NEWS RELEASE

LeenLife Pharma International: Corporate Updates

March 26, 2017

CSE - LLP

Vancouver, B.C. – LeenLife Pharma International Inc. (the “Company”) is pleased to announce the latest developments in the transfer of its of its essential omega-3 fatty acid proprietary technology and the transition of the technology to North America. The Company is assembling a prototype in Poland for delivery to Canada. The new model will incorporate several new features to provide various ingredient combinations to suit customers’ specifications. The prototype will also provide the design for unit production lines. The advantages are that one line can operate while maintenance can be done on another line. Also, it provides additional product enhancements that can be made on one production line without creating costs or delays for the whole production plant.

In conjunction with our expansion to North America, the Company plans to increase its inventory in Poland to provide bulk product shipments. The Company is planning to build production facilities in Canada and the United States but initial supply will come from overseas.

Currently, the Company is setting up sales offices and a distribution warehouse with analytical facilities in Poland. The objective is to offer customers dependable sources of product and various mixtures for inclusion in bread, juice, noodles, meat products, and other food products.

As a result of closing our private placement on February 21, 2017, the Company can focus on its business plan with an emphasis on sales and expansion.

Lastly, we wish to congratulate Elizabeth Liu, a lawyer in Vancouver, Canada and a consultant to the Company on her appointment as Queen’s Counsel. This appointment is a recognition of merit and is only given to a maximum of up to 7% of practicing members of the BC bar association. Along with her experience as the Chief Operating Officer of health food supplement company, she is a valuable member of the team.

About LeenLife

LeenLife has acquired proprietary technology to isolate omega-3 fatty acids from flax seeds. LeenLife products have been developed and prospective sales are proceeding. Sales have been conducted from other entities but not reported directly through LeenLife despite the sales
