unadjusted) in active markets for identical assets or liabilities;
Level 2: Valuations based on directly or indirectly observable inputs in active markets for similar assets or liabilities, other than Level 1 prices, such as quoted interest or currency exchange rates; and
Level 3: Valuations based on significant inputs that are not derived from observable market data, such as discounted cash flow methodologies based on internal cash flow forecasts.

The fair value of the Company's cash is classified as a Level 1 fair value measurement. The Company does not have any Level 2 or 3 fair value measurements.

OFF-BALANCE SHEET ARRANGEMENTS

The information provided in this report, including the consolidated financial statements, is the responsibility of management. In the preparation of these statements, estimates are sometimes necessary to make a determination of future values for certain assets or liabilities. Management believes such estimates have been based on careful judgments and have been properly reflected in the accompanying financial statements. In contrast to the certificate required under National Instrument 52-109 Certificate of Disclosure in Issuers' Annual and Interim Filings ("NI 52-109"), the Venture Issuer Basic Certificate does not include representations relating to the establishment and maintenance of disclosure controls and procedures ("DC&P") and internal control over financial reporting ("ICFR"), as defined in NI 52-109, in particular, the certifying officers filing this certificate are not making any representations relating to the establishment and maintenance of:

(ii) a process to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with the Company's GAAP.

The issuer's certifying officers are responsible for ensuring that processes are in place to provide them with sufficient knowledge to support the representations they are making in this certificate. Investors should be aware that inherent limitations on the ability of certifying officers of a venture issuer to design and implement on a cost-effective basis DC&P and ICFR as defined in NI 52-109 may result in additional risks to the quality, reliability, transparency and timeliness of interim and annual filings and other reports provided under securities legislation.
