CARL DATA CEO SPEAKS ON FUTURE OF EDGE COMPUTING AT INAUGURAL DATA CENTER SUMMIT

October 31, 2018 -Vancouver, British Columbia - Carl Data Solutions Inc. (CSE:CRL, FSE:7C5, OTC:CDTAF) (“Carl Data” or the “Company”) CEO and President, Greg Johnston will be speaking on a panel of edge computing experts at the inaugural Greater Vancouver Data Center Summit, on November 1st.

Life on the Edge: The Advent of 5G, Micro Data Centres & Evolution of the Next Generation will feature experts from the world of data centre efficiency, to discuss the role of data centers for the creation of smart cities and regions by supporting distributed communications networks.

“It was great time to be invited to speak at this event after our acquisition of Astra Earth,” said Greg. “We are rapidly developing technologies to capitalize on our data center assets, while looking at using our core IoT platform to expediate smart city deployments.”

Over 400 senior-level data centre real-estate and technology infrastructure experts from public and private companies are expected to attend, including active developers, investors, capital sources, end-users, public sector executives, engineers and consultants. Speakers at the event will offer comprehensive market analysis of the opportunities and challenges facing data centres.

Register here to attend: [Greater Vancouver Data Center Summit](#)

About Carl Data Solutions Inc.

Carl Data Solutions Inc. is an Industrial IoT (IIoT) company focused on providing next generation information collection, storage and analytics solutions for data-centric companies. Building on its recent acquisitions, Carl helps its clients analyze and understand all forms of environmental data through a powerful platform of data collection, monitoring, reporting, and predictive analysis tools.

Carl Data continues to develop applications to work with new cloud-based mass storage services and analytics tools (Big-Data-as-a-Service (BDaaS) to provide scalability for municipalities, utilities and other industrial verticals. These data collection and storage methods allow the company to build smart Software-as-a-Service (SaaS)-based applications that can collect data from many diverse sources and provide deep insight for decision-making purposes.
